## SISUKORD

Eluruumid ja eluruumidega hooned .....	8
Diagrammid	
Diagramm 1. Eluruumidega hooned liigi järgi, 2000 .....	23
Diagramm 2. Paljukorterilised elamud eluruumide arvu järgi, 2000 .....	23
Diagramm 3. Eluruumid linnades hoone liigi järgi, 2000 .....	24
Diagramm 4. Eluruumid valdades hoone liigi järgi, 2000 .....	24
Diagramm 5. Eluruumid Tallinnas hoone eluruumide arvu järgi, 2000 .....	25
Diagramm 6. Eluruumid linnades ja valdades ehitusaja järgi, 2000 .....	25
Diagramm 7. Eluruumid hoone liigi ja ehitusaja järgi, 2000 .....	26
Diagramm 8. Eluruumid tüübi järgi, 2000 .....	26
Diagramm 9. Eluruumid tüübi ja pinna järgi, 2000 .....	27
Diagramm 10. Eluruumid maakondades pinna järgi, 2000 .....	27
Diagramm 11. Eluruumid Tallinnas pinna järgi, 2000 .....	28
Diagramm 12. Eluruumid tubade arvu järgi, 2000 .....	28
Diagramm 13. Eluruumid ehitusaja ja tubade arvu järgi, 2000 .....	29
Diagramm 14. Eluruumid linnades ja valdades tehnovarustatuse järgi, 2000 .....	29
Teemakaardid	
Teemakaart 1. Eluruumidega hoonete osatähtsus ning jaotus hoone liigi järgi maakondades, 2000 .....	30
Teemakaart 2. Keskmiselt elurume hoones maakondades ning linnades ja valdades, 2000 .....	30
Teemakaart 3. Linnade eluruumide osatähtsus ning jaotus eluruumi tüübi järgi maakondades, 2000 .....	31
Teemakaart 4. Paljukorteriliste elamute eluruumide osatähtsus maakondades, 2000 .....	31
Teemakaart 5. Asustatud eluruumide osatähtsus haldusüksustes, 2000 .....	32
Teemakaart 6. Keskmiselt elanikke asustatud eluruumi kohta haldusüksustes, 2000 .....	33
Teemakaart 7. Asustatud eluruumide keskmine pind elaniku kohta haldusüksustes, 2000 .....	34
Diagrammid .....	35
Teemakaardid .....	36
Tabelid	
Tabel 1. Eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind hoone liigi ning ehitusaja järgi, 2000 .....	40
Tabel 2. Eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind linnades hoone liigi ning ehitusaja järgi, 2000 .....	42
Tabel 3. Eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind valdades hoone liigi ning ehitusaja järgi, 2000 .....	44
Tabel 4. Asustatud eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind, leibkonnad ja elanikud hoone liigi ning ehitusaja järgi, 2000 .....	46
Tabel 5. Asustatud eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind, leibkonnad ja elanikud linnades hoone liigi ning ehitusaja järgi, 2000 .....	50
Tabel 6. Asustatud eluruumidega hooned, eluruumid, eluruumide pind ja keskmine pind, leibkonnad ja elanikud valdades hoone liigi ning ehitusaja järgi, 2000 .....	54
Tabel 7. Asustatud eluruumide pind (m <sup>2</sup> ) hoone asukoha ja liigi järgi, 2000 .....	58
Tabel 8. Eluruumidega hooned ja eluruumid asukoha ja hoone liigi järgi, 2000 .....	60
Tabel 9. Asustatud eluruumidega hooned, eluruumid, leibkonnad ja elanikud hoone asukoha ja liigi järgi, 2000 .....	66
Tabel 10. Eluruumidega hooned asukoha ja ehitusaja järgi, 2000 .....	82
Tabel 11. Eluruumidega hooned asukoha ja ehitusaja järgi, 2000. Paljukorterilised elamud .....	88
Tabel 12. Eluruumidega hooned asukoha ja ehitusaja järgi, 2000. Ühepereelamud ja muud väikeelamud .....	94
Tabel 13. Elamud asukoha ja eluruumide arvu järgi, 2000 .....	100
Tabel 14. Asustatud elamud asukoha ja eluruumide arvu järgi, 2000 .....	106
Tabel 15. Eluruumid asukoha ja hoone ehitusaja järgi, 2000 .....	112
Tabel 16. Asustatud eluruumid asukoha ja hoone ehitusaja järgi, 2000 .....	114
Tabel 17. Eluruumid hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	120
Tabel 18. Eluruumid linnades hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	122

Tabel 19. Eluruumid valdades hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	124
Tabel 20. Asustatud eluruumid hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	126
Tabel 21. Asustatud eluruumid linnades hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	128
Tabel 22. Asustatud eluruumid valdades hoone liigi, ehitusaja ja hoone eluruumide arvu järgi, 2000 .....	130
Tabel 23. Eluruumid elamutes asukoha ja hoone eluruumide arvu järgi, 2000 .....	132
Tabel 24. Asustatud eluruumid elamutes asukoha ja hoone eluruumide arvu järgi, 2000 .....	138
Tabel 25. Eluruumid hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	144
Tabel 26. Eluruumid linnades hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	146
Tabel 27. Eluruumid valdades hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	148
Tabel 28. Asustatud eluruumid hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	150
Tabel 29. Asustatud eluruumid linnades hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	152
Tabel 30. Asustatud eluruumid valdades hoone liigi, tubade arvu ja hoone ehitusaja järgi, 2000 .....	154
Tabel 31. Eluruumid hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	156
Tabel 32. Eluruumid linnades hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	160
Tabel 33. Eluruumid valdades hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	164
Tabel 34. Asustatud eluruumid hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	168
Tabel 35. Asustatud eluruumid linnades hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	172
Tabel 36. Asustatud eluruumid valdades hoone liigi, pinna ja hoone ehitusaja järgi, 2000 .....	176
Tabel 37. Eluruumid asukoha, tüübi ja asustatuse järgi ning asustatud tavaeluruumid leibkondade arvu järgi, 2000 .....	180
Tabel 38. Eluruumid asustatuse ja tüübi järgi, 2000 .....	186
Tabel 39. Eluruumid asukoha ja tüübi järgi, 2000 .....	188
Tabel 40. Asustatud eluruumid, leibkonnad ja elanikud eluruumi asukoha ja tüübi järgi, 2000 .....	194
Tabel 41. Eluruumid tüübi ja pinna järgi, 2000 .....	210
Tabel 42. Asustatud eluruumid tüübi ja pinna järgi, 2000 .....	212
Tabel 43. Eluruumid asukoha ja pinna järgi, 2000 .....	214
Tabel 44. Asustatud eluruumid asukoha ja pinna järgi, 2000 .....	220
Tabel 45. Eluruumid tüübi ja omaniku järgi, 2000 .....	236
Tabel 46. Asustatud eluruumid tüübi ja omaniku järgi, 2000 .....	238
Tabel 47. Eluruumid tubade arvu ja omaniku järgi, 2000 .....	240
Tabel 48. Asustatud eluruumid tubade arvu ja omaniku järgi, 2000 .....	242
Tabel 49. Asustatud eluruumide pind ja keskmine pind eluruumi tüübi ja omaniku järgi, 2000 .....	244
Tabel 50. Asustatud eluruumide pind ja keskmine pind linnades eluruumi tüübi ja omaniku järgi, 2000 .....	246
Tabel 51. Asustatud eluruumide pind ja keskmine pind valdades eluruumi tüübi ja omaniku järgi, 2000 .....	248
Tabel 52. Eluruumid pinna ja omaniku järgi, 2000 .....	250
Tabel 53. Asustatud eluruumid pinna ja omaniku järgi, 2000 .....	252
Tabel 54. Eluruumid asukoha ja omaniku järgi, 2000 .....	254
Tabel 55. Asustatud eluruumid, leibkonnad ja elanikud eluruumi asukoha ja omaniku järgi, 2000 .....	260
Tabel 56. Eluruumid tüübi ja tubade arvu järgi, 2000 .....	272
Tabel 57. Asustatud eluruumid tüübi ja tubade arvu järgi, 2000 .....	274

## ELURUUMID JA ELURUUMIDEGA HOONED

Kogumik avaldab 2000. aasta rahva ja eluruumide loenduse tulemusi eluruumide ja eluruumidega hoonete arvu, liigi, ehitusaja, asustatuse ja pinna suuruse kohta. Käsitletakse ka eluruumide jaotust omaniku, tubade arvu ja tehnovarustatuse järgi. Need tabelid, kus on esitatud hoonetes ja eluruumides alaliselt elavate leibkondade ja elanike arv, on lähedalt seotud järgmise, XI kogumikuga, mis vaatleb rahvastiku ja leibkondade elamis-tingimusi.

2000. aasta rahva ja eluruumide loendusel käsitleti eluruumina eluasemeid, mis olid kavandatud ühele leibkonnale aastaringseks elamiseks ja mida loenduse ajal ei kasutatud tervikuna muudel eesmärkidel peale elamise. Neid elurume nimetati tavaeluruumideks ning nende hulka kuulusid pereelamud, pereelamu osad, korterid ning omaette toad ühiselamu tüüpi majades. Tavaeluruumid loendati olenemata sellest, kas need olid loenduse ajal asustatud või mitte. Peale selle loeti eluruumiks eluse, mis ei olnud alaliseks elamiseks kavandatud, kuid kus loendusmomentil elas alaliselt vähemalt üks isik. Elurume loendati kokku 628 615<sup>1</sup> ja need jagunesid järgmiselt:

- tavaeluruumid — 617 399 (98,2%);
- elamiseks kasutatavad mitteiluruumid ehk mittetavaeluruumid — 1031 (0,2%);
- majutusruumid — 6205 (1,0%).

Eluruumi tüüp jäi teadmata (märkimata) 3980 eluruumi puhul (0,6%). Et elurume iseloomustavaid andmeid (v.a eluruumi tüüp) koguti loendusel ainult tavaeluruumide kohta, siis käsitletakse käesolevas kogumikus edaspidi vaid tavaelurume ja neid sisaldavaid hooned ning termini “eluruum” all mõistetakse edaspidi tavaelurume. Loendatud 617 399 eluruumi jagunesid tüübi järgi nii:

- pereelamu — 171 086 (27,7%);
- osa pereelamust — 16 834 (2,7%);
- korter — 424 768 (68,8%);
- omaette tuba (toad) — 4711 (0,8%).

Eluruumi põhitüübiks oli korter. Valdav enamik elurume (95,8%) oli 2000. aasta alguseks eraomanduses. Linnades oli eluruumidest 65,8% ja valdades 34,2%. Valdade eluruumide osatähtsus oli mõnevõrra suurem kui valdade rahvastiku osatähtsus (32,6%), sest valdades oli linnadega võrreldes oluliselt rohkem mitteasustatud, s.t ilma alaliste elaniketa elurume. Üle 36% eluruumidest oli Harju maakonnas (sh Tallinnas 28%), järgnesid Ida-Viru ja Tartu maakond. Üldiselt vastab maakondadevaheline eluruumide jaotus elanike jaotusele.

Loenduse andmetel oli Eestis 197 694 eluruumidega hoonet, millest enamik (97,5%) olid elamud, s. o hooned, mille pinnast vähemalt poolt kasutati alaliseks elamiseks (tabel A, diagramm 1).

Tabel A. Eluruumidega hooned ja eluruumid hoone liigi järgi, 2000

Hoone liik	Hooned			Eluruumid		
	kokku	linnad	vallad	kokku	linnad	vallad
<b>Arv</b>						
Kõik hoone liigid	197 694	66 368	131 326	617 399	405 962	211 437
Paljukorteriline elamu	21 277	13 884	7 393	421 121	342 110	79 011
Ühepereelamu	162 250	44 452	117 798	166 765	46 759	120 006
Muu väikeelamu	9 156	5 314	3 842	19 743	11 596	8 147
Mitte-elamu	1 639	551	1 088	2 508	956	1 552

Hoone liik teadmata	1,7	3,3	0,9	1,2	1,1	1,3

<sup>1</sup> Institutsioonide (hoolekandetasutused, kinnipidamisasutused jm; loendusmomentil elas nendes alaliselt 12 625 inimest) ruumide arvu loendusel kindlaks ei määratud.

Mitte-elamuid (majutushooned<sup>1</sup>; hooned, mille pinnast kasutati alaliseks elamiseks alla poole jm) oli vaid 0,8%. Hoone liik jäi teadmata 1,7% hoonetest. Eluruumidega hoonete osatähtsust ja hoonete jaotust liigi järgi maakonniti näitab teemakaart 1. Ehkki hoonetest oli suurem osa ühepereelamuid<sup>2</sup>, asus neis kõigist eluruumidest vaid 27%. Enamik (72,6%) ühepereelamuid oli valdades. Ühepereelamute eluruumide osatähtsus oli valdades 56,8% (diagramm 4). Linnades oli see näitaja ligi viis korda väiksem (diagramm 3), Tallinnas enam kui üheksa korda väiksem.

