## SISUKORD

Rahvastiku ja leibkondade elamistingimused .....	9
Diagrammid	
Diagramm 1. Rahvastik eluruumi tüübi järgi, 2000 .....	29
Diagramm 2. Rahvastik rahvuse ja eluruumi tüübi järgi, 2000 .....	29
Diagramm 3. Rahvastik maakondades hoone ehitusaja järgi, 2000 .....	30
Diagramm 4. Eestlased ja mitte-eestlased hoone ehitusaja järgi, 2000 .....	30
Diagramm 5. Tallinna rahvastik eluruumi tubade ja elanike arvu suhte järgi, 2000 .....	31
Diagramm 6. Rahvastik eluruumi pinna järgi elaniku kohta, 2000 .....	31
Diagramm 7. Linnade ja valdade rahvastik eluruumi tehovarustatuse järgi, 2000 .....	32
Diagramm 8. Eestlased ja mitte-eestlased eluruumi tehovarustatuse järgi, 2000 .....	32
Diagramm 9. Rahvastik töölase ja sotsiaal-majandusliku staatuse ning eluruumi pinna järgi elaniku kohta, 2000 .....	33
Diagramm 10. Keskkütte või elekterküttega eluruumides elava rahvastiku osatähtsus töölase ja sotsiaal-majandusliku staatuse järgi, 2000 .....	33
Diagramm 11. Leibkonnad hoone ehitusaja järgi, 2000 .....	34
Diagramm 12. Leibkonnad suuruse ja eluruumi tüübi järgi, 2000 .....	34
Diagramm 13. Eluruumi keskmine pind leibkonnaliikme kohta leibkonna suuruse järgi, 2000 .....	35
Diagramm 14. Asustatud eluruumid tubade ja elanike arvu järgi, 2000 .....	35
Diagramm 15. Keskmine tubade arv elaniku kohta eluruumi tubade arvu järgi, 2000 .....	36
Diagramm 16. Leibkonnad suuruse ja eluruumi tehovarustatuse järgi, 2000 .....	36
Diagramm 17. Leibkondade koosseis ja eluruumi pind leibkonnaliikme kohta, 2000 .....	37
Diagramm 18. Leibkonnad koosseisu ja eluruumi kasutamise aluse järgi, 2000 .....	37
Diagramm 19. Pereelamus elavate lastega leibkondade osatähtsus alla 18-aastaste laste arvu järgi, 2000 .....	38
Diagramm 20. Alla 18-aastaste lastega leibkonnad laste arvu ja eluruumi tehovarustatuse järgi, 2000 .....	38
Teemakaardid	
Teemakaart 1. Pereelamus elava rahvastiku osatähtsus haldusüksustes, 2000 .....	39
Teemakaart 2. Leibkonnaliikme omanduses olevas eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000 .....	40
Teemakaart 3. Elanike arvust väiksema tubade arvuga eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000 .....	41
Teemakaart 4. Veevärgiga eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000 .....	42
Teemakaart 5. Keskkütte või elekterküttega eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000 .....	43
Teemakaart 6. Ühe leibkonnaga eluruumide osatähtsus maakondades ning leibkondade jaotus elukoha järgi, 2000 .....	44
Teemakaart 7. Pereelamutes elavate leibkondade osatähtsus maakondades, 2000 .....	44
Diagrammid .....	45
Teemakaardid .....	46
Tabelid	
Tabel 1. Asustatud tavaeluruumidega hooned, tavaeluruumid, leibkonnad ja elanikud hoone liigi järgi, 2000 .....	52
Tabel 2. Asustatud tavaeluruumid, leibkonnad ja elanikud eluruumi tüübi järgi, 2000 .....	53
Tabel 3. Tavaeluruumide rahvastik rahvuse ja eluruumi tüübi järgi, 2000 .....	54
Tabel 4. Asustatud tavaeluruumid, leibkonnad ja elanikud eluruumi tubade arvu järgi, 2000 .....	55
Tabel 5. Asustatud tavaeluruumid, leibkonnad ja elanikud hoone liigi ja ehitusaja järgi, 2000 .....	56
Tabel 6. Asustatud tavaeluruumid, leibkonnad ja elanikud hoone liigi ja ehitusaja järgi, 2000 (protsenti) .....	58
Tabel 7. Tavaeluruumides elavad eestlased ja mitte-eestlased hoone liigi ja ehitusaja järgi, 2000 .....	60
Tabel 8. Tavaeluruumides elavad eestlased ja mitte-eestlased hoone liigi ja ehitusaja järgi, 2000 (protsenti) .....	62
Tabel 9. Asustatud tavaeluruumid, leibkonnad ja elanikud eluruumi omaniku järgi, 2000 .....	64
Tabel 10. Asustatud tavaeluruumid, leibkonnad ja elanikud hoone liigi ja eluruumi tehovarustatuse järgi, 2000 .....	66
Tabel 11. Asustatud tavaeluruumid, leibkonnad ja elanikud hoone liigi ja eluruumi tehovarustatuse järgi, 2000 (protsenti) .....	68