Muud väikeelamud (ridaelamud, kaksikelamud ning pereelamud, kuhu on ehitatud kaks korterit) hõlmasid nii eluruumide kui ka eluruumidega hoonete üldarvust suhteliselt väikese osa. Suurem osa (68,2%) eluruumidest asus paljukorterilistes elamutes, seejuures linnades oli see näitaja üle kahe korra suurem kui valdades. Kõigist paljukorterilistest elamutest asus linnades ligi kaks kolmandikku (65,3%), 20 ja enama korteriga majadest aga 85,8%. Alla 30 korteriga elamutest asus märkimisväärne osa valdades (diagramm 2). 30 ja enama korteriga hoonetest paiknes valdav enamik linnades, seejuures Tallinna elamute osatähtsus oli üldjuhul seda suurem, mida rohkem kortereid hoones oli. 100 ja enama korteriga elamutest asus Tallinnas juba 62,4%.

Eluruumide jaotust linnade ja valdade vahel kajastab diagramm 8, linnade eluruumide osatähtsust ja jaotust eluruumi tüübi järgi

maakondades näitab teemakaart 3. Paljukorteriliste elamute eluruumide osatähtsust maakondades kajastab teemakaart 4.

Hoonete liigitamine hoones asuvate eluruumide arvu järgi (tabel B) on alternatiivne hoonete liigitamise viis, mis võimaldab detailsemalt jagada paljukorterilisi elamuid ning ühtlasi liigitada ka need hooned ja eluruumid, mille liik on tabeli A jaotuses teadmata. Väiksema eluruumide arvuga hoonete puhul need kaks liigitusviisi ei kattu, sest näiteks 7–8 eluruumi võib olla nii ridaelamus kui ka paljukorterilises elamus. Tabelist näeme, et olulised erinevused hoonete, eriti aga eluruumide jaotuses ei olnud ainult linnade ja valdade, vaid ka Tallinna ja teiste linnade vahel. Nii asus Tallinna eluruumidest ligi veerand 100 või enama korteriga elamutes, teistes linnades oli see näitaja alla 10%. Samal ajal asus Tallinnas teiste linnadega võrreldes märgatavalt vähem eluruume 1–2 eluruumiga hoonetes (Tallinnas 8,3%, teistes linnades 18,5%). Kuigi tervikuna iseloomustas Tallinna suurelamute eluruumide suur osatähtsus, olid erinevused Tallinna linnaosade vahel äärmiselt suured (diagramm 5) — keskmine eluruumide arv hoones varieerus 1,2-st Pirita linnaosas 64,6-ni Mustamäe linnaosas. Nimetatud näitaja varieerumist maakondades, nende linnades ja valdades illustreerib teemakaart 2. Märkimisväärselt olulised territoriaalsed erinevused majade suuruses tekkisid intensiivse massehituse ajal 60-ndatest kuni 90-ndate aastateni.

Tabel B. Eluruumidega hooned ja eluruumid hoone eluruumide arvu järgi, 2000 (protsenti)

Eluruumide arv hoones	Hooned				Eluruumid			
	kokku	Tallinn	teised linnad	vallad	kokku	Tallinn	teised linnad	vallad
Kõik hooned	100,0	100,0	100,0	100,0	100,0	100,0	100,0	100,0
1–2	88,0	67,8	80,2	93,6	30,0	8,3	18,5	60,5
3–19	9,3	21,4	14,4	5,8	22,1	16,4	21,0	28,1
20–49	1,4	4,3	2,8	0,5	14,4	15,0	19,6	8,1
50–99	1,1	4,9	2,2	0,1	23,0	35,9	31,4	3,2
100+	0,2	1,6	0,4	0,0	10,5	24,4	9,5	0,1

Olulisemaid elamufondi iseloomustajaid on hoonete vanus. Hoone ehitusaja andmed koos hoone liigi ja eluruumide tunnustega annavad ülevaate asulate arengust ja ehitusintensiivsusest eri perioodidel eri piirkondades. Hoonete ehitusperiood märgiti

rahvusvahelise klassifikatsiooni alusel. Paraku saadi loendusel kõige puudulikumat andmed just hoone ehitusaja kohta, sest ilmnes, et elanikud hoone ehitusaega sageli ei tea. Hoolimata hilisemast andmete korrigeerimisest<sup>3</sup>, jäi ehitusaeg

<sup>1</sup> Need majutushooned, kus on eluruume.

<sup>2</sup> “Ühepereelamu” mõiste erineb mõistest “pereelamu”, mis tähistab eluruumi tüüpi. Kui eluruumi tüüp “pereelamu” hõlmab ka ridaelamuboksi ja kaksikelamuboksi, siis hoone liik “ühepereelamu” hõlmab ainult korteriteks jaotamata ühepereelamut.

<sup>3</sup> Loenduse andmeid täiendati kõigepealt Hooneregistri andmetega. Seejärel loeti paljukorterilistes elamutes ehitusajaks see ehitusperiood, mille kohta oli antud vähemalt kolm neljandikku vastustest.

teadmata 9,2% eluruumidega hoonetest ja 6,2% eluruumidest. Seetõttu saab ehitusaja andmeid kasutada pigem üldiste tendentside jälgimiseks. Elamufondi vanusstruktuur 2000. aasta rahvaloenduse ajal siiski ühel või teisel perioodil ehitatud eluruumide arvu ei kajasta, sest osa eluruume on aja jooksul kohandatud mitteeluruumideks ja vastupidi (nt osa suvilaid on ehitatud ümber aastaringseks elamiseks mõeldud elamuteks).

Enam kui viiendik teadaoleva ehitusajaga eluruumidest on ehitatud enne 1946. aastat (tabel C). 63%<sup>1</sup> eluruumidest ehitati intensiivse massehituse perioodil aastatel 1961–1990. Uusi, 90-ndatel aastatel ehitatud eluruume on elamufondis vähe — koos pooleliolevates ehitistes<sup>2</sup> paiknevate eluruumidega alla 5%. Valdade elamufond on linnade elamufondist vanem — enne 1946. aastat on ehitatud valdade eluruumidest 39% ning linnade eluruumidest 13%.

Elamufondi vanusstruktuur linnades ja valdades peegeldab üldiselt rahvastiku paiknemist linnades ja valdades eri perioodidel. Enne II maailmasõda, kui enamik rahvastikust elas valdades, ehitati sinna ka suurem osa eluruumidest (diagramm 6). Majandustegevuse järjest suurenev koondumine linnadesse ning immigratsiooni järsk kasv pärast sõda tõid

kaasa vajaduse oluliselt laiendada elamuehitust linnades. Nii paiknebki 76% aastatel 1961–1990 ehitatud eluruumidest linnades. 90-ndatel aastatel, kui elamuehitus oluliselt vähenes, kahanes suuresti linna ehitatud eluruumide osatähtsus (tabel D).

**Tabel C. Eluruumid ehitusaja ja hoone liigi järgi, 2000**

(osatähtsus teadaoleva ehitusajaga eluruumide hulgas, %)

Ehitusaeg	Kõik hoone liigid	Palju-korteriline elamu	Ühepereelamu ja muu väikeelamu
Kõik eluruumid	100,0	100,0	100,0
Enne 1919	8,4	4,3	17,3
1919–1945	13,5	5,5	31,5
1946–1960	10,2	8,2	14,8
1961–1970	20,4	24,3	11,6
1971–1980	22,2	28,3	8,7
1981–1990	20,4	26,2	7,4
1991–1995	2,9	2,8	3,0
1996 või hiljem	1,1	0,3	3,0
Ehitus pooleli	0,9	0,1	2,7

**Tabel D. Eluruumidega hoonete ja eluruumide näitajaid hoone ehitusaja järgi, 2000**

Ehitusaeg	Keskmiselt eluruume hoones	Keskmiselt eluruume paljukorterilises elamus	Paljukorteriliste elamute eluruumide osatähtsus, %	Linnade eluruumide osatähtsus, %
Kokku <sup>3</sup>	3,1	19,8	68,2	65,8
Enne 1919	1,6	6,3	35,7	41,6
1919–1945	1,4	6,5	28,3	40,9
1946–1960	2,2	10,9	55,5	70,9
1961–1970	5,3	25,5	82,6	78,1
1971–1980	7,7	35,8	88,2	76,7
1981–1990	8,2	38,3	89,0	72,7
1991–1995	3,3	30,4	68,8	66,9
1996 või hiljem	1,4	18,0	20,6	54,2

Paljukorteriliste elamute ja väikeelamute (ühepereelamud, kaksikelamud, ridaelamud) vanusstruktuur ning nende osatähtsus eri perioodidel on küllalt erinev (tabel C ja D, diagramm 7). Väikeelamute eluruumidest on enne 1961. aastat ehitatud üle 63%, paljukorteriliste elamute eluruumidest vaid 18%. Suurem osa — 79% — paljukorteriliste elamute eluruumidest ehitati aastatel 1961–1990. Järelikult on

väikeelamute elamufond paljukorteriliste elamute elamufondist keskmiselt oluliselt vanem.

Aastatel 1961–1990 kasvas pidevalt keskmine eluruumide arv paljukorterilistes elamutes ning sellega ka üldine suhtenäitaja — keskmine eluruumide arv hoones (tabel D). Järsud muutused elamuehituse struktuuris viisid 90-ndate aastate teisel poolel viimase näitaja perioodi 1919–1945 tasemele.

<sup>1</sup> Ehitusaja suhtarvudes on arvestatud vaid teadaoleva ehitusajaga eluruume.

<sup>2</sup> Vastus “pooleliolev ehitus” märgiti juhtumitel, kui hoone mõnda ruumi juba kasutati alaliseks elamiseks, kuid kohalik omavalitsus ei olnud kasutusluba veel andnud.

<sup>3</sup> Arvestatud on ka pooleliolevates ehitistes ning teadmata ehitusajaga hoonetes asuvaid eluruume.

Eluruumide pinna suurust iseloomustavad järgmised põhiarvud.

- Kõigi eluruumide teadaolev pind oli 35,8 miljonit ruutmeetrit. Pind jäi teadmata 2,1% eluruumidest.
- Asustatud eluruumide teadaolev pind oli 31,9 miljonit ruutmeetrit<sup>1</sup>.
- Eluruumi keskmine pind oli 59,3 ruutmeetrit, asustatud eluruumidel 59,6 ruutmeetrit.
- Asustatud eluruumides oli keskmine pind elaniku kohta 24,0 ruutmeetrit<sup>2</sup>.

Rohkem kui 60% eluruumide pind oli vahemikus 40–79 ruutmeetrit. Eramute eluruumide (pereelamud või nende osad) pind jaotus võrreldes korteritega ühtlasemalt ning nende pinnadiapasoon oli laiem (diagramm 9). Korterite jaotus pinna järgi peegeldab suurel määral tüüpprojektide järgi ehitatud korterite standardseid suurusi. Erinevusi eluruumide jaotuses pinna järgi maakondades illustreerib diagramm 10 ja Tallinna linnaosades diagramm 11.

Tabel E. Eluruumi keskmine pind ja tubade arv hoone liigi järgi, 2000

Hoone liik	Kokku	Linnad	Vallad
<b>Eluruumi keskmine pind, m<sup>2</sup></b>			
Kõik hoone liigid <sup>3</sup>	59,3	54,0	69,8
Paljukorteriline elamu	49,7	49,0	53,1
Ühepereelamu	83,5	87,1	82,0
Muu väikeelamu	70,4	70,4	70,3
Mitte-elamu	47,6	46,5	48,3
<b>Keskmine tubade arv eluruumis</b>			
Kõik hoone liigid <sup>3</sup>	2,6	2,4	3,0
Paljukorteriline elamu	2,3	2,2	2,4
Ühepereelamu	3,5	3,9	3,3
Muu väikeelamu	3,1	3,1	3,0
Mitte-elamu	2,1	2,1	2,1

Tabel F. Eluruumi keskmine pind ja tubade arv hoone ehitusaja järgi, 2000

	Kokku <sup>4</sup>	Enne 1919	1919–1945	1946–1960	1961–1970	1971–1980	1981–1990	1991–1995	1996 või hiljem
Eluruumi keskmine pind, m <sup>2</sup>	59,3	63,2	66,7	58,8	49,1	55,6	60,2	80,3	124,0
Keskmine tubade arv eluruumis	2,6	2,6	2,9	2,7	2,4	2,5	2,6	3,1	4,1

Eluruumide jaotus tubade arvu järgi on pinna kõrval teine võimalus iseloomustada eluruumi suurust. Tubade arvu inimese kohta vaadeldakse kui privaatsuse näitajat, seda aspekti eluruumi pind

Tingituna eelkõige ühepereelamute eluruumide suurest osatähtsusest valdades oli eluruumi keskmine pind valdades märgatavalt suurem kui linnades, vastavalt 69,8 ja 54,0 ruutmeetrit (tabel E). Samas oli valla keskmine ühepereelamu mõnevõrra väiksem kui linnas. Paljukorteriliste elamute eluruumide puhul oli vastupidi — valdades oli korter keskmiselt suurem kui linnas.

Eluruumi keskmine pind maakondades oli üsna erinev — alates 51,7 ruutmeetrist Ida-Virumaal 72,3 ruutmeetri Hiiumaal. Need erinevused seonduvad eelkõige paljukorteriliste elamute ja väikeelamute erineva osatähtsusega maakondades, kuid ka ühe ja sama hoone liigi keskmine pind varieerus maakonniti märgatavalt. Näiteks oli ühepereelamu keskmine pind Harju maakonnas 91 ruutmeetrit (sh Tallinnas 96 ruutmeetrit), Saare maakonnas aga 75 ruutmeetrit. Asustatud eluruumide keskmist pinda elaniku kohta haldusüksustes näitab teemakaart 7.

Eluruumide keskmise pinna andmed peegeldavad paljukorteriliste elamute ja väikeelamute eluruumide erinevat osatähtsust eri perioodidel ning muutusi eri liiki eluruumide suuruses. Eluruumi keskmine pind on väikseim aastatel 1961–1970 ehitatud hoonetes (tabel F). Sellel ajal oli paljukorteriliste elamute eluruumide osatähtsus juba üle 80% ja nende keskmine pind väikseim (43,7 ruutmeetrit). Järgmistel aastatel küll paljukorteriliste elamute eluruumide osatähtsus mõnevõrra suurenes, kuid kasvas ka korterite keskmine pind. Pärast taasiseseisvumist, kui kaotati seni kohustuslikud ehitusnormid, hakkas eluruumide pind oluliselt suurenema, eriti eramutes. Keskmise pinna suurenemine 90-ndatel aastatel ehitatud eluruumides ongi põhiliselt tingitud eramute oluliselt suurenenud osatähtsusest ning nende keskmise pinna suurenemisest.

ei iseloomusta. Loenduse andmetel oli ühes eluruumis keskmiselt 2,61 tuba, asustatud eluruumis 2,64 tuba. Asustatud eluruumides oli elaniku kohta keskmiselt 1,06 tuba.

<sup>1</sup> Pind jäi teadmata 0,5% asustatud eluruumidest ja 12,9% mitteasustatud eluruumidest.

<sup>2</sup> Arvutatuna teadaoleva pinnaga eluruumides elavate elanike kohta.

<sup>3</sup> Arvestatud on ka eluruumid, mille hoone liik on teadmata.

<sup>4</sup> Arvestatud on ka pooleliiolevates ehitistes ning teadmata ehitusajaga hoonetes asuvaid eluruumid.

Tabel G. Eluruumid tubade arvu järgi, 2000

Tubade arv	Kokku	%	Linnad	%	sh Tallinn	%	Vallad	%
Kõik eluruumid	617 399	100,0	405 962	100,0	172 753	100,0	211 437	100,0
1 toaga	91 955	14,9	72 606	17,9	33 836	19,6	19 349	9,2
2 toaga	219 530	35,6	162 576	40,1	68 793	39,8	56 954	26,9
3 toaga	188 508	30,5	115 073	28,3	50 956	29,5	73 435	34,7
4 toaga	65 339	10,6	33 323	8,2	11 266	6,5	32 016	15,1
5 toaga	26 420	4,3	12 277	3,0	3 744	2,2	14 143	6,7
6 või enama toaga	13 831	2,2	6 283	1,6	2 063	1,2	7 548	3,6
Teadmata	11 816	1,9	3 824	0,9	2 095	1,2	7 992	3,8

Kõige enam oli kahe ja kolme toaga eluruumid (tabel G, diagramm 12). Nelja ja viie toaga eluruumid oli kokku umbes niisama palju kui ühetoalisi (15%), kuue ja enama toaga eluruumid oli vaid veidi üle 2%. Paljukorterilistes elamutes olid peamiselt (üle 92%) ühe kuni kolme toaga eluruumid, rohkem kui pooles ühepereelamutes oli kolm või neli tuba. Keskmise tubade arv eri liiki hoonetes (tabel E) iseloomustab üldiselt samu tendentse, mida vastavad keskmise pinna andmed. On ju pinna suurus ja tubade arv üldjuhul enam-vähem vastavuses — suuremal pinnal paikneb rohkem tube ja vastupidi. Näeme, et valla keskmine ühepereelamu on linna elamust väiksem ka tubade arvult, valla keskmine korter paljukorterilises elamust seevastu mõnevõrra suurem. Keskmise tubade arvu ja keskmise pinna muutused toimusid erineval ehitusajal sünkroonselt (tabel F). Väikeste, ühe ja kahe toaga eluruumide osatähtsus oli suurim aastatel 1961–1970 ehitatud majades (diagramm 13). Kahe toaga eluruumid hõlmasid sel perioodil ehitatud eluruumidest 51% ning ühe ja kahe toaga ruumid kokku ligi 63%. Järgmistel perioodidel vähenes pidevalt kahe toaga eluruumide osatähtsus ning 70-ndatel ja 80-ndatel aastatel suurenes kolme

toaga eluruumide osatähtsus. Üheksakümnendaid aastaid iseloomustas nelja või enama toaga eluruumide kiiresti kasvanud osatähtsus. 1996. aastal ja hiljem ehitatud eluruumidest oli nelja või enama toaga juba üle 60%.

Olmemugavuste olemasolu eluruumides kajastab tabel H. Nagu mitmete teiste eluruumide ja hoonete tunnuste puhul olid ka eluruumide tehnovarustatuses linnades ja valdades suured erinevused (diagramm 14). Linnades oli valdadega võrreldes 2,3 korda rohkem keskkütte või elekterküttega eluruumid, umbes kaks korda rohkem veeklosetiga ja sooja veega eluruumid, 1,6 korda rohkem veevärgi ja kanalisatsiooniga eluruumid. Kuigi saunaga eluruumid<sup>1</sup> on valdades tunduvalt rohkem, on pesemisvõimalused linnas siiski paremad, sest eluruumid, kus on kas vann, dušikabiin või saun, on linnas enam. Linnade eluruumide parem tehnovarustatus ilmneb ka eluruumitüübiti: linnade eramud on keskmiselt parema tehnovarustusega kui valdade eramud, sama kehtib linnade korterite ja omaette tubade kohta. Hajaasustuse tõttu on maal olnud raskem tehnovõrke rajada. Neid rajati eelkõige suurematesse asulatesse.

Tabel H. Eluruumid tehnovarustuse ja tüübi järgi, 2000  
(osatähtsus teadaoleva tehnovarustusega eluruumide hulgas, %)

Tehnovarustuse liik	Kõik eluruumid			Pereelamu või selle osa			Korter või omaette tuba		
	kokku	linnad	vallad	kokku	linnad	vallad	kokku	linnad	vallad
Köök (kõöginišš)	98,8	98,4	99,6	99,7	99,6	99,7	98,5	98,2	99,5
Veevärk	83,2	94,6	60,4	53,5	79,1	41,4	95,5	97,2	88,5
Kanalisatsioon	81,5	92,9	58,8	48,6	68,7	39,1	95,2	97,0	87,9
Soe vesi	64,9	78,4	38,0	33,5	49,2	26,0	78,0	83,2	55,8
Vann (dušš)	68,7	81,4	43,2	29,5	45,2	22,0	84,9	87,4	74,4
Saun	16,9	7,9	34,7	54,5	49,7	56,7	1,3	1,0	2,6
Veeklosett	73,2	87,4	44,8	29,9	48,9	20,9	91,1	93,8	79,7
Gaas	40,0	44,6	30,9	31,5	29,1	32,6	43,5	47,1	28,3
Keskküte	60,4	76,6	28,2	16,8	26,9	12,0	78,5	84,8	52,0
Elekterküte	5,4	4,7	6,7	7,7	13,8	4,7	4,5	3,2	9,7

<sup>1</sup> Arvestatud pole paljukorteriliste elamute keldrisse ehitatud ühissaunu.

Eestis tervikuna on korterite keskmine tehnovarustuse tase tunduvalt kõrgem kui eramutel. Mitme tehnovarustuse liigi puhul on korterite teatud tehnovarustuse tase saavutatud mitukümmend aastat varem kui eramutel. Näiteks oli veevärk 69% enne 1919. aastat ehitatud korteritest, eramutes jõuti sama näitajani aastatel 1961–1970. Nimetatud mahajäämuse üheks põhjuseks on asjaolu, et suurem osa eramutest asub maal, kus tehnovõrke on suhteliselt vähem. Et peale selle on eramute elamufond korterite elamufondist oluliselt vanem, ongi eramute tehnovarustatus suhteliselt halb. Paari viimasel aastakümnel ehitatud majades on erinevused eramute ja korterelamute tehnovarustatuses siiski pidevalt vähenenud ning 90-ndatel aastatel ehitatud eramud ei jää olmemugavustelt korterelamutele oluliselt alla.

2000. aastaks, kui toimus loendus, oli põhilisel lõpule jõudnud nii eluruumide erastamine kui ka tagastamine omanikele või nende pärijatele. Valdav osa eluruumidest oli selleks ajaks eraomanduses, mida näitab järgmine eluruumide jaotus<sup>1</sup>:

- avalik sektor — 4,2%  
sh riik — 0,7%  
kohalik omavalitsus — 3,5%
- erasektor — 95,8%  
sh eraisik — 90,5%  
elamuühistu — 4,1%  
muu omanik — 1,2%

Avaliku sektori eluruumide osatähtsus linnades ja valdades tervikuna oluliselt ei erinenud, suuremad erinevused ilmnisid maakonniti. Kõige rohkem oli avaliku sektori eluruume Ida-Viru (8%), kõige vähem Hiiu ja Saare maakonnas (2%). Avalikule sektorile kuulus üle 24 600 eluruumi, neist 82% olid korterid ja 12% ühiselamu tüüpi majade isoleeritud toad. Viimati nimetatud tüüpi eluruumide suhteliselt suur osatähtsus oli iseloomulik just avalikule sektorile. Erasektori eluruumidest oli seda tüüpi eluruume alla 0,3%. Asustatud eluruume oli avaliku sektori eluruumide hulgas vähem (82,3%) kui erasektori eluruumide hulgas (90,7%).

Tabel J. Eluruumid tüübi ja asustatuse järgi, 2000

Eluruumi tüüp	Kõik eluruumid	%	Asustatud	%	Reserveeritud	%	Asustamata	%	Asustatus teadmata	%
Kõik eluruumid	617 399	100,0	537 907	100,0	29 043	100,0	37 438	100,0	13 011	100,0
Pereelamu	171 086	27,7	133 595	24,8	19 932	68,6	14 639	39,1	2 920	22,4
Osa pereelamust	16 834	2,7	15 025	2,8	635	2,2	1 004	2,7	170	1,3
Korter	424 768	68,8	385 796	71,7	8 169	28,1	21 155	56,5	9 648	74,2
Omaette tuba (toad)	4 711	0,8	3491	0,7	307	1,1	640	1,7	273	2,1

<sup>1</sup> Siin ja edaspidi on protsendid arvatud teadaoleva omanikuga eluruumide suhtes. Omanik jäi teadmata 5,2% kõigist eluruumidest ja 1,7% asustatud eluruumidest.

Erasektoriga võrreldes oli avaliku sektori eluruumides keskmiselt vähem tube (tabel I).

Tabel I. Eluruumid tubade arvu ja omaniku järgi, 2000 (protsenti)

Tubade arv	Riik	Kohalik omavalitsus	Erasektor
Kõik eluruumid	100,0	100,0	100,0
1 toaga	42,7	40,2	13,3
2 toaga	30,9	38,2	35,6
3 või enama toaga	24,9	19,6	50,0
Teadmata	1,5	2,0	1,1

Riigile kuuluvate eluruumide keskmine pind oli 41,8 ja kohalikule omavalitsusele kuuluvate eluruumide pind 39,7 ruutmeetrit. Eraisikule kuuluvate eluruumide sama näitav oli 61,0. Olmemugavusi on avaliku sektori eluruumidel vähem kui erasektori ruumidel — oluliselt vähem on neis sooja vee, vanni (dušiga) ning saunaga eluruume. Et ühiselamutubade osatähtsus on avaliku sektori eluruumide hulgas suhteliselt suur, on neis rohkem eluruume, kus puudub köök või kööginõus.

Eluruumidest 87,1% oli asustatud, s.t neis elas vähemalt üks alaline elanik (tabel J). Eelmisel, 1989. aasta rahvaloendusel koguti andmeid vaid asustatud eluruumide kohta. Et eluruumi tüüpide määratlus oli kahe loenduse puhul mõnevõrra erinev, ei ole eluruumide üldarv võrreldav. Näiteks 1989. aastal märgiti vastus “osa individuaalmajast” siis, kui kodanikule kuuluvas majas elas kaks või rohkem perekonda (või üksikisikut). 2000. aastal märgiti analoogne vastus “osa pereelamust” siis, kui pereelamu oli jaotatud mitmeks iseseisvaks eluruumiks, kus olid eraldi sissepääsud ja abiruumid või ainult eraldi köögid. Nii saadi 1989. aastal vastuseid “osa individuaalmajast” oluliselt rohkem kui analoogset vastust 2000. aastal (1989. a — 26 635 eluruumi; 2000. a — 15 025). Peamiselt selle erinevuse tõttu oli asustatud eluruumide üldarv 1989. aastal (544 922 eluruumi) 7015 võrra suurem kui 2000. aastal.

Asustatud eluruumide osatähtsus oli 2000. aastal linnades oluliselt suurem kui valdades (tabel K).