Tabel 12. Tavaeluruumides elavad eestlased ja mitte-eestlased hoone liigi ja eluruumi tehnovarustatuse järgi, 2000 .....	70
Tabel 13. Tavaeluruumides elavad eestlased ja mitte-eestlased hoone liigi ja eluruumi tehnovarustatuse järgi, 2000 (protsenti) .....	72
Tabel 14. Asustatud tavaeluruumid tüübi, tubade ja elanike arvu järgi, 2000 .....	74
Tabel 15. Asustatud tavaeluruumid linnades tüübi, tubade ja elanike arvu järgi, 2000 .....	76
Tabel 16. Asustatud tavaeluruumid valdades tüübi, tubade ja elanike arvu järgi, 2000 .....	78
Tabel 17. Asustatud tavaeluruumid Tallinnas tüübi, tubade ja elanike arvu järgi, 2000 .....	80
Tabel 18. Asustatud tavaeluruumid omaniku, tubade ja elanike arvu järgi, 2000 .....	82
Tabel 19. Asustatud tavaeluruumid linnades omaniku, tubade ja elanike arvu järgi, 2000 .....	86
Tabel 20. Asustatud tavaeluruumid valdades omaniku, tubade ja elanike arvu järgi, 2000 .....	90
Tabel 21. Asustatud tavaeluruumid Tallinnas omaniku, tubade ja elanike arvu järgi, 2000 .....	94
Tabel 22. Asustatud tavaeluruumid, leibkonnad ja elanikud eluruumi tehnovarustatuse ja omaniku järgi, 2000 .....	98
Tabel 23. Tavaeluruumide leibkonnad suuruse ja eluruumi tüübi järgi, 2000 .....	102
Tabel 24. Tavaeluruumide leibkonnad üksik- või jagatud asustuse, koosseisu ja suuruse järgi, 2000 .....	104
Tabel 25. Tavaeluruumide leibkonnad linnades üksik- või jagatud asustuse, koosseisu ja suuruse järgi, 2000 .....	108
Tabel 26. Tavaeluruumide leibkonnad valdades üksik- või jagatud asustuse, koosseisu ja suuruse järgi, 2000 .....	112
Tabel 27. Tavaeluruumide leibkonnad Tallinnas üksik- või jagatud asustuse, koosseisu ja suuruse järgi, 2000 .....	116
Tabel 28. Tavaeluruumide leibkonnad koosseisu, suuruse ja eluruumi tüübi järgi, 2000 .....	120
Tabel 29. Tavaeluruumide leibkonnad koosseisu, suuruse ja tubade arvu järgi, 2000 .....	124
Tabel 30. Tavaeluruumide leibkonnad üksik- või jagatud asustuse, leibkonna koosseisu ja pinna järgi elaniku kohta, 2000 .....	130
Tabel 31. Tavaeluruumide leibkonnad linnades üksik- või jagatud asustuse, leibkonna koosseisu ja pinna järgi elaniku kohta, 2000 .....	134
Tabel 32. Tavaeluruumide leibkonnad valdades üksik- või jagatud asustuse, leibkonna koosseisu ja pinna järgi elaniku kohta, 2000 .....	138
Tabel 33. Tavaeluruumide leibkonnad Tallinnas üksik- või jagatud asustuse, leibkonna koosseisu ja pinna järgi elaniku kohta, 2000 .....	142
Tabel 34. Tavaeluruumide leibkonnad koosseisu, eluruumi tüübi ja pinna järgi elaniku kohta, 2000 .....	146
Tabel 35. Tavaeluruumide leibkonnad üksik- või jagatud asustuse, suuruse ja eluruumi pinna järgi elaniku kohta, 2000 .....	150
Tabel 36. Tavaeluruumide leibkonnad linnades üksik- või jagatud asustuse, suuruse ja eluruumi pinna järgi elaniku kohta, 2000 .....	152
Tabel 37. Tavaeluruumide leibkonnad valdades üksik- või jagatud asustuse, suuruse ja eluruumi pinna järgi elaniku kohta, 2000 .....	154
Tabel 38. Tavaeluruumide leibkonnad Tallinnas üksik- või jagatud asustuse, suuruse ja eluruumi pinna järgi elaniku kohta, 2000 .....	156
Tabel 39. Tavaeluruumide leibkonnad suuruse, eluruumi tüübi ja pinna järgi elaniku kohta, 2000 .....	158
Tabel 40. Leibkonnad suuruse, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	160
Tabel 41. Leibkonnad elukoha, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	162
Tabel 42. Leibkonnad koosseisu, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	168
Tabel 43. Leibkonnad linnades koosseisu, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	170
Tabel 44. Leibkonnad valdades koosseisu, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	172
Tabel 45. Leibkonnad Tallinnas koosseisu, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	174
Tabel 46. Tavaeluruumide leibkonnad eluruumi tehnovarustatuse ja leibkonna suuruse järgi, 2000 .....	176
Tabel 47. Tavaeluruumide leibkonnad linnades eluruumi tehnovarustatuse ja leibkonna suuruse järgi, 2000 .....	178
Tabel 48. Tavaeluruumide leibkonnad valdades eluruumi tehnovarustatuse ja leibkonna suuruse järgi, 2000 .....	180
Tabel 49. Tavaeluruumide leibkonnad Tallinnas eluruumi tehnovarustatuse ja leibkonna suuruse järgi, 2000 .....	182
Tabel 50. Tavaeluruumide leibkonnad koosseisu ja eluruumi tehnovarustatuse järgi, 2000 .....	184
Tabel 51. Tavaeluruumide leibkonnad linnades koosseisu ja eluruumi tehnovarustatuse järgi, 2000 .....	186
Tabel 52. Tavaeluruumide leibkonnad valdades koosseisu ja eluruumi tehnovarustatuse järgi, 2000 .....	188
Tabel 53. Tavaeluruumide leibkonnad Tallinnas koosseisu ja eluruumi tehnovarustatuse järgi, 2000 .....	190
Tabel 54. Tavaleibkondade rahvastik elukoha, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000 .....	192