**Tabel K. Asustatud eluruumide osatähtsus eluruumi tüübi järgi, 2000**  
(protsenti)

Eluruumi tüüp	Kokku	Linnad	sh Tallinn	Vallad
Kõik eluruumid	87,1	91,7	92,8	78,3
Pereelamu või selle osa	79,1	90,3	93,5	74,0
Korter või omaette tuba (toad)	90,6	92,0	92,7	85,0

Viies suuremas linnas (Tallinn, Tartu, Narva, Kohtla-Järve, Pärnu) oli asustatud eluruume üle 90%. Väikelinnades varieerus asustatud eluruumide osatähtsus laiemas vahemikus, kõige vähem oli neid Narva-Jõesuus (70,7%), Mustvees (78,9%) ja Kallastel (80,8%). Veelgi suuremates piirides kõikus asustatud eluruumide osatähtsus valdades (teemakaart 5). Näiteks Tallinna ümbritsevates valdades (v.a Jõelähtme) oli asustatud eluruume üle 90%, viies Eesti vallas oli neid alla poole. Aktiivsema majandustegevusega piirkondades ja

nende läheduses oli asustatud eluruumide osatähtsus sageli suurem. Peale vähenenud majandustegevuse põhjustasid mõnes piirkonnas eluruumide tühjaksjäämise endise Nõukogude Liidu sõjaväe lahkumine, väljaränne ja muud tegurid. Keskmist elanike arvu asustatud eluruumi kohta haldusüksustes kajastab teemakaart 6.

Paljusid mitteasustatud eluruume kasutati hooajaliselt või ajutiselt (reserveeritud eluruumid). Neist suurema osa (71%) hõlmasid pereelamud või pereelamu osad. Siia kuulusid näiteks tühjaksjäänud talumajad maal, samuti endised suvilad, mis on ümber ehitatud aastaringseks elamiseks, kuid mida kasutati siiski vaid hooajaliselt. Aasta ringi tühjalt seisvate ehk asustamata eluruumide hulgas oli rohkem kortereid ja omaette tube (58%). Asustatud eluruumidega võrreldes olid reserveeritud ja asustamata eluruumid keskmiselt vanemad ja madalama tehnovarustatuse tasemega. Tubade arvu poolest olid reserveeritud, eriti aga asustamata eluruumid asustatud eluruumidest keskmiselt väiksemad — nende hulgas oli protsentides rohkem ühe toaga ja vähem kolme või enama toaga eluruume.

## DWELLINGS AND BULDINGS CONTAINING DWELLINGS

The publication contains the results of the 2000 Population and Housing Census by number of dwellings and buildings containing dwellings, type of building and dwelling, time of construction, occupancy, and area of dwellings. In addition, it deals with the distribution of dwellings by owner, number of rooms and comfort characteristics. The tables, which present the number of households and inhabitants permanently living in buildings and dwellings, are closely linked with the next XI volume, which observes the living conditions of the population and households.

In the 2000 Census, living quarters, which had been designed for one household for all-the-year-round habitation and which as a whole were not used for any other purpose than for living, were considered dwellings. These dwellings were called conventional dwellings and they comprised one-family dwellings, parts of family dwellings, apartments and separate living rooms in hostel-type houses. All conventional dwellings were enumerated regardless of whether any people lived there or not at the Census moment. Also, living quarters, which had not been designed for permanent habitation but which at the Census moment were the permanent place of residence of at least one person were considered as dwellings. The 2000 Census enumerated a total of 628,615<sup>1</sup> dwellings and their distribution was the following:

- conventional dwellings — 617,399 (98.2%);
- non-conventional dwellings (non-dwelling used for habitation) — 1,031 (0.2%);
- accommodation rooms — 6,205 (1.0%).

The type of dwelling of 3,980 (0.6%) dwellings remained unknown (not recorded). As data on dwellings (except the type of dwelling) collected in the Census refer only to conventional dwellings, the current publication deals only with conventional dwellings and buildings containing these dwellings, consequently, hereinafter the term “dwelling” denotes conventional dwellings. The distribution of 617,399 enumerated dwellings by type was the following:

- family-dwelling — 171,086 (27.7%);
- part of family dwelling — 16,834 (2.7%);
- apartment — 424,768 (68.8%);
- separate living room(s) — 4,711 (0.8%).

The main type of dwelling was apartment. Large majority (95.8%) of dwellings was in private ownership at the beginning of 2000. 65.8% of dwellings were located in cities and 34.2% in rural municipalities. The proportion of dwellings in rural municipalities was slightly larger than that of population (32.6%), as in rural municipalities there were relatively more unoccupied (without permanent inhabitants) dwellings than in cities. Over 36% of dwellings were in Harju county (incl. 28% in Tallinn), next came Ida-Viru and Tartu counties. In general, the proportion of dwellings in different counties corresponds to that of the population in respective counties.

According to the Census data, there were 197,694 buildings containing dwellings in Estonia, of which the majority (97.5%) were residential buildings, i.e. buildings of which at least half of the floor area was used for permanent habitation (Table A, Diagram 1). Non-residential buildings (accommodation buildings<sup>2</sup>; buildings of which less than half of the area was used for permanent habitation, etc.) accounted for only 0.8% of all buildings. The type of building remained unknown in the case of 1.7%. Thematic map 1 shows the proportion of buildings containing dwellings and their distribution by type of building in counties. Although most of the buildings were one-family houses<sup>3</sup>, they contained only 27% of all dwellings. The majority (72.6%) of one-family houses were located in rural municipalities. The proportion of dwellings in one-family houses was 56.8% in rural municipalities (Diagram 4). In cities, the same figure was nearly five times smaller (Diagram 3), and in Tallinn more than nine times smaller.

Other small residential buildings (row houses, semi-detached houses and family houses containing two apartments) accounted for a relatively small proportion of the total number of both dwellings and buildings containing dwellings. Larger proportion of dwellings (68.2%) was located in apartment buildings, this figure being more than twice larger for cities than for rural municipalities.

<sup>1</sup> The rooms in institutions (welfare, penal institutions, etc. which provided permanent accommodation to 12,625 persons at the moment of Census) were not enumerated in the Census.

<sup>2</sup> Accommodation buildings containing dwellings.

<sup>3</sup> The concept of “one-family house” differs in content from the concept of “family dwelling”, which denotes the type of dwelling. If the type of dwelling “family dwelling” comprises also housing units of row houses and semi-detached houses, then one-family house as a type of building refers only to one-family house which is not divided into apartments.

**Table A. Buildings containing dwellings and dwellings by type of building, 2000**

Type of building	Buildings			Dwellings		
	total	cities	rural municipalities	total	cities	rural municipalities
<b>Number</b>						
All types of buildings	197 694	66 368	131 326	617 399	405 962	211 437
Apartment building	21 277	13 884	7 393	421 121	342 110	79 011

Type of building unknown	3 372	2 167	1 205	7 262	4 541	2 721
<b>Percentage</b>						
All types of buildings	100.0	100.0	100.0	100.0	100.0	100.0
Apartment building	10.8	20.9	5.7	68.2	84.3	37.4
One-family house	82.1	67.0	89.7	27.0	11.5	56.8
Other small residential building	4.6	8.0	2.9	3.2	2.9	3.8
Non-residential building	0.8	0.8	0.8	0.4	0.2	0.7
Type of building unknown	1.7	3.3	0.9	1.2	1.1	1.3

Of all apartment buildings, nearly two-thirds (65.3%) and of buildings with 20 and more apartments, already 85.8% were located in cities. Of buildings containing fewer than 30 apartments, a considerable proportion was in rural municipalities (Diagram 2). Of buildings with 30 and more apartments, the prevailing majority was in cities and, as a rule, the proportion of dwellings locating in Tallinn was larger when the number of apartments in the building was bigger. Of buildings with 100 and more apartments, already 62.4% were in Tallinn.

Diagram 8 reflects the distribution of dwellings between cities and rural municipalities, and thematic map 3 shows the percentage and distribution of dwellings locating in cities by type of the dwelling in counties. Thematic map 4 reflects the percentage of dwellings of apartment buildings by counties.

Classification of buildings by number of dwellings in the building (Table B) is an alternative method of classifying buildings. It provides a more detailed distribution of apartment buildings, and it also allows to classify those buildings and dwellings the type of which was unknown according to the distribution used in Table A. In the case of buildings containing a smaller number of dwellings

those two classification methods do not coincide as, for example, both row houses and apartment buildings can contain 7 to 8 dwellings. We can see from the table that there are significant differences in the distribution of buildings but especially of dwellings not only between cities and rural municipalities but also between Tallinn and other cities. Thus, almost a quarter of dwellings in Tallinn were in buildings containing 100 or more apartments, for other cities this indicator was below 10%. At the same time, the proportion of dwellings locating in buildings with 1 to 2 dwellings was considerably smaller in Tallinn compared to other cities (8.3% and 18.5%, respectively). Though a high proportion of dwellings locating in apartment houses is characteristic of Tallinn as a whole, there are extremely great differences between different city districts (Diagram 5) — the average number of dwellings in the building ranging from 1.2 in Pirita city district to 64.6 in Mustamäe city district. Thematic map 2 illustrates the variation of this indicator in counties, cities and rural municipalities. Remarkably great territorial differences in the size of buildings emerged at the time of the intensive construction period from the 1960s until 1990s.

**Table B. Buildings containing dwellings and dwellings by number of dwellings in the building, 2000 (%)**

Number of dwellings in the building	Buildings				Dwellings			
	total	Tallinn	other cities	rural municipalities	total	Tallinn	other cities	rural municipalities
All buildings	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1–2	88.0	67.8	80.2	93.6	30.0	8.3	18.5	60.5
3–19	9.3	21.4	14.4	5.8	22.1	16.4	21.0	28.1
20–49	1.4	4.3	2.8	0.5	14.4	15.0	19.6	8.1
50–99	1.1	4.9	2.2	0.1	23.0	35.9	31.4	3.2
100+	0.2	1.6	0.4	0.0	10.5	24.4	9.5	0.1

One of the most important characteristics of the dwelling stock is the time of construction of the building. Data on the time of construction of the building together with the type of building and characteristics of dwellings give an overview of the development of settlements and intensity of construction activity at different times in different regions. The period of construction of buildings was recorded according to an international classification. Unfortunately, it appeared that the data on the time of construction of the building collected in the Census were by far the most incomplete, inhabitants very often did not know the time of construction of the building. Despite of the later adjustment<sup>1</sup> of the data, the time of construction of the building remained unknown in the case of 9.2% of buildings containing dwellings and in the case of 6.2% of dwellings. Therefore, the data on the time of construction could rather be used for observing general trends. The age structure of the dwelling stock as at the time of the 2000 Census does not reflect the number of dwellings built in different periods, as over the years a number of dwellings have been converted into non-dwellings and vice versa (e.g., some summer cottages have been rebuilt to allow all-the-year-round habitation).

More than one fifth of dwellings with known time of construction had been built before 1946 (Table C). 63%<sup>2</sup> of dwellings had been completed during the intensive mass-construction period from 1961 to 1990. The dwelling stock includes relatively few new dwellings, i.e. those completed in the 1990s — less than 5% together with dwellings in uncompleted buildings<sup>3</sup>. The dwelling stock of rural municipalities is older than that of cities — 39% of dwellings locating in rural municipalities and 13%

of dwellings in cities had been completed before 1946.

**Table C. Dwellings by time of construction and type of building, 2000**

(percentage of dwellings with known time of construction, %)

Time of construction	All types of buildings	Apartment building	One-family house and other small residential building
All dwellings	100.0	100.0	100.0
Before 1919	8.4	4.3	17.3
1919–1945	13.5	5.5	31.5
1946–1960	10.2	8.2	14.8
1961–1970	20.4	24.3	11.6
1971–1980	22.2	28.3	8.7
1981–1990	20.4	26.2	7.4
1991–1995	2.9	2.8	3.0
1996 or later	1.1	0.3	3.0
Uncompleted building	0.9	0.1	2.7

The age structure of the dwelling stock in cities and rural municipalities, in general, reflects the location of the population at different time periods. Before the World War II, when most of the population lived in rural municipalities, also the majority of dwellings were built there (Diagram 6). The increasing concentration of economic activities into cities and the rapid growth in immigration after war caused the need to considerably expand the dwelling construction in cities. Consequently, 76% of dwellings completed in 1961–1990 are located in cities. In the 1990s, when the dwelling construction activity decreased remarkably, also the proportion of dwellings built in cities showed a significant decrease (Table D).

**Table D. Indicators of dwellings and buildings containing dwellings by time of construction of the building, 2000**

Time of construction	Average number of dwellings in buildings	Average number of dwellings in apartment buildings	Percentage of dwellings in apartment buildings, %	Percentage of dwellings in cities, %
Total <sup>4</sup>	3.1	19.8	68.2	65.8
Before 1919	1.6	6.3	35.7	41.6
1919–1945	1.4	6.5	28.3	40.9
1946–1960	2.2	10.9	55.5	70.9
1961–1970	5.3	25.5	82.6	78.1
1971–1980	7.7	35.8	88.2	76.7
1981–1990	8.2	38.3	89.0	72.7
1991–1995	3.3	30.4	68.8	66.9
1996 or later	1.4	18.0	20.6	54.2

<sup>1</sup> Census data was supplemented first with the data from the Building Register. After that, the construction time recorded by at least three fourths of respondents was considered the time of construction in apartment buildings.

<sup>2</sup> In time of construction percentages, only dwellings with the known time of construction are taken into consideration.

<sup>3</sup> The answer “uncompleted building” was recorded in case some rooms of a building had already been used for permanent habitation although the local government had not granted an authorisation for its use.

<sup>4</sup> Including dwellings in uncompleted buildings and in buildings with unknown time of construction.