Tabel 55. Tavaleibkondade rahvastik eluruumi tüübi ja eluruumi kasutamise aluse ning soo ja isiku staatuse järgi leibkonnas, 2000 .....	208
Tabel 56. Tavaleibkondades elav linnade rahvastik eluruumi tüübi ja eluruumi kasutamise aluse ning soo ja isiku staatuse järgi leibkonnas, 2000 .....	210
Tabel 57. Tavaleibkondades elav valdade rahvastik eluruumi tüübi ja eluruumi kasutamise aluse ning soo ja isiku staatuse järgi leibkonnas, 2000 .....	212
Tabel 58. Tavaleibkondades elav Tallinna rahvastik eluruumi tüübi ja eluruumi kasutamise aluse ning soo ja isiku staatuse järgi leibkonnas, 2000 .....	214
Tabel 59. Tavaeluruumide rahvastik vanuse, eluruumi tubade ja elanike arvu järgi, 2000 .....	216
Tabel 60. Tavaeluruumide rahvastik vanuse, eluruumi tubade ja elanike arvu järgi, 2000. Eestlased .....	220
Tabel 61. Tavaeluruumide rahvastik vanuse, eluruumi tubade ja elanike arvu järgi, 2000. Mitte-eestlased ....	224
Tabel 62. Rahvastik vanuse, eluruumi tüübi ja tavaeluruumi tehnovarustatuse järgi, 2000 .....	228
Tabel 63. Rahvastik vanuse, eluruumi tüübi ja tavaeluruumi tehnovarustatuse järgi, 2000. Eestlased .....	238
Tabel 64. Rahvastik vanuse, eluruumi tüübi ja tavaeluruumi tehnovarustatuse järgi, 2000. Mitte-eestlased ...	248
Tabel 65. Tavaeluruumide rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ja tehnovarustatuse järgi, 2000 .....	258
Tabel 66. Tavaeluruumides elav linnade rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ja tehnovarustatuse järgi, 2000 .....	262
Tabel 67. Tavaeluruumides elav valdade rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ja tehnovarustatuse järgi, 2000 .....	266
Tabel 68. Tavaeluruumides elav Tallinna rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ja tehnovarustatuse järgi, 2000 .....	270
Tabel 69. Rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ning eluruumi pinna järgi elaniku kohta, 2000 .....	274
Tabel 70. Linnade rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ning eluruumi pinna järgi elaniku kohta, 2000 .....	278
Tabel 71. Valdade rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ning eluruumi pinna järgi elaniku kohta, 2000 .....	282
Tabel 72. Tallinna rahvastik tööalase ja sotsiaal-majandusliku staatuse, eluruumi tüübi ning eluruumi pinna järgi elaniku kohta, 2000 .....	286
Tabel 73. Tavaeluruumide rahvastik elukoha ja eluruumi pinna järgi elaniku kohta, 2000 .....	290
Tabel 74. Tavaeluruumide rahvastik vanuse ja eluruumi pinna järgi elaniku kohta, 2000 .....	306
Tabel 75. Mehed tavaeluruumides vanuse ja eluruumi pinna järgi elaniku kohta, 2000 .....	310
Tabel 76. Naised tavaeluruumides vanuse ja eluruumi pinna järgi elaniku kohta, 2000 .....	314
Tabel 77. Tavaeluruumide rahvastik vanuse ja eluruumi pinna järgi elaniku kohta, 2000. Eestlased .....	318
Tabel 78. Tavaeluruumide rahvastik vanuse ja eluruumi pinna järgi elaniku kohta, 2000. Mitte-eestlased ....	322
Tabel 79. Rahvastik elukoha ja eluruumi tüübi järgi, 1989 .....	326
Tabel 80. Rahvastik elukoha ja hoone ehitusaja järgi, 1989 .....	332
Tabel 81. Rahvastik elukoha ja eluruumi pinna järgi elaniku kohta, 1989 .....	338
Tabel 82. Rahvastik elukoha ja eluruumi tehnovarustatuse järgi, 1989 .....	344
Mõisted .....	350

## RAHVASTIKU JA LEIBKONDADE ELAMISTINGIMUSED

Kogumik käsitleb rahvastiku ja leibkondade elamistingimusi 2000. aasta rahva ja eluruumide loenduse andmete põhjal. Vaadeldakse rahvastiku ja leibkondade jaotust eluruumi tüübi, hoone ehitusaja, eluruumi omaniku, kasutamise aluse, tehnovarustatuse jm tunnuste järgi. Käsitletakse elamistingimuste seost rahvastiku tööalase ja sotsiaal-majandusliku staatuse, rahvuse ning leibkonna suuruse ja koosseisuga. Esitatakse ka 1989. aasta loenduse tulemusi rahvastiku elamistingimuste kohta<sup>1</sup>.

### Rahvastiku elamistingimused

Valdav osa rahvastikust elab tavaeluruumis, s.o eluruumis, mis on kavandatud ühele leibkonnale alaliseks elamiseks. Muud tüüpi eluruumis elas 2000. aasta loenduse ajal rahvastikust 2%. Loendatud 1 370 052 inimest jagunesid selle järgi, mis tüüpi eluruumis nad elasid, nii:

- tavaeluruum — 1 335 142 inimest (97,5%);
- majutusruum — 13 331 inimest (1,0%);
- elamiseks kasutatav mitteiluruum (ehk mitte-tavaeluruum) — 1 926 inimest (0,1%);
- institutsiooniruum — 12 625 inimest (0,9%).

Eluruumi tüüp jäi teadmata 6659 inimesel (0,5%), kodutuid, s.o ilma eluruumita inimesi loendati 369 (0,03%). Majutusruumide elanikest olid enamik (üli)õpilased (70,4%) ja töötajad (14,5%). Institutsioonidest oli kõige rohkem elanikke hoolekandeesutustes ja kinnipidamisasutustes. Võrreldes eelmise, 1989. aasta loendusega vähenes majutusruumide elanike arv järsult: 1989. aastal loendati ühiselamutes 80 242 inimest. Ehkki tollal loeti ühiselamuks ka vanurite ja invaliidide internaatkodud, mida 2000. aastal käsitleti institutsioonina, on majutusruumide elanike arvu mitmekordne vähenemine kahe loenduse vahel ilmne.

Tabel A. Tavaeluruumide rahvastik eluruumi tüübi järgi, 2000

Eluruumi tüüp	Tavaeluruumide rahvastik			
	kokku	linnad	sh Tallinn	vallad
<b>Arv</b>				
Kokku	1 335 142	903 567	392 129	431 575
Pereelamu	366 246	126 047	32 507	240 199
Osa pereelamust	37 584	23 852	8 870	13 732
Korter	925 485	748 177	347 395	177 308
Omaette tuba (toad)	5 827	5 491	3 357	336
<b>Protsent</b>				
Kokku	100,0	100,0	100,0	100,0
Pereelamu	27,4	14,0	8,3	55,6
Osa pereelamust	2,8	2,6	2,3	3,2
Korter	69,3	82,8	88,6	41,1
Omaette tuba (toad)	0,5	0,6	0,8	0,1

Et edaspidi käsitletakse vaid tavaeluruumides elava rahvastiku elamistingimusi, hõlmavad terminid “rahvastik” ja “elanikud” vaid tavaeluruumis elavaid inimesi.

Elamistingimused sõltuvad suuresti eluruumi tüübist. 69,8% rahvastikust elas korteris või

ühiselamu tüüpi maja omaette toas<sup>2</sup> (tabel A, diagramm 1). Pereelamus või selle osas elas rahvastikust 30,2%. Linnades oli korteris elava rahvastiku osatähtsus kaks korda suurem kui valdades. Valdades oli domineeriv eluruumi tüüp pereelamu. Pereelamus elava rahvastiku osatähtsust haldusüksustes kajastab teemakaart 1.