The age structure of apartment buildings and small residential buildings (one-family house, a semi-detached house and a row house) and their proportion at different periods of time varies greatly (Tables C and D, Diagram 7). Of dwellings locating in small residential buildings, over 63% and of dwellings in apartment buildings, only 18% had been completed before 1961. The majority — 79% — of dwellings locating in apartment buildings had been completed in 1961–1990. Consequently, on an average, the dwelling stock of small residential buildings is considerably older than that of apartment buildings.

In 1961–1990, the average number of dwellings in apartment buildings grew, thus increasing also the general indicator — the average number of dwellings in the building (Table D). As a result of great changes occurring in the structure of dwelling construction, the above-mentioned indicator fell in the second half of the 1990s to the level of the period from 1919 to 1945.

Floor area of the dwelling is characterised by the following key numbers:

- The known floor area of all dwellings totalled 35.8 million square metres. The floor area was unknown in the case of 2.1% of dwellings.
- The known floor area of occupied dwellings was 31.9 million square metres<sup>1</sup>.
- The average floor area of a dwelling was 59.3 square metres and the average floor area of an occupied dwelling was 59.6 square metres.
- In occupied dwellings, the average floor area per inhabitant was 24.0 square metre<sup>2</sup>.

The floor area of more than 60% of dwellings was between 40 to 79 square metres. The distribution of the floor area of private houses (family dwellings or parts of family dwellings) was more homogeneous compared to the apartments and their floor area range was wider (Diagram 9). The distribution of apartments by floor area largely reflects the sizes of apartments constructed by standard designs. Diagram 10 illustrates the differences in the distribution of dwellings by floor area in counties and diagram 11 illustrates the respective differences by Tallinn city districts.

As the proportion of dwellings locating in one-family houses was large in rural municipalities, also the average floor area was considerably larger in rural municipalities than in cities, 69.8 and 54.0 square metres, respectively (Table E). At the

same time, the average area of a one-family house was slightly smaller in rural municipality than in city. The situation was the opposite in the case of dwellings locating in apartment buildings — on the average, apartments were larger in rural municipalities than in cities.

Table E. Average floor area and number of rooms of the dwelling by type of building, 2000

Type of building	Total	Cities	Rural municipalities
<b>Average floor area of dwelling, m<sup>2</sup></b>			
All types of buildings <sup>3</sup>	59.3	54.0	69.8
Apartment building	49.7	49.0	53.1
One-family house	83.5	87.1	82.0
Other small residential building	70.4	70.4	70.3
Non-residential building	47.6	46.5	48.3
<b>Average number of rooms in dwelling</b>			
All types of buildings	2.6	2.4	3.0
Apartment building	2.3	2.2	2.4
One-family house	3.5	3.9	3.3
Other small residential building	3.1	3.1	3.0
Non-residential building	2.1	2.1	2.1

The average floor area of dwellings in counties was fairly different — from 51.7 square metres in Ida-Viru county to 72.3 square metres in Hiiu county. These differences relate first of all to different percentages of apartment buildings and small residential buildings in different counties, but also the average floor area of the same type of building differed considerably by counties. For example, the average floor area of a one-family house was 91 square metres in Harju county (incl. 96 square metres in Tallinn), but 75 square metres in Saare county. Thematic map 7 shows the average floor area of occupied dwellings per inhabitant by administrative units.

The data on the average floor area of dwellings reflect different proportions of dwellings locating in apartment buildings and small residential buildings at different periods of time and changes in the size of various types of dwellings. The average floor area of a dwelling was the smallest in buildings completed in 1961–1970 (Table F). At that time, the proportion of dwellings locating in apartment buildings formed already over 80% and the average floor area of these dwellings was the smallest (43.7 square metres). In the following years, their proportion grew slightly, but also the average floor area of apartments increased.

<sup>1</sup> Floor area remained unknown for 0.5% occupied dwellings and for 12.9% non-occupied dwellings.

<sup>2</sup> Calculated for inhabitants of dwellings with known floor area.

<sup>3</sup> Including dwellings the type of the building of which is unknown.

After Estonia regained independence, when the compulsory building codes were repealed, the floor area of dwellings started to grow considerably, especially in private houses. The growth in the

average floor area of dwellings completed in the 1990s was mainly due to the essentially increased percentage of private houses and to the growth in their average floor area.

**Table F. Average floor area and number of rooms of the dwelling by time of construction of the building, 2000**

	Total <sup>1</sup>	Before 1919	1919– 1945	1946– 1960	1961– 1970	1971– 1980	1981– 1990	1991– 1995	1996 or later
Average floor area of dwelling, m <sup>2</sup>	59.3	63.2	66.7	58.8	49.1	55.6	60.2	80.3	124.0
Average number of rooms in dwelling	2.6	2.6	2.9	2.7	2.4	2.5	2.6	3.1	4.1

Besides floor area, the size of dwelling can be assessed by number of rooms therein. The number of rooms per one inhabitant is regarded as an indicator of privacy, this aspect is not characterised by the floor area. According to the Census data, on

an average, there were 2.61 rooms in one dwelling and 2.64 rooms in an occupied dwelling. There were, on an average, 1.06 rooms per inhabitant in occupied dwellings.

**Table G. Dwellings by number of rooms, 2000**

Number of rooms	Total	%	Cities	%	of which Tallinn	%	Rural municipalities	%
All dwellings	617 399	100.0	405 962	100.0	172 753	100.0	211 437	100.0
With 1 room	91 955	14.9	72 606	17.9	33 836	19.6	19 349	9.2
With 2 rooms	219 530	35.6	162 576	40.1	68 793	39.8	56 954	26.9
With 3 rooms	188 508	30.5	115 073	28.3	50 956	29.5	73 435	34.7
With 4 rooms	65 339	10.6	33 323	8.2	11 266	6.5	32 016	15.1
With 5 rooms	26 420	4.3	12 277	3.0	3 744	2.2	14 143	6.7
With 6 or more rooms	13 831	2.2	6 283	1.6	2 063	1.2	7 548	3.6
Unknown	11 816	1.9	3 824	0.9	2 095	1.2	7 992	3.8

The proportion of dwellings with two and three rooms was the largest (Table G, Diagram 12). There were nearly as many dwellings with four and five rooms as dwellings with one room (15%), dwellings with six and more rooms made up only slightly over 2%. Apartment buildings mainly contained dwellings with one to three rooms (over 92%). More than half of one-family houses had three or four rooms. The average number of rooms in different types of buildings (Table E) generally characterises the same tendencies as the relevant data on the average floor area. The floor area and the number of rooms are usually in correlation — there are more rooms on a larger area and vice versa. We can see that, on an average, one-family houses in rural municipalities are smaller than in cities also with respect to the number of rooms. On the other hand, in rural municipalities, apartments

in apartment buildings are slightly bigger. Changes in the average number of rooms and floor area took place simultaneously at different times of construction (Table F). The proportion of small (with one and two rooms) dwellings was the largest in buildings completed in 1961–1970 (Diagram 13). Dwellings with two rooms accounted for 51% of dwellings completed in this period and dwellings with one and two rooms for nearly 63%. In the following periods, the percentage of dwellings with two rooms fell steadily and in the 1970s and 1980s, the proportion of dwellings with three rooms increased. Characteristic of the nineties was the rapid growth in the proportion of dwellings with four or more rooms. Of dwellings completed in 1996 and later, over 60% were with four or more rooms.

<sup>1</sup> Including dwellings in uncompleted buildings and in buildings with unknown time of construction..

Table H reflects the comfort characteristics available in dwellings. Same as in the case of other characteristics there were big differences between cities and rural municipalities in the availability of different comforts in dwellings and buildings (Diagram 14). In cities compared to rural municipalities there were 2.3 times more dwellings with central or electric heating, about two times more dwellings with flush toilet and hot water, and 1.6 times more dwellings with water supply system and sewage disposal system. Although there are considerably more dwellings with sauna<sup>1</sup> in rural

municipalities, the washing facilities are still better in cities, as in cities there are more dwellings which have either a bath, shower or sauna. Also when taken by type of dwellings the comfort characteristics of dwellings in cities appear to be better: private houses in cities, on an average, are better equipped with modern comforts than those in rural municipalities, the same goes for apartments and separate living rooms in cities. Because of the low density it has been more complicated to build comfort facilities in the countryside. They were primarily built into larger settlements.

**Table H. Dwellings by comfort characteristics and type, 2000**  
(percentage of dwellings with known comfort characteristics, %)

Type of comfort characteristics	All dwellings			Family dwelling or part of family dwelling			Apartment or separate living room(s)		
	total	cities	rural municipalities	total	cities	rural municipalities	total	cities	rural municipalities
Kitchen (kitchenette)	98.8	98.4	99.6	99.7	99.6	99.7	98.5	98.2	99.5
Water supply system	83.2	94.6	60.4	53.5	79.1	41.4	95.5	97.2	88.5
Sewage disposal system	81.5	92.9	58.8	48.6	68.7	39.1	95.2	97.0	87.9
Hot water	64.9	78.4	38.0	33.5	49.2	26.0	78.0	83.2	55.8
Bath (shower)	68.7	81.4	43.2	29.5	45.2	22.0	84.9	87.4	74.4
Sauna	16.9	7.9	34.7	54.5	49.7	56.7	1.3	1.0	2.6
Flush toilet	73.2	87.4	44.8	29.9	48.9	20.9	91.1	93.8	79.7
Gas	40.0	44.6	30.9	31.5	29.1	32.6	43.5	47.1	28.3
Central heating	60.4	76.6	28.2	16.8	26.9	12.0	78.5	84.8	52.0
Electric heating	5.4	4.7	6.7	7.7	13.8	4.7	4.5	3.2	9.7

In Estonia, in general, the average level of the availability of comfort amenities in apartments is considerably higher than that in private houses. In the case of different comfort characteristics, a certain comfort level of apartments had been attained many decades earlier than in private houses. For example, the water supply system was available in 69% of apartments built before 1919, but in private houses, the same figure was reached only in 1961–1970. One reason of the mentioned backlog is the circumstance that the majority of private houses are located in the countryside where the utility network is less developed. Also, as the dwelling stock of private houses is considerably older than that of apartments, the comfort characteristics of private houses are fairly poor. In buildings completed in the last couple of decades, the differences between private houses and apartment buildings have decreased steadily, and private houses built in the 1990s are in no way second best to apartment buildings as regards comfort amenities.

By the year 2000, when the Census was conducted, privatisation and restitution of dwellings to their former owners or their heirs had largely come to an end. The prevailing part of dwellings were in private ownership by that time, which can be seen in the following distribution of dwellings<sup>2</sup>:

- public sector — 4.2%  
of which state — 0.7%  
local government — 3.5%
- private sector — 95.8%  
of which private person — 90.5%  
dwelling association — 4.1%  
other owner — 1.2%

In general, the percentage of dwellings of the public sector did not differ considerably between cities and rural municipalities, the differences were bigger between counties. The proportion of dwellings of the public sector was the largest in Ida-Viru county (8%), and the smallest in Hiiu and Saare counties (2%). Over 24,600 dwellings

<sup>1</sup> Excluding public saunas built in the cellars of apartment buildings.

<sup>2</sup> Here and hereafter percentages are calculated for dwellings with known owners. Owner remained unknown for 5.2% of all dwellings and for 1.7% of occupied dwellings.

belonged to the public sector, 82% of which were apartments and 12% were isolated rooms in hostel-type houses. The relatively large percentage of the last mentioned type of dwellings was especially characteristic of the public sector. This type of dwellings formed under 0.3% of dwellings of the private sector. There proportion of occupied dwellings was smaller in the public sector (82.3%) than in the private sector (90.7%). The number of rooms was smaller in the public sector's dwellings compared to the private sector (Table I).

**Table I. Dwellings by number of rooms and owner, 2000**  
(percentages)

Number of rooms	State	Local government	Private sector
All dwellings	100.0	100.0	100.0
With 1 room	42.7	40.2	13.3
With 2 rooms	30.9	38.2	35.6
With 3 or more rooms	24.9	19.6	50.0
Unknown	1.5	2.0	1.1

The average floor area of dwellings owned by the state was 41.8 square metres and of dwellings owned by local governments it was 39.7 square metres. The respective figure for dwellings owned

by private persons was 61.0 square metres. There are less comfort characteristics in dwellings of the public sector than in the private sector — there are considerably fewer dwellings with hot water, bath (shower), and sauna in the public sector. As the percentage of hostel-type rooms is relatively big among dwellings owned by the public sector, there are more dwellings without a kitchen or kitchenette.

Of all dwellings, 87.1% were occupied, i.e. it was a permanent place of residence of at least one person (Table J). The previous 1989 Population Census collected data only about occupied dwellings. As definitions of the type of dwellings were slightly different in the two censuses, the total number of dwellings is not comparable. For example, in 1989 the answer "part of the private house" was recorded when two or more families (or individuals) lived in a house owned by one person. In 2000 a similar answer "part of the family dwelling" was recorded when a family house had been divided into several dwellings which had separate entrances and secondary rooms or only separate kitchens. Hence, considerably more such answers were recorded in 1989 than in 2000 (26,635 dwellings in 1989; 15,025 dwellings in 2000). Mainly because of this difference the total number of occupied dwellings was by 7,015 larger in 1989 (544,922 dwellings) than in 2000.

**Table J. Dwellings by type and occupancy, 2000**

Type of dwelling	All dwellings	%	Occupied	%	Reserved	%	Vacant	%	Occupancy unknown	%
All dwellings	617 399	100.0	537 907	100.0	29 043	100.0	37 438	100.0	13 011	100.0
Family dwelling	171 086	27.7	133 595	24.8	19 932	68.6	14 639	39.1	2 920	22.4
Part of the family dwelling	16 834	2.7	15 025	2.8	635	2.2	1 004	2.7	170	1.3
Apartment	424 768	68.8	385 796	71.7	8 169	28.1	21 155	56.5	9 648	74.2
Separate living room(s)	4 711	0.8	3491	0.7	307	1.1	640	1.7	273	2.1

In 2000, the proportion of occupied dwellings was considerably larger in cities than in rural municipalities (Table K).

**Table K. Percentage of occupied dwellings by type of dwelling, 2000**

Type of dwelling	Total	Cities	of which Tallinn	Rural municipalities
All dwellings	87.1	91.7	92.8	78.3
Family dwelling or part of it	79.1	90.3	93.5	74.0
Apartment or separate living room(s)	90.6	92.0	92.7	85.0

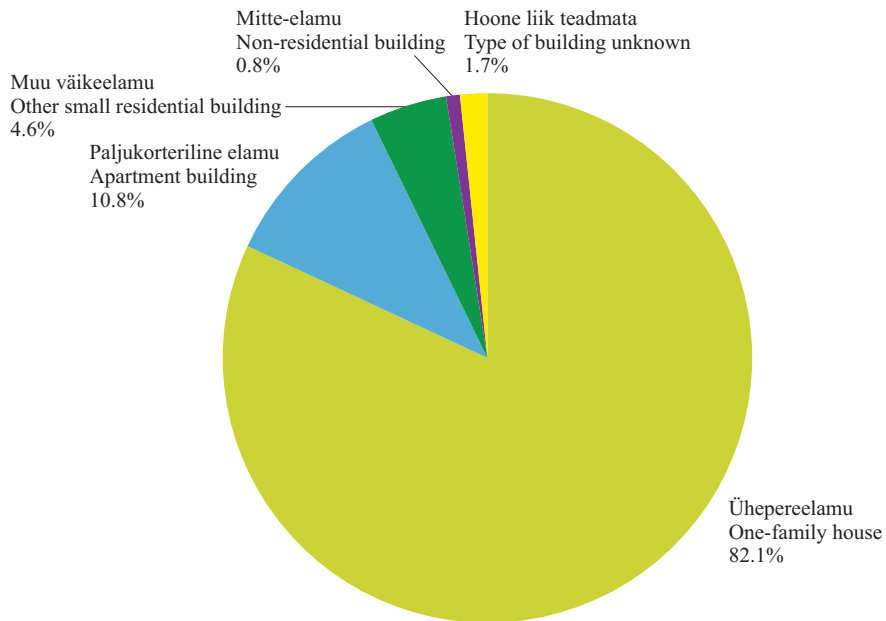

*Occupied dwellings accounted for over 90% of all dwellings in the five biggest cities (Tallinn, Tartu, Narva, Kohtla-Järve, Pärnu). In smaller cities, the proportions of occupied dwellings were more different being the smallest in Narva-Jõesuu (70.7%), Mustvee (78.9%) and Kallaste (80.8%). The proportions of occupied dwellings ranged even between wider boundaries in rural municipalities (Thematic map 5). For example, in rural municipalities around Tallinn (except Jõelähtme) over 90% of dwellings were occupied, while in five Estonian rural municipalities less than half of dwellings were occupied. The proportion of occupied dwellings was often larger in regions with more active economic activity and also around these regions. Besides the decrease in the economic activity, also the leaving of the former Soviet Army, emigration and other factors contributed to the growth in the number of abandoned dwellings in some other regions. Thematic map 6 reflects the*

*average number of inhabitants per occupied dwelling in administrative units.*

*Many unoccupied dwellings were used seasonally or temporarily (reserved dwellings). The majority of these dwellings (71%) were family dwellings or parts of a family dwelling including, for example, empty farm houses and former summer cottages, which, although rebuilt for all-the-year-round habitation, were used only seasonally. Among vacant dwellings, which were empty throughout the year, the majority were apartments and separate rooms (58%). Compared to occupied dwellings, the reserved and vacant dwellings were fairly older and more poorly equipped with comfort amenities. With respect to the number of rooms, the reserved dwellings, but especially the vacant dwellings were smaller than the occupied ones — there were proportionally more dwellings with one room among them, and less with three or more rooms.*

## Teemakaardid

### Eesti maakonnad ja linnad, 2000 (esikaane siseküljel)

Eesti haldusjaotuse kaart maakondade (15) nimede, piiride ja pindaladega ning linnade (42) nimedega. Kaardil on tähistamata vallasisesed linnad (Läänemaal — Lihula; Valgemaal — Otepää; Viljandimaal — Abja-Paluoja ja Karksi-Nuia; Võrumaal — Antsla).

Aluseks on I kogumiku **Tabel 2**. Haldusüksuste faktiline ja alaline rahvastik soo järgi, 1989, 2000.

### Eesti vallad, 2000 (tagakaane siseküljel)

Eesti haldusjaotuse kaart maakondade piiride ning valdade (205) nimede ja piiridega. Kaardil on tähistamata nende alev-valdade nimed, mis langevad kokku vallanimedega (Pärnumaal — Vändra alev-vald; Raplamaal — Kohila alev-vald ja Märjamaa alev-vald).

Aluseks on I kogumiku **Tabel 2**. Haldusüksuste faktiline ja alaline rahvastik soo järgi, 1989, 2000.

### Teemakaart 1. Eluruumidega hoonete osatähtsus ning jaotus hoone liigi järgi maakondades, 2000

Eluruumidega hoonete jaotus hoone liigi järgi (2 gruppi: ühepereelamu (s.o korteriteks jaotamata ühepereelamu) ja muu väikeelamu, paljukorteriline elamu) protsentides maakondades on esitatud iga maakonna taustal tulpdiagrammina.

Maakondade eluruumidega hoonete osatähtsus Eesti eluruumidega hoonete koguarvus protsendivahemike järgi on esitatud värvitooni tugevusega.

Aluseks on **Tabel 8**. Eluruumidega hooned ja eluruumid asukoha ja hoone liigi järgi, 2000.

### Teemakaart 2. Keskmiselt elurume hoones maakondades ning linnades ja valdades, 2000

Keskmine eluruumide arv hoones linnades ja valdades on esitatud iga maakonna taustal tulpdiagrammina.

Keskmine eluruumide arv hoones maakondades arvuvahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 3,1.

Aluseks on **Tabel 8**. Eluruumidega hooned ja eluruumid asukoha ja hoone liigi järgi, 2000.

### Teemakaart 3. Linnade eluruumide osatähtsus ning jaotus eluruumi tüübi järgi maakondades, 2000

Maakonna linnade eluruumide jaotus eluruumi tüübi järgi (2 gruppi: pereelamu või selle osa, korter või omaette tuba (toad)) protsentides on esitatud iga maakonna taustal sektordiagrammina.

Linnade eluruumide osatähtsus eluruumide koguarvus maakondades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 65,8%.

Aluseks on **Tabel 39**. Eluruumid asukoha ja tüübi järgi, 2000

### Teemakaart 4. Paljukorteriliste elamute eluruumide osatähtsus maakondades, 2000

Paljukorteriliste elamute eluruumide osatähtsus eluruumide koguarvus maakondades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 68,2%.

Aluseks on **Tabel 8**. Eluruumidega hooned ja eluruumid asukoha ja hoone liigi järgi, 2000.

### Teemakaart 5. Asustatud eluruumide osatähtsus haldusüksustes, 2000

Asustatud eluruumide osatähtsus eluruumide koguarvus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 87,1%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on **Tabel 9**. Asustatud eluruumidega hooned, eluruumid, leibkonnad ja elanikud hoone asukoha ja liigi järgi, 2000; 2000. aasta rahva ja eluruumide loenduse andmebaas.

### Teemakaart 6. Keskmiselt elanikke asustatud eluruumi kohta haldusüksustes, 2000

Keskmine elanike arv ühe asustatud eluruumi kohta linnades ja valdades arvuvahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 2,5. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on **Tabel 9**. Asustatud eluruumidega hooned, eluruumid, leibkonnad ja elanikud hoone asukoha ja liigi järgi, 2000.

### Teemakaart 7. Asustatud eluruumide keskmine pind elaniku kohta haldusüksustes, 2000

Asustatud eluruumide keskmine pind elaniku kohta linnades ja valdades ruutmeetrites arvuvahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 24,0. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on **Tabel 44**. Asustatud eluruumid asukoha ja pinna järgi, 2000.

Teemakaartidel 1–7 on kohaliku omavalitsuse piir (valla- ja linnapiir) tähistatud peene musta joonega ja maakonnapiir jämedama valge joonega. Veekogud (Võrtsjärv ja Peipsi järv) on valged.

## **Diagrams**

### **Diagram 1. Buildings containing dwellings by type, 2000**

Based on **Table 1**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings by type and time of construction of the building, 2000.

### **Diagram 2. Apartment buildings by number of dwellings, 2000**

Based on database of the 2000 Population and Housing Census.  
Bigger cities include Tartu, Pärnu, Narva and Kohtla-Järve.

### **Diagram 3. Dwellings in cities by type of building, 2000**

Based on **Table 2**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings in cities by type and time of construction of the building, 2000.

### **Diagram 4. Dwellings in rural municipalities by type of building, 2000**

Based on **Table 3**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings in rural municipalities by type and time of construction of the building, 2000.

### **Diagram 5. Dwellings in Tallinn by number of dwellings in the building, 2000**

Based on database of the 2000 Population and Housing Census.

### **Diagram 6. Dwellings in cities and rural municipalities by time of construction, 2000**

Based on **Table 2**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings in cities by type and time of construction of the building, 2000 and **Table 3**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings in rural municipalities by type and time of construction of the building, 2000.

### **Diagram 7. Dwellings by type of building and time of construction, 2000**

Based on **Table 1**. Buildings containing dwellings, dwellings, floor area and average floor area of dwellings by type and time of construction of the building, 2000.

### **Diagram 8. Dwellings by type, 2000**

Based on **Table 38**. Dwellings by occupancy and type, 2000.

### **Diagram 9. Dwellings by type and floor area, 2000**

Based on database of the 2000 Population and Housing Census.

### **Diagram 10. Dwellings in counties by floor area, 2000**

Based on **Table 43**. Dwellings by location and floor area, 2000.

### **Diagram 11. Dwellings in Tallinn by floor area, 2000**

Based on **Table 43**. Dwellings by location and floor area, 2000.

### **Diagram 12. Dwellings by number of rooms, 2000**

Based on **Table 56**. Dwellings by type and number of rooms, 2000.

### **Diagram 13. Dwellings by time of construction and number of rooms, 2000**

Based on **Table 25**. Dwellings by type of building, number of rooms and time of construction of the building, 2000.

### **Diagram 14. Dwellings in cities and rural municipalities by comfort characteristics, 2000**

Based on **Table 64**. Dwellings in cities by comfort characteristics and type, 2000 and **Table 65**. Dwellings in rural municipalities by comfort characteristics and type, 2000.  
Percentages are given for dwellings comfort characteristics of which were recorded.

## **Thematic maps**

### **Counties and cities of Estonia, 2000** (on the inner side of the front cover)

Map of administrative division of Estonia with the names, borderlines and areas of counties (15), and names of cities (42). Cities without municipal status are not marked on the map (in Lääne county — Lihula; in Valga county — Otepää; in Viljandi county — Abja-Paluoja and Karksi-Nuia; in Võru county — Antsla).

Based on **Table 2** (Census Publication I). De facto and usual resident population of administrative units by sex, 1989, 2000.

### **Rural municipalities of Estonia, 2000** (on the inner side of the back cover)

Map of administrative division of Estonia with the borders of counties and names and borders of rural municipalities (205). The names of towns which coincide with the names of rural municipalities are not marked on the map (in Pärnu county — Vändra town; in Rapla county — Kohila town and Märjamaa town).

Based on **Table 2** (Census Publication I). De facto and usual resident population of administrative units by sex, 1989, 2000.

### **Thematic map 1. Proportion of buildings containing dwellings and their distribution by type of building in counties, 2000**

The distribution (2 groups: one-family house (i.e. one-family house that has not been divided into apartments) and other small residential building, apartment building) of buildings containing dwellings in counties by type of building has been presented as a bar chart on the map of counties at the background of each county.

Proportion of buildings containing dwellings in counties in the total number of buildings containing dwellings of Estonia by percentage intervals has been presented by different shades of colour.

Based on **Table 8**. Buildings containing dwellings and dwellings by location and type of building, 2000.

### **Thematic map 2. Average number of dwellings per building in counties and in cities and rural municipalities, 2000**

The average number of dwellings per building in cities and rural municipalities has been presented as a bar chart on the map of counties at the background of each county.

The average number of dwellings per building in counties by number intervals has been presented by different shades of colour. The average of Estonia is 3.1.

Based on **Table 8**. Buildings containing dwellings and dwellings by location and type of building, 2000.

### **Thematic map 3. Proportion of urban dwellings and their distribution by type of dwelling in counties, 2000**

The distribution of dwellings (2 groups: family dwelling or part of family dwelling, apartment or separate living room(s)) of cities in counties by type of dwelling has been presented as a pie chart on the map of counties at the background of each county.