<sup>1</sup> Kahe viimase loenduse tulemused ei ole päris võrreldavad, sest eluruumi tüüpe määratleti erinevalt (vt mõisted). Mõnevõrra erines ka nende elanike ring, kellelt küsiti kõiki elamistingimusi iseloomustavaid andmeid — 2000. aastal olid hõlmatud vaid tavaeluruumide elanikud, 1989. aastal peale selle ka ühiselamute elanikud.

<sup>2</sup> Toad, mida ei kasutatud majutusruumina. Jooksvas statistikas loetakse seda tüüpi eluruumid korteriks ning ka käesolevas ülevaates vaadeldakse neid mõnikord korteritega koos.

Korterimajade hulgas on valdavalt suured paljukorterilised elamud. Alla 10 korteriga elamus elas vaid 13,2% ja alla 30 korteriga elamus 35,0% korterimajade (paljukorteriliste elamute) elanikest. Valdades oli väiksema eluruumide arvuga korter-

majas elava rahvastiku osatähtsus oluliselt suurem — seal elas alla 30 korteriga elamus korterimajade elanikest 82,6%. Sellest tingituna oli keskmine elanike arv valdade korterimajades 2,3 korda väiksem kui linnade korterimajades (tabel B).

Tabel B. Keskmiselt elanikke tavaeluruumidega hoonetes hoone liigi järgi, 2000

Hoone liik	Kokku	Linnad	sh Tallinn	Vallad
Kokku	8,3	14,7	22,9	4,3
Paljukorteriline elamu	43,2	53,7	66,1	23,4
Ühepereelamu	2,8	3,0	3,4	2,7
Muu väikeelamu	5,3	5,4	5,5	5,2
Mitte-elamu	3,2	3,6	3,8	2,9
Teadmata	4,7	4,7	5,2	4,8

Linna ühepereelamus elas keskmiselt veidi rohkem inimesi kui valla sama tüüpi elamus. Valla ühepereelamus elas suhteliselt rohkem üksikuid inimesi ja vähem 3–4 liikmega leibkondi kui linnas.

Tabel C. Tavaeluruumide rahvastik hoone liigi ja ehitusaaja järgi, 2000  
(% rahvastikust, kelle hoone ehitusaeg on teada)

Hoone ehitusaeg	Kõik hoone liigid			Paljukorteriline elamu			Ühepereelamu ja muu väikeelamu		
	kokku	linnad	vallad	kokku	linnad	vallad	kokku	linnad	vallad
Kokku	100,0	100,0	100,0	100,0	100,0	100,0	100,0	100,0	100,0
Enne 1946	19,1	12,1	33,9	8,2	8,9	5,2	42,3	25,1	52,4
1946–1960	9,9	10,6	8,3	7,5	7,9	5,8	15,1	24,2	9,8
1961–1970	19,1	22,0	12,9	22,1	22,7	19,7	12,4	19,5	8,3
1971–1980	22,9	25,6	17,3	28,8	28,5	30,3	10,3	12,5	9,0
1981–1990	23,3	24,6	20,5	29,6	28,2	35,6	9,7	7,5	10,9
1991 või hiljem	4,8	4,5	5,5	3,7	3,7	3,4	7,5	8,6	7,0
Ehitus pooleli	0,9	0,6	1,6	0,1	0,1	0,0	2,7	2,6	2,6

Suurem osa (65%) tavaeluruumide elanikest elas aastatel 1961–1990 ehitatud hoones (tabel C, diagramm 3). See oli periood, mida iseloomustab suur ehitusintensiivsus. Oli vaja taastada II maailmasõjas hävinud elamispiind ning ehitada uut elamispiinda linnadesse, kuhu koondus üha enam majandustegevus. Suuresti oli elamuehituse kiire kasv seotud selle perioodi aktiivse immigratsiooniga. Enne 1961. aastat ehitatud hoonetes elas elanikest 29% ja pärast 1990. aastat ehitatud hoonetes 6%.

Et pärast II maailmasõda keskendus elamuehitus järjest enam linnadesse ning valdavalt ehitati paljukorterilisi elamuid, on linnade elamud valdade elamutega võrreldes keskmiselt uuemad ning korterelamud keskmiselt uuemad kui väikeelamud. Näiteks elas pärast 1960. aastat ehitatud majas linnade elanikest 77% ja valdade elanikest 58%.

Paljukorteriliste elamute elanikest elas pärast 1960. aastat ehitatud majas valdav osa — 84%, väikeelamute elanikest ligi kaks korda vähem (43%). Linnades on uuemaid väikeelamuid rohkem kui valdades.

1990-ndatel aastatel toimunud eluruumide erastamise ja endistele omanikele tagastamise tulemusel elas 2000. aasta alguses enamik elanikest erasektorile kuuluvas eluruumis.

Eluruumi omaniku järgi jaotusid elanikud nii:

- avalik sektor (riik ja kohalik omavalitsus) — 3,3%;
- erasektor — 95,2%;  
sh eraisik — 90,1%;  
elamuühistu — 4,1%;  
muu omanik — 1,0%.

1,5% elanikest elas eluruumis, mille omaniku kohta jäid loendusel andmed saamata. 1989. aastal elas riiklikele, kooperatiivsetele (v.a elamuehituskooperatiivid) ja ühiskondlikele organisatsioonidele kuuluvates hoonetes ligi 75% nendest elanikest, kelle eluruumi tüüp oli loendusel märgitud<sup>1</sup>. Selle elamispinna said elanikud tasuta ning nende üüri subsideeriti. Valdavalt riigile kuuluva elamispinna üleminek eraomandusse ning turusuhetel põhineva elamumajanduse kujunemine on suurim muutus, mis on 1989. aasta ja 2000. aasta loenduse vahel rahvastiku elamistingimustes toimunud. Inimeste reaalsed elamistingimused (olmemugavused, eluruumi tüüp jm) on kahe loenduse vahel muutunud suhteliselt vähe, küll aga on oluliselt kasvanud eluasemekulutused.

Kuigi suurem osa inimestest elas 2000. aastal erasektorile kuuluvas eluruumis, ei elanud paljudes eluruumides omanik, vaid üürnikud või kasutati eluruumi muul alusel.

Omaniku või elamuühistu liikmena kasutas eluruumi 83,7% elanikest (tabel D). Eluruumi omanike või elamuühistu liikmete (st omanik või elamuühistu liige oli üks leibkonnaliikmetest) osatähtsus kokku oli linnades ja valdades võrdne.

Valdades, kus elamuühistuid oli moodustatud väga vähe, elas enda omanduses olevas eluruumis rohkem elanikke kui linnades. Leibkonnaliikme omanduses olevas eluruumis elava rahvastiku osatähtsust haldusüksustes kajastab teemakaart 2. Üürnikuna kasutas eluruume 14,3% elanikest, linnades veidi rohkem kui valdades. Keskmisest märgatavalt enam oli üürnikke 20–29-aastaste noorte hulgas (24,1%).

Tabel D. Tavaeluruumide rahvastik eluruumi kasutamise aluse järgi, 2000

(% rahvastikust, kelle eluruumi kasutamise alus on teada)

Eluruumi kasutamise	Tavaeluruumide rahvastik		
	kokku	linnad	vallad
Kokku	100,0	100,0	100,0
Omanik	79,9	78,1	83,5
Elamuühistu liige	3,8	5,6	0,3
Üürnik	14,3	14,6	13,7
Muu	2,0	1,7	2,5

Tabel E. Tavaeluruumide rahvastiku majutustiheduse näitajad eluruumi tüübi<sup>2</sup> järgi, 2000

	Kõigi tavaeluruumide rahvastik			Pereelamute rahvastik			Korterite rahvastik		
	kokku	linnad	vallad	kokku	linnad	vallad	kokku	linnad	vallad
Kogurahvastik, protsenti	100,0	100,0	100,0	100,0	100,0	100,0	100,0	100,0	100,0
tube elanikest rohkem	26,4	22,6	34,3	46,0	49,3	44,1	17,9	17,3	20,4
tube niisama palju kui elanikke	29,5	32,2	24,0	21,4	22,5	20,7	33,0	34,1	28,6
tube elanikest vähem	43,9	45,0	41,5	32,3	27,9	34,9	48,9	48,4	50,9
tubade arv teadmata	0,2	0,2	0,2	0,3	0,3	0,3	0,2	0,2	0,1
Keskmiselt tube elaniku kohta	1,06	1,01	1,17	1,31	1,34	1,30	0,95	0,95	0,97
Keskmiselt pinda <sup>3</sup> elaniku kohta, m <sup>2</sup>	24,0	22,4	27,2	30,9	30,0	31,4	21,0	20,9	21,2

<sup>1</sup> Nende hulgas olid ka ühiselamute elanikud.

<sup>2</sup> Kui eluruumi tüüpe "osa pereelamust" ja "omaette tuba (toad)" ei ole eraldi välja toodud, hõlmab termin "pereelamu" ka osa pereelamust ja termin "korter" omaette tuba.

<sup>3</sup> Siin ja edaspidi mõistetakse pinna all eluruumi kasulikku pinda ehk üldpinda.

Oluline elamistingimuste kvaliteedi näitaja on privaatsus ja eraldatus. Vaid veidi üle veerandi (26,4%) tavaeluruumide rahvastikust elas eluruumis, kus tube on rohkem kui elanikke (tabel E). Valdades oli selliseid inimesi suhteliselt rohkem kui linnades ning pereelamutes suhteliselt rohkem kui korterelamutes. Kõige rohkem oli avarates tingimustes elavaid inimesi linnade pereelamutes (49,3%). Ligi 30% tavaeluruumide rahvastikust elas eluruumis, kus tube on niisama palju kui elanikke. Ülerahvastatud oludes, kus tube on vähem kui elanikke, elas tavaeluruumide elanikest 43,9%. Korteri elanikest elas ülerahvastatud tingimustes ligi pool (48,9%). Rahvastiku majutustiheduse erinevusi haldusüksustes illustreerib teemakaart 3 ja Tallinna linnaosades diagramm 5.

Keskmiselt oli loenduse andmete järgi Eestis elaniku kohta 1,06 tuba ja 24,0 ruutmeetrit pinda

(tabel E). Korteri puhul olid need näitajad märgatavalt väiksemad kui pereelamute puhul. Et linnades oli korteri osatähtsus suur, oli seal ka elaniku kohta keskmiselt vähem tube ja pinda. Tallinnas elati üsna kitsastes tingimustes — elaniku kohta oli 0,97 tuba ja 21,8 ruutmeetrit pinda. Tavaeluruumide rahvastiku jaotust elaniku kohta tuleva eluruumi pinna järgi kajastab diagramm 6. Väga kitsastes tingimustes, kus elaniku kohta oli pinda alla 9 ruutmeetri, elas rahvastikust 3,2%. Ligikaudu niisama palju (3,1%) oli neid, kelle eluruumis oli elaniku kohta pinda üle 60 ruutmeetri. Poolte elanike eluruumis oli inimese kohta pinda 9–20 ruutmeetrit. Väga kitsastes oludes elavaid inimesi oli suhteliselt enam valdades asuvates korterites, väga avarates oludes elavaid inimesi aga valdade pereelamutes, kus 8,6%-l elanikest oli pinda üle 60 ruutmeetri elaniku kohta.