Proportion of dwellings of cities in the total number of dwellings in counties by percentage intervals has been presented by different shades of colour. The average of Estonia is 65.8%.

Based on **Table 39**. Dwellings by location and type, 2000.

### **Thematic map 4. Proportion of dwellings of apartment buildings in counties, 2000**

Proportion of dwellings of apartment buildings in the total number of dwellings in counties by percentage intervals has been presented by different shades of colour. The average of Estonia is 68.2%.

Based on **Table 8**. Buildings containing dwellings and dwellings by location and type of building, 2000.

### **Thematic map 5. Proportion of occupied dwellings in administrative units, 2000**

Proportion of occupied dwellings in total number of dwellings in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 87.1%. The same indicator has been presented separately on the small map of counties.

Based on **Table 9**. Buildings containing occupied dwellings, dwellings, households and inhabitants by location and type of building, 2000; Database of the 2000 Population and Housing Census.

### **Thematic map 6. Average number of inhabitants per occupied dwelling in administrative units, 2000**

The average number of inhabitants per one occupied dwelling in cities and rural municipalities by number intervals has been presented by different shades of colour. The average of Estonia is 2.5. The same indicator has been presented separately on the small map of counties.

Based on **Table 9**. Buildings containing occupied dwellings, dwellings, households and inhabitants by location and type of building, 2000.

***Thematic map 7. Average floor area of occupied dwellings per inhabitant in administrative units, 2000***

*The average floor area of occupied dwellings per inhabitant in cities and rural municipalities by number intervals (square metres) has been presented by different shades of colour. The average of Estonia is 24.0. The same indicator has been presented separately on the small map of counties.*

*Based on **Table 44**. Occupied dwellings by location and floor area, 2000.*

*In thematic maps 1–7, the border of the local municipality (the border of the rural municipality and the border of the city) has been marked with a thin black line and the border of the county with a thicker white line. The bodies of water (Võrtsjärv and Peipsi) are white.*

## Mõisted

**Elamu** — hoone, mille pinnast 50% või rohkem kasutatakse alaliseks elamiseks. Elamud on paljukorterilised elamud, ühepereelamud ja muud väikeelamud (vt hoone liik).

**Elukoht** (alaline elukoht) — haldusüksus või asula, kus asub eluruum, milles isik loenduse ajal alaliselt elas. Elukohaks loeti koht, kuhu isik kavatses jääda elama või kus ta oli elanud vähemalt ühe aasta. Isikul, kellel oli rohkem kui üks elukoht, loeti (põhi)elukohaks koht, kus elas tema leibkond. Õppimiskohas elavate kõrgkoolide, keskeri- ja teiste kutseõppeasutuste õpilaste elukohaks loeti õppimiskoha asukoha eluruum (mitte vanemate elukoht). Institutsioonis (hoolekandeaasutused, kinnipidamisasutused jm) rohkem kui aasta elanud või sinna rohkem kui aastaks jäävate isikute elukohaks loeti institutsioon. Ajateenijate elukohaks loeti koht, kust nad ajateenistusse läksid. Loenduse ajal välisriigis viibinud Eesti Vabariigi diplomaatiliste ja konsulaaresinduste diplomaatilise personali ja nende leibkonnaliikmete elukohaks loeti nende elukoht Eestis. Kodutute elukohaks loeti asula, kus nad loendati.

**Eluruum** — aastaringseks elamiseks sobiv pereelamu, korter või muu omaette ruum. Peale selle loeti eluruumiks eluase, mis ei olnud alaliseks elamiseks kavandatud, kuid kus loendusmomendil elas alaliselt vähemalt üks isik. Eluruumid jaotati tavaeluruumideks, mittetavaeluruumideks ja majutusruumideks. Käesolevas kogumikus mõistetakse eluruumina vaid tavaeluruume (v.a tabel 37).

- Tavaeluruum — pereelamu, osa pereelamust, korter või omaette tuba (toad). Loendati kõiki tavaeluruume, sõltumata sellest, kas seal loendusmomendil mõni isik asus või elas. Tavaeluruumid jaotati järgmiselt:
  - a. pereelamu — väikeelamu (sh taluelamu, kaksikelamuboks, ridaelamuboks või endine suvemaja, mis on kohandatud aastaringseks kasutamiseks), mis moodustab ühe eluruumi.
  - b. osa pereelamust — pereelamu on jaotatud mitmeks eluruumiks (eraldi sissepääsud ja abiruumid või ainult eraldi köögid).
  - c. korter — eluruum, mis on teistest eluruumidest ehituslikult isoleeritud ja võimaldab korraldada majapidamist (olemas abiruumid). Korteriks loeti ka kööktoad ja tööandja eluruumid.
  - d. omaette tuba (toad) — ühiselamu tüüpi majade isoleeritud tuba (toad), mida ei kasutatud

loenduse ajal majutusruumina (nt erastatud tuba endises ühiselamus).

- Mittetavaeluruum (elamiseks kasutatav mitteeluruum) — mitmesugused elamiseks kohandatud ruumid (laohoone, veski, garaaž jne), suvemajad, mis ei sobi aastaringseks kasutamiseks, vagunelamud, haagiselamud, paatmajad, laevad, kui neis loendusmomendil elas alaliselt vähemalt üks leibkond. Reisijate majutusruume laevadel ja rongikupeedes eluruumideks ei loetud.
- Majutusruum — ühiselamu, hotelli, kämpingu, motelli, pansioni, võõrastemaja, spordi- ja puhkebaasi, puhkekodu, külalistemaja, turismitalu vms tuba (toad), mis on põhimõtteliselt ette nähtud ajutiseks kasutamiseks (leibkonnal puudub omandiõigus), kuid kus loendusmomendil elas alaliselt vähemalt üks isik.

**Eluruumi asustatus** — tavaeluruumid jaotati asustatuse alusel järgmiselt:

- Asustatud eluruum — eluruum, mis oli loendusmomendil vähemalt ühe isiku alaline elukoht.
- Reserveeritud eluruum — eluruum, mis ei olnud loendusmomendil ühegi isiku alaline elukoht, kuid seal elas ajutisi elanikke või oli omanik selle reserveerinud hooajaliseks või teisejärguliseks kasutamiseks (nt taluelamud, mida kasutati suvitamiseks).
- Asustamata eluruum — eluruum oli asustamata, kui see ei olnud loendusmomendil ühegi isiku alaline elukoht ega olnud reserveeritud. Loendati vaid need asustamata eluruumid, mis sobivad aastaringseks kasutamiseks.

**Eluruumi omanik** — tavaeluruumid jaotati omaniku põhjal järgmiselt:

- Riik — omanik on riigiasutus või riiklik organisatsioon (fond).
- Kohalik omavalitsus — omanik on linn (linnaosa) või vald.
- Eesti elanik — omanik on isik, kelle alaline elukoht on Eestis.
- Välisriigi elanik — omanik on isik, kelle alaline elukoht asub väljaspool Eesti Vabariiki.

- Elamuühistu — omanik on elamuühistu (-kooperatiiv). Siia ei kuulu korteriühistu liige, kes on eluruumi omanik.
- Muu — omanik on näiteks äriühing, kirik või muu mittetulundusühing, sihtasutus, põllumajandusühistu jms.

Eluruumi pind — tubade ja abiruumide (köök, esik, garderoob, hall, tualett, sahv, vaheruum, vannituba, panipaik, veranda, sisseehitatud seinakapid) põrandapinna summa. Lodžasid, rõdusid, terrasse (s.o lahtisi pindu), keldreid, garaaže, trepikodasid ja muid üldkasutatavaid ruume paljukorterilistes elamutes eluruumi pinna hulka ei arvestatud.

Eluruumi keskmine pind saadakse eluruumide kogupinna jagamisel nende eluruumide arvuga, mille pind on teada.

Eluruumi tüüp — vt eluruum.

Hoone — maapinnaga püsivalt ühendatud välispiirete, katuse ja siseruumidega ehitus. Vaadeldi vaid tavaeluruumidega hooned.

Hoone ehitusaeg — ajavahemik, kuhu kuulub hoone ametliku vastuvõtmise (ekspluatatsiooni andmise) aasta. Kui hoone oli hiljem ümber ehitatud, laiendatud vms, märgiti ehitusajaks ikkagi ajavahemik, kuhu jäi hoone esialgse vastuvõtmise aasta (v.a juhul, kui hoone oli täielikult hävinud ja hiljem taastatud). “Ehitus pooleli” märgiti hoone puhul, mille mõnda ruumi kasutati loendusmomentil juba alaliseks elamiseks, kuid kohalik omavalitsus ei olnud andnud hoone kasutusluba.

Hoone liik — tavaeluruumidega hooned jaotati elamuteks ja mitte-elamuteks. Elamute hulka kuuluvad paljukorteriline elamu, ühepereelamu ja muu väikeelamu.

- Paljukorteriline elamu — vähemalt kolmest korterist koosnev elamu, millel on sissepääs üldjuhul ühisest esikust, koridorist või trepikojast.
- Ühepereelamu — algselt ühele perele projekteeritud ja ehitatud elamu, kus võib elada ka mitu leibkonda ning mis on korteriteks jaotamata. Siia kuuluvad ka taluelamud ja endised suvemajad, mis on kohandatud aastaringseks elamiseks. Kui pereelamu oli ümber ehitatud kaheks isoleeritud korteriks, märgiti vastus “muu väikeelamu”. Ühepereelamu mõiste erineb mõistest “pereelamu”, mis tähistab eluruumi tüüpi ning hõlmab ka ridaelamuboksi ja kaksikelamuboksi. Hoone liik “ühepereelamu” hõlmab ainult korteriteks jaotamata ühepereelamut.

- Muu väikeelamu on
  - a. kaksikelamu (paarismaja), mille moodustavad kaks kõrvuti asetsevat krundil küljelt kokkuehitatud pereelamut (erandina ka ühel krundil asuv kahe sissepääsuga elamu — kahepereelamu);
  - b. ridaelamu, mis koosneb vähemalt kolmest tule müüri või katusega ühendatud eraldi sissekäiguga pereelamust (ridaelamuboksist);
  - c. pereelamu, kuhu on ehitatud kaks korterit.
- Mitte-elamu on
  - a. hoone, mille kasulikust pinnast kasutatakse elamiseks hinnanguliselt alla 50%;
  - b. majutushoone — hoone, mille pinnast kasutatakse majutamiseks vähemalt 50% (nt ühiselamu, hotell, kamping, motell, võõrastemaja, spordi- ja puhkebaas, puhkekodu, külalistemaja, turismitalu vms). Arvesse läksid ainult need majutushooned, kus paiknes tavaeluruume.
  - c. muu mitte-elamu, mis oli loendusmomentil vähemalt ühe isiku alaline elukoht.

Leibkond — ühisel aadressil elavad isikud, keda seob ühine kodune majapidamine (ühine eelarve ja ühine toit). Üksinda elav isik loeti omaette leibkonnaks. Leibkonna liikmete vaheline sugulus- või hõimlusuhe ei olnud tingimata vajalik. Kui isik elas kellegagi ühisel eluruumis, kuid oli omaette leival ja eraldi eelarvel, siis loeti ta omaette leibkonnaks. Käesolevas kogumikus vaadeldakse vaid tavaeluruumides elavaid leibkondi.

Loendusmoment — loendusega kogutavate andmete fikseerimise kuupäev ja kellaaeg. 2000. aasta rahvaloenduse loendusmoment oli 31. märtsil 2000 kell 00.00.

Tavaeluruum — vt eluruum.

Teadmata — tabeli rida või veerg “teadmata” hõlmab juhtumeid, kus vastus on loenduslehele märkimata või on märgitud vastus, mida ei ole võimalik üheselt tõlgendada

Tehnovarustatus — köögi (kööginiši), veevärgi, kanalisatsiooni, sooja vee, vanni (duši), sauna, veekloseti, elektri, gaasi, kesk- ja elekterkütte olemasolu eluruumis. Kui eluruumis oli mingi tehnovarustuse liik olemas, aga avarii tõttu, elanike soovil või nende maksejõuetuse tõttu välja lülitatud, siis loeti see ikkagi olemasolevaks. Kui aga tehnosüsteem oli pikka aega (aasta ja rohkem) välja

lülitatud toite lõppemise tõttu (näiteks endise majandi keskasula katlamaja enam ei tööta), siis see tehnovarustuse liik puudub (vastuseks märgiti “ei ole”).