Tabel F. Tavaeluruumide rahvastik eluruumi tüübi ja tehnoarustatuse järgi, 2000 (protsenti)

Tehnoarustuse liik	Kõigi tavaeluruumide rahvastik			Pereelamute rahvastik			Korteri rahvastik		
	kokku	linnad	vallad	kokku	linnad	vallad	kokku	linnad	vallad
Veevärk	87,6	95,8	70,4	66,3	85,0	55,3	96,9	98,0	92,1
Veeklosett	76,9	88,6	52,4	39,4	55,2	30,1	93,1	95,2	84,3
Soe vesi	70,9	81,5	48,9	45,4	58,2	37,8	82,0	86,1	64,7
Vann (dušš)	73,6	84,0	51,9	39,9	53,0	32,2	88,3	90,2	80,1
Saun	19,5	10,1	39,0	61,0	55,4	64,3	1,5	1,1	3,0
Gaas	39,4	42,4	33,2	33,5	28,1	36,6	42,0	45,2	28,4
Keskküte	63,2	77,1	34,1	23,4	31,9	18,3	80,5	86,1	56,8
Elekterküte	6,8	5,8	8,7	10,7	17,1	6,9	5,1	3,6	11,4

Linnades, kus elamufond uuem ning ülekaalus paljukorteriliste elamute eluruumid, oli elanikel olmemugavusi oluliselt enam kui valdades. Näiteks oli keskküttega või elekterküttega eluruumis elavaid elanikke linnades suhteliselt enam 1,9 korda, sooja vee ja veeklosetiga eluruumis elavaid 1,7 korda ning veevärgi ja kanalisatsiooniga eluruumis elavaid 1,4 korda (diagramm 7). Kõige rohkem oli olmemugavusi linnade korterelamutes ning kõige vähem valdade pereelamutes. Valdade eluruumide vähesem tehnoarustatus oli tingitud hajaasustusest maal ja vanemate pereelamute suurest osatähtsusest. Seda, kui suurel osal haldusüksuste rahvastikust oli olmemugavusi (veevärk, keskküte ja elekterküte), kajastab teemakaart 4 ja 5. Pereelamutes oli olmemugavusi oluliselt vähem kui korterelamutes. Näiteks oli pereelamute elanike hulgas suhteliselt 2,5 korda vähem keskküttega või elekterküttega, 1,8 korda

vähem sooja veega ning 1,5–1,6 korda vähem veevärgi ja kanalisatsiooniga eluruumides elavaid inimesi. Linnade, eriti Tallinna pereelamud olid olmemugavustega paremini varustatud, sest linna oli tehnovõrke rohkem rajatud ja ka pereelamute elamufond uuem.

Täheldatav on seos rahvastiku tööalase ja sotsiaalmajandusliku staatuse ning elamistingimuste vahel (tabel G). Et loendusel sissetulekut ei küsitud, otsesid järeldusi sissetuleku ja elamistingimuste seoste kohta teha ei saa. Eelkõige kehtib see palgatöötajate kohta, kes on sissetulekult väga heterogeenne rühm. Küll aga eristusid elamistingimuste seisukohalt selgelt mõned väiksemad töötajaterühmad (ettevõtjad-tööandjad, üksik-ettevõtjad-vabakutselised), töötud ning osa mitteaktiivseid (pensionärid, lapsed jt).

Tabel G. **Elamistingimused elanike tööalase ja sotsiaal-majandusliku staatuse järgi, 2000**  
(protsent tavaeluruumis elavast rahvastikust)

Tööalane ja sotsiaal- majanduslik staatus	Elab pere- elamus	Elab pärast 1990. aastat ehitatud elamus <sup>1</sup>	Leibkond üürib eluruumi <sup>2</sup>	Eluruumis on				Keskmiselt pinda elaniku kohta, m <sup>2</sup>

Majanduslikult mitteaktiivne	26,0	3,8	19,1	83,6	73,4	68,0	65,5	21,7
alla 15-aastane laps (üli)õpilane <sup>4</sup>	33,9	5,3	14,6	84,3	72,5	69,2	65,1	23,9
pensionär	29,9	7,8	16,5	89,9	79,4	76,3	71,5	17,4
muu mittetöötav	27,1	7,7	13,7	91,7	82,9	80,3	78,0	20,1
	39,1	2,3	11,9	78,0	64,1	60,6	56,6	31,6
	36,3	5,6	19,9	79,8	67,7	63,7	59,7	21,3

Pereelamus elas keskmisest märgatavalt rohkem ettevõtjaid-tööandjaid, üksikettevõtjaid ning pensionäre nii Eestis tervikuna kui ka linnades ja valdades eraldi. See on ka põhjusi, miks nimetatud elanikegrupid elasid kõige avaramates oludes — ettevõtjatel-tööandjatel ja pensionäridel oli elaniku kohta pinda 31,6 ruutmeetrit, üksikettevõtjatel mõnevõrra vähem. Kõige kitsamates tingimustes elasid alla 15-aastased lapsed (diagramm 9). Lastega pered elasid oluliselt kitsamates tingimustes kui lasteta pered ja üksikud. Keskmisest vähem oli pinda elaniku kohta ka muudel mitteaktiivsetel (v.a pensionärid) ning töötutel. Pensionärid elasid küll avarates tingimustes, kuid nende elamud olid keskmisest vanemad ning väheste olmemugavustega. Näiteks valdade pensionäridest elas pool (49,7%) enne 1946. aastat ehitatud majas. Ka üksikettevõtjate hulgas (sh talupidajad) oli vanemas majas elavate inimeste osatähtsus üsna suur. Uutes, 1990-ndatel aastatel ehitatud elamutes elas suhteliselt kõige enam ettevõtjaid-tööandjaid. Oma elamistingimuste parandamine on kõige jõukohasem just sellele

elanikegrupile. Olmemugavusi oli samuti kõige enam ettevõtjate-tööandjate eluruumides. Eriti suured erinevused erineva tööalase ja sotsiaal-majandusliku staatusega inimeste olmemugavustes ilmsid valdades. Näiteks keskküte või elekterküttega eluruumides elas valdades 78% ettevõtjatest-tööandjatest, 55% palgatöötajatest ja 21% pensionäridest (diagramm 10).

Tabel H. **Tavaeluruumide rahvastik eluruumi tüübi ja rahvuse järgi, 2000**

Eluruumi tüüp	Kokku	Eestlased	Mitte- eestlased
Kokku	100,0	100,0	100,0
Pereelamu	27,4	37,4	6,3
Osa pereelamust	2,8	3,8	0,8
Korter	69,3	58,6	92,1
Omaette tuba (toad)	0,5	0,2	0,8

<sup>1</sup> Siin ja edaspidi on ehitusaja protsendid esitatud nende isikute suhtes, kelle hoone ehitusaeg on teada.

<sup>2</sup> Üürnike protsendid on esitatud teadaoleva eluruumi kasutamise alusega isikute suhtes.

<sup>3</sup> Kokku-real on arvestatud ka neid inimesi, kelle majanduslik aktiivsus on teadmata.

<sup>4</sup> Vähemalt 15-aastane.

Üsna suured erinevused olid eestlaste ja mitte-eestlaste elamistingimustes. Tavaeluruumis elavatest eestlastest elas pereelamus (sh pereelamu osas) 41,2%, mitte-eestlastest aga vaid 7,1% (tabel H, diagramm 2). Valdav osa mitte-eestlastest elas korteris, eelkõige linnade suurelamus. Rohkem kui kaks kolmandikku (67,5%) korterelamus elavatest mitte-eestlastest elas vähemalt 50 korteriga majas. Eestlastel oli sama näitaja 38,1%. Mitteeestlaste hulgas oli suurem ka ühiselamu tüüpi majade isoleeritud tubades elavate inimeste osatähtsus. Muud tüüpi eluruumis (majutusruum, institutsiooni ruum jm) elavate eestlaste ja mitte-eestlaste osatähtsus oluliselt ei erinenud (umbes 2%).

Tingituna eelkõige pereelamus elava rahvastiku suuremast osatähtsusest eestlaste hulgas elasid eestlased keskmiselt avaramates oludes kui mitte-eestlased — keskmine pind elaniku kohta oli eestlastel 25,3 ja mitte-eestlastel 21,0 ruutmeetrit. Ka oli eestlaste eluruumides privaatsust rohkem — sellistes eluruumides elavaid inimesi, kus tubade arv oli elanike arvust suurem või sellega võrdne, oli eestlaste seas 58,8%, mitte-eestlaste seas 49,4%. Samas elasid eestlased vanemates ning vähemate olmemugavustega eluruumides. Enne 1946. aastat ehitatud hoones elas 26% eestlastest ja 6% mitte-eestlastest (diagramm 4). Aastatel 1946–1990 ehitatud hoones elas 68% eestlastest ja 90% mitte-eestlastest. Uutes, 1990-ndatel aastatel ehitatud eluruumides oli eestlaste osatähtsus veidi suurem: neis elas eestlastest 6%, mitte-eestlastest 4%. Et valdav enamik mitte-eestlastest elas kõigi mugavustega linnakorteris, olid nad peaaegu kõigi olmemugavuste liikidega paremini varustatud (diagramm 8). Vaid elekterkütte ja saunaga eluruumid olid eestlastel rohkem.

## Leibkondade elamistingimused

Loenduse andmetel oli Eestis eluruumid rohkem kui leibkondi — loendati 617 399 tavaeluruumi ja 582 089 leibkonda<sup>1</sup>. Osa leibkondadest elas eluruumis, mis ei olnud alaliseks elamiseks kavandatud, eelkõige majutusruumis. Leibkonnad jagunesid selle järgi, mis tüüpi eluruumis nad elasid, nii:

- tavaeluruum — 565 441 leibkonda (97,2%);
- majutusruum — 11 866 leibkonda (2,0%);
- elamiseks kasutatav mitteeluruum — 1069 leibkonda (0,2%).

Eluruumi tüüp jäi teadmata 3713 leibkonnal (0,6%). Majutusruumide leibkondadest olid 92% ühe liikmega ja 5% kahe liikmega.

Tavaeluruumis elavate leibkondade elamistingimuste põhinäitajad olid järgmised:

- 71,3% leibkondadest elas korteris või omaette toas. Linnades oli kortermajas elavate leibkondade osatähtsus üle kahe korra suurem kui valdades, vastavalt 84,9% ja 41,1%.
- Ligi kaks kolmandikku (65%) leibkondadest elas aastatel 1961–1990 ehitatud hoones. 1990-ndatel aastatel ehitatud hoones elas 5% leibkondadest<sup>2</sup>.
- 77% leibkondadest elas nende enda omanduses olevas eluruumis, 3,8% kasutas eluruumi elamuühistu liikmena<sup>3</sup>.
- 35,5% leibkondadest elas 2 toaga ja 31,6% 3 toaga eluruumis.
- Olmemugavusi oli järgmiselt (protsent leibkondadest):  
veevärk — 85,6%;  
veeklosett — 74,9%;  
vann (dušš) — 70,9%;  
soe vesi — 67,5%;  
keskküte — 62,3%.

Pereelamus elavate leibkondade osatähtsust maakondades kajastab teemakaart 7. Leibkondade jaotust nende eluruumi hoone ehitusaja järgi näitab diagramm 11.

Tabel I. Asustatud tavaeluruumid ja leibkonnad eluruumis elavate leibkondade arvu järgi, 2000

Eluruum	Eluruu- mide arv	%	Leibkon- dade arv	%
Kõik eluruumid	537 907	100	565 441	100
Ühe leibkonnaga eluruum	513 260	95,4	513 260	90,8
Kahe leibkonnaga eluruum	22 025	4,1	44 050	7,8
Kolme või enama leibkonnaga eluruum	2 622	0,5	8 131	1,4

<sup>1</sup> Siin ja edaspidi mõistetakse leibkonnana vaid tavaleibkondi. Institutsioonileibkonnad ja kodutud jäävad vaatluse alt välja.

<sup>2</sup> Siin ja edaspidi on ehitusaja protsent esitatud nende leibkondade suhtes, kelle hoone ehitusaeg on teada.

<sup>3</sup> Siin ja edaspidi on eluruumi kasutamise aluse protsent esitatud nende leibkondade suhtes, kelle eluruumi kasutamise alus on teada.