- a. Köök — vähemalt nelja ruutmeetri suurune või kahe meetri laiune püsiseintega eraldatud ruum, mis on varustatud toiduvalmistusseadmetega ja kus üldjuhul on ka aken.
- b. Kööginišš — eluruumis on toidu valmistamiseks sisustatud osa toast (näiteks statsionaarne pliit kööktoas või (aknata) alla nelja ruutmeetri suurune ajakohase küttekolde ja valamuga nišš) või köögi ja toa vaheline sein puudub (näiteks on lõhutud).
- c. Veevõrk — “on” märgiti juhul, kui külm vesi tuli eluruumi torustiku kaudu välisvõrgust ja kasutati veekraani.
- d. Kanalisatsioon — “on” märgiti juhul, kui heitveed ja fekaalid juhiti torustiku kaudu tsentraalsesse või lokaalsesse kanalisatsioonivõrku või kogumis-(imb)kaevu.
- e. Soe vesi — “on” märgiti juhul, kui seda saadi eluruumis asuvast kuumaveekraanist. Kas soe vesi tuli välisvõrgust või eluruumisisesest veesoojendist, ei olnud oluline.
- f. Vann (dušš) — “on” märgiti juhul, kui eluruumis asus statsionaarselt paigaldatud ja kanalisatsiooniga ühendatud vann või dušikabiin. Sooja vee saamise viis ei olnud oluline.
- g. Saun — “on” märgiti nii siis, kui saun oli korterisse, ühepereelamusse või muusse väikeelamusse sisse ehitatud, kui ka siis, kui saun asus omaette hoonena ühepereelamu või muu väikeelamu krundil (s.o väljaspool

eluruumi). Paljukorteriliste elamute keldritesse ehitatud ühissaunad arvesse ei läinud.

- h. Vee Klosett — “on” märgiti juhul, kui fekaalid uhuti veevärgist tuleva veega kanalisatsiooni.
- i. Elekter — “on” märgiti juhul, kui eluruumil oli ööpäevaringne ühendus alalise elektrienergiaallikaga.
- j. Gaas — “on” märgiti nii võrgu- kui ka vedel(balloon)gaasi olemasolu korral, olenemata selle kasutusviisist. Nendes ühisköögiga koridori tüüpi majades, kus köögis on statsionaarne gaasipliit, loeti gaasiga varustatuks kõik eluruumid (toad).
- k. Keskküte — “on” märgiti juhul, kui kütte tuli eluruumi torustiku kaudu kas tsentraalsest või lokaalsest katlamajast, samuti korterisisesest gaas-soojendi ja väikesemõdulise gaas-või tahkekütuse baasil töötava katla kasutamise korral. Eluruumis võib samal ajal olla mitu küttesüsteemi (keskküte, elekterküte, ahiküte); “on” märgiti siis, kui keskküte on valdav (enim kasutatav) küttesüsteem.
- l. Elekterküte — “on” märgiti juhul, kui soojatootmiseks kasutati eluruumis asuvaid statsionaarseid elektrikütteseadmeid (elektriküttekihi) ja see oli valdav küttesüsteem.

Tubade arv eluruumis — toaks loeti elutuba, magamistuba, lastetuba, kabinet, ärklituba, söögituba jne. Kui toa ja köögi vahel püsiseina ei olnud (näiteks lõhutud), loeti köök toa osaks. Kööki, esikut, tualettruume, vannituba, sahvrit, saunaruume jm abiruume tubade hulka ei arvatud. Kööktuba ja tuba ühiselamu tüüpi hoones (kui tuba kasutati eraldi eluruumina) loeti samuti toaks. Tubasid, mida kasutati ainult äri- või tööeesmärkidel, ei arvestatud.

## Definitions

Area of the dwelling — the total floor area of rooms and secondary rooms (kitchen, hall, toilet, pantry, interspace, bathroom, storage room, veranda, built-in cupboards). The area of balconies and terraces (i.e. open spaces), cellars, garages, corridors and other public rooms was not included in the total area of dwellings in apartment buildings.

The average floor area of dwellings is obtained by dividing the total floor area of dwellings by number of dwellings which area is known.

Building — construction permanently connected to the ground, enclosed within external walls, covered by roof and containing rooms. The Census covered the buildings containing conventional dwellings.

Comfort characteristics — availability of kitchen (kitchenette), water supply system, sewage disposal system, hot water, bath (shower) sauna, flush toilet, electricity, gas, central and electric heating in the dwelling. If the dwelling was equipped with some type of comfort characteristics but it had been switched off due to an emergency, at the request made by inhabitants or because the inhabitants were unable to pay for the service, it was still regarded as available. However, if these facilities had been switched off for a longer time (one year and longer) because of the termination of supplying them with energy (for example, the boiler house of the former co-operative in the central settlement is no longer operating), then this type of facility is missing (the answer was "no").

- Kitchen — a room of at least four square metres or two metres wide that has been separated with permanent walls and equipped for the preparation of meals and, as a rule, it also has a window.
- Kitchenette — part of a room equipped for the preparation of meals (for example, a fixed oven in a kitchenette; a (windowless) niche of less than four square metres with a contemporary stove and sink; the permanent wall between a room and a kitchen is missing (for example, it has been torn down).
- Water supply system — "yes" was recorded in case cold water came into the dwelling through pipes from an external central network and water tap was used.
- Sewage disposal system — "yes" was recorded in case wastewater and faeces emptied into a piped system connected to a public central or a local sewage disposal system or septic tank.
- Hot water — "yes" was recorded in case it was received through the hot water tap in the dwelling. Whether hot water was

received from an external network or from the boiler in the dwelling was insignificant.

- Bath (shower) — "yes" was recorded in case the dwelling was equipped with a fixed bath or shower that was connected to a sewage disposal system. The way of receiving hot water is insignificant.
- Sauna — "yes" was recorded in case sauna had been built into the apartment, one-family house or any other small residential building, also in case sauna was in a separate building in the grounds of one-family house or of any other small residential building (i.e. outside the dwelling). Public saunas built in the cellars of the apartment buildings were not included here.
- Flush toilet — "yes" was recorded in case faeces went into a sewage disposal system with the water coming from a water supply system.
- Electricity — "yes" was recorded in case the dwelling was connected to a permanent source of electrical energy twenty-four hours a day.
- Gas — "yes" was recorded in the case of the availability of either network or liquid gas (cylinder), irrespective of its way of use. In corridor type of houses where several families shared the kitchen, all the dwellings (rooms) were regarded as equipped with gas in case there were fixed gas ovens in the kitchen.
- Central heating — "yes" was recorded in case the dwelling was heated through a heat supply pipeline either from a central or a local boiler house, also in the case of the use of a gas heater or a small boiler working with gas or solid fuel. There can be several heating systems in the dwelling at the same time (central heating, electric heating, stove heating); "yes" was recorded in case the central heating was the main (mostly used) heating system.
- Electric heating — "yes" was recorded in case fixed electric heating equipment (electric heaters) was used in the dwelling and it was the main heating system.

Conventional dwelling — see Dwelling.

Dwelling — family dwelling, apartment or other separate room suitable for all-the-year-round habitation. In addition rooms which were not designed for permanent habitation were considered to be dwellings if at the Census moment at least one person was residing there permanently. Dwellings

were classified as conventional dwellings, non-conventional dwellings and accommodation rooms. In this publication only conventional dwellings are covered (excluding table 37).

- *Conventional dwelling — family dwelling, part of the family dwelling, apartment or separate living room(s). The Census covered all conventional dwellings regardless of whether some person lived there or not at the Census moment. The conventional dwellings were distributed as follows:*
  - a. *family dwelling — a small residential building (including farmhouse, housing unit of row house and semi-detached house or former summer cottage that has been rebuilt for all-the-year-round habitation), which comprises one dwelling.*
  - b. *part of the family dwelling — family house is divided into several dwellings (with separate entrances and secondary rooms or only separate kitchens).*
  - c. *apartment — dwelling (with secondary rooms) that is entirely isolated from other dwellings and allow running a household. Kitchenettes and dwellings provided by the employer are also regarded as apartments.*
  - d. *separate living room(s) — isolated rooms in hostel-type houses that are currently not used as accommodation rooms (e.g. privatised room in a former hostel).*
- *Non-conventional dwelling (non-dwelling used for habitation) — these comprise miscellaneous rooms converted for human habitation (storage, mill, garage, etc.), summer cottages that are not suitable for all-the-year-round habitation, caravans, trailers, boathouses, ships, if at the Census moment at least one household was living there permanently. These do not include accommodation rooms for passengers on board the ships or in train compartments, these were not regarded as dwellings.*
- *Accommodation room — room at the hostel, hotel, camping grounds, motel, boarding house, sports and recreation centre, rest home, guesthouse, tourism farm, etc. that, in principle, is meant for temporary use (the household has no*

*property right) but was the permanent place of residence of at least one person at the Census moment.*

Household — persons who live together at the same address and are linked by a common use of all available household facilities (shared budget and shared food). A person living alone is also considered a separate household. Blood relationship or relationship by marriage between household members was not necessarily required. If a person shared a dwelling with some other person but bought food himself/herself and had a separate budget, then he/she was considered a separate household. In this publication only households living in conventional dwellings are covered.

Moment of Census — the date and the time referring to the data collected in the Census. The moment of the 2000 Population Census was on 31 March 2000 at 00.00.

Number of rooms in the dwelling — room is a living room, bedroom, nursery, study, attic, dining room, etc. If a permanent wall between a room and a kitchen was missing (for example, it had been torn down) the kitchen was regarded as part of the room. Kitchen, entrance hall, toilet, bathroom, pantry, sauna rooms and other secondary rooms were not counted as rooms. Kitchenette and a room in a building of a hostel type (if the room was used separately as a dwelling) were counted as rooms. Rooms that were used only for business or work purposes did not count as rooms.

Occupancy of dwelling — conventional dwellings were distributed by the occupancy as follows:

- *Occupied dwelling — dwelling was occupied if at the Census moment it was a permanent place of residence of at least one person.*
- *Reserved dwelling — dwelling which was not a permanent place of residence of any person but temporary inhabitants were living there or the owner had reserved it for seasonal or secondary use (e.g. farmhouses used for living in summer).*
- *Vacant dwelling — dwelling was vacant if at the Census moment it was not a permanent place of residence of any person and it was not reserved. Only these vacant dwellings were counted that were suitable for all-the-year-round use.*

Owner of dwelling — conventional dwellings were distributed by the owner of dwelling as follows:

- State — dwelling is owned by a state agency or national organisation (fund).
- Local government — dwelling is owned by a city (city district) or rural municipality.
- Person residing in Estonia — the permanent place of residence of the owner of the dwelling is in Estonia.
- Person residing in a foreign country — the permanent place of residence of the owner of the dwelling is outside of the Republic of Estonia.
- Dwelling association — the owner of the dwelling is a dwelling association (dwelling co-operative). Member of the apartment association who is an owner of the dwelling is not taken into account here.
- Other — the owner of the dwelling is, for example, a commercial undertaking, church or any other non-profit institution, foundation, etc.

Place of residence (usual place of residence) — administrative unit or settlement, where the dwelling in which the person lived permanently at the time of the Census, was located. The permanent place of residence was the place where the person intended to live or where he/she had lived for at least one year. For the person who had more than one place of residence, the permanent place of residence was the place where his/her household was living. The permanent place of residence of university students and of pupils of professional secondary or other vocational education institutions living in the study area was the dwelling where the studies took place (not the place of residence of parents). An institution was considered the permanent place of residence of persons, who had lived in an institution (social welfare institutions, prisons, etc.) for more than a year or who would stay there for more than a year. The permanent place of residence of persons in military service was the place where they had departed from for military service. The permanent place of residence of the diplomatic staff of diplomatic missions and consular posts of the Republic of Estonia and their household members who had been in a foreign country at the time of the Census was their place of residence in Estonia. The permanent place of residence of homeless persons was the settlement where they had been enumerated.

Residential building — building at least 50% of area of which is used for permanent habitation. Residential buildings are apartment buildings, one-family houses and other small residential buildings (see Type of building).

Time of construction of the building — the period, which includes the year of official completion of the building (taken into exploitation). If the building had undergone reconstruction, extension etc., the period containing the year of first completion of the building was still recorded as construction time (excluding the case when the building had been completely destroyed and then rebuilt). "Uncompleted building" was recorded in the case of a building some rooms of which were already used for permanent habitation although the local government had not given the permission to use it.

Type of building — buildings containing conventional dwellings were distributed as residential buildings and non-residential buildings. Residential buildings include apartment buildings, one-family houses and other small residential buildings.

- Apartment building — consists of at least three apartments that generally have an entrance in a common entrance hall or corridor.
- One-family house — residential building originally designed and built for one family where also many households may live and which is not divided into apartments. Also farmhouses and former summer cottages rebuilt for all-the-year-round habitation are included here. If the one-family house had been rebuilt into two isolated apartments, the answer "other small residential building" was recorded. The concept of "one-family house" differs from the concept of "family dwelling". The latter indicates the type of dwelling and includes also the housing unit of row house and semi-detached house. One-family house as the type of building includes only one-family house that is not divided into apartments.
- Other small residential building is:
  - a. a semi-detached residential building, which consists of two family houses situated in two neighbouring grounds and built together by their sides (as an exception also a residential building with two entrances locating in the same grounds — two-family house);

- b. a row house which consists of at least three family houses (one housing unit of a row house) with separate entrances and connected with one another by a fire wall or a roof;
- c. family house with two apartments built inside of it.
- Non-residential building is:
  - a. building, approximately less than 50% of the useful area of which is used for habitation;
  - b. accommodation building — building, at least 50% of the useful area of which is used for accommodation

(e.g., hostel, hotel, camping grounds, motel, boarding house, sports and recreation centre, rest home, guest house, tourism farm, etc.). Only accommodation buildings containing dwellings were counted.

- c. other non-residential building which at the Census moment was a permanent place of residence of at least one person.

*Type of dwelling — see Dwelling.*

*Unknown — the table's row or column "unknown" includes cases where the answer has not been recorded in the questionnaire or the answer that has been recorded is ambiguous.*