Hoolimata sellest, et osa eluruumidest oli asustamata või leidis kasutamist vaid hooajaliselt, elas 4,6%-s asustatud eluruumides kaks või enam leibkonda (tabel I). Leibkondi, kes jagasid eluruumi ühe või mitme leibkonnaga, oli 9,2%. Suur osa neist olid ühe liikmega leibkonnad — kahe leibkonnaga eluruumides oli ühe liikmega leibkondi rohkem kui pool (52,6%), vähemalt kolme leibkonnaga eluruumides üle kahe kolmandiku (67,8%). Suuremad, vähemalt nelja liikmega leibkonnad jagasid eluruumi teise leibkonnaga harva (kõigist eluruumi jagavatest leibkondadest olid nelja ja enama liikmega 10,6%). Mitme liikmega leibkondade hulgas, kes eluruumi jagasid, oli nii lastega (lapsega) paare, lasteta paare kui ka

üksikvanema leibkondi. Enamasti kasutas vähemalt üks eluruumi jagavatest leibkondadest eluruumi üürnikuna või muu valdamisviisi alusel (s.t ei olnud eluruumi omanik ega elamuühistu liige). 72%-s mitme leibkonnaga eluruumides, kus vähemalt ühel leibkonnal oli eluruumi kasutamise alus teada, elas üürnikke või muul alusel eluruumi kasutajaid. Eluruumi jagavad leibkonnad elasid sagedamini pereelamus kui ülejäänud leibkonnad (vastavalt 49,6% ja 26,6%). Ka olid need eluruumid, kus elas mitu leibkonda, tubade arvult keskmiselt suuremad eluruumidest, mida asustas üks leibkond. Ühe leibkonnaga asustatud eluruumide osatähtsust maakondades kajastab teemakaart 6.

Tabel J. Elamistingimused leibkonna suuruse järgi, 2000  
(protsent tavaeluruumis elavatest leibkondadest)

Leibkonna suurus	Elab pere- elamus	Elab pärast 1960. aastat ehitatud elamus	Üürib eluruumi	Eluruumis on				Keskmiselt pinda elaniku kohta, m <sup>2</sup>
				veevärk	veeklosett	vann (dušš)	keskküte või elekterküte	
Leibkonnad kokku	28,7	69,2	16,8	85,6	74,9	70,9	67,9	24,0
1 liikmega	27,3	62,9	25,1	79,2	68,1	61,7	60,5	41,8
2 liikmega	29,3	69,3	14,3	85,7	74,6	70,9	67,5	27,8
3 liikmega	24,4	75,5	13,4	91,4	82,5	79,5	76,3	20,8
4 liikmega	29,1	75,7	11,3	92,2	82,7	80,4	76,2	17,6
5 liikmega	42,0	69,4	10,6	88,0	74,5	73,0	67,2	15,8
6 või enama liikmega	54,7	60,2	12,4	79,7	62,3	61,0	54,1	13,1

Suured leibkonnad elasid sagedamini pereelamus (tabel J, diagramm 12). See tendents ilmnis eriti valdades. Sellest hoolimata elasid suuremad leibkonnad oluliselt kitsamates tingimustes kui väikesed: mida suurem leibkond oli, seda vähem pinda leibkonnaliikme kohta tuli (diagramm 13). Järelikult ei elanud leibkonnad sageli oma vajadustele vastavas eluruumis. Kogumiku osas tabelites on leibkonna suuruse asemel vaadeldud eluruumi elanike arvu. Et valdavas enamikus eluruumides elas üks leibkond, siis oli elanike arv eluruumis enamasti võrdne leibkonna suurusega. Elanikke oli tavaeluruumis keskmiselt 2,48 ja tavaeluruumis elava leibkonna keskmine suurus oli 2,36 inimest. Diagrammilt 14 näeme, et suure tubade arvuga eluruumidest üle 20% olid asustatud vaid ühe või kahe elanikuga, samas olid paljud (36%) ühe toaga eluruumidest asustatud mitme elanikuga. Mida suurem oli eluruumi tubade arv, seda hõredamalt see eluruum keskmiselt asustatud oli (diagramm 15). Näiteks oli ühe toaga eluruumides elaniku kohta keskmiselt 0,66 tuba, 10 ja enama toaga eluruumides aga 2,7. Nimetatud disproportsioon eluruumide suuruse ja neis elavate elanike arvu vahel esineb nii pereelamute kui ka korterelamute puhul.

Mitmete elamistingimuste näitajate puhul võib täheldada, et kõige väikemate ja kõige suuremate leibkondade elamistingimused olid keskmisest halvemad, keskmise suurusega leibkondadel aga keskmisest paremad. Selle üks põhjus on ilmselt töötajate ja ülalpeetavate ning töötajate ja pensionäride erinev osa erineva suurusega leibkondades. 3–4 liikmega leibkondades oli sageli kaks töötajat, 1–2 liikmega leibkondadest oli suur osa pensionärileibkondi. Suured leibkonnad olid tihti lasterikkad ning neid elas enam maal, kus elamufond on vanem ja olmemugavusi on vähem.

Kolmveerand 3–4 liikmega leibkondadest elas pärast 1960. aastat ehitatud hoones, väiksemad ja suuremad leibkonnad elasid sagedamini vanemas majas (tabel J). Ka olmemugavusi oli kõige enam 3–4 liikmega leibkondadel (diagramm 16), sest enamik neist elas uuemas kõigi mugavustega linnakorteris (diagramm 12). Ühe ja kahe liikmega leibkondi elas enam vanemas linnakorteris. Suured leibkonnad elasid sagedamini valdades, kus olmemugavusi oli vähem. Eriti vähe oli olmemugavusi valdade pereelamutes, kus elas märkimisväärne osa suurtest leibkondadest. Näiteks kuue ja enama liikmega leibkondadest elas valla pereelamus 40%.

Üürnikke oli enam ühe liikmega leibkondade hulgas (25%), neist suur osa olid pensionärid (40%) ja töötajad (37%). Üürnike osatähtsus oli üsna suur ka kõige suuremate leibkondade seas, kes elasid keskmisest sagedamini riigile, kohalikule

omavalitsusele või mõnele muule omanikule (v.a eraisik või elamuühistu) kuuluvas eluruumis. Ka ühe liikmega leibkonnad elasid nimetatud eluruumides keskmisest sagedamini.

Tabel K. **Elamistingimused leibkonna koosseisu järgi, 2000**  
(protsent tavaeluruumis elavatest leibkondadest)

Leibkonna koosseis <sup>1</sup>	Elab pere-elamus	Elab pärast 1960. aastat ehitatud elamus	Üürib eluruumi	Eluruumis on				Keskmiselt pinda elaniku kohta, m <sup>2</sup>
				veevärk	vee-klosett	vann (dušš)	keskküte või elekterküte	
Leibkonnad kokku	28,7	69,2	16,8	85,6	74,9	70,9	67,9	24,0
Mittepereleibkond	27,7	63,0	24,5	79,4	68,2	61,9	60,5	39,0
ühe liikmega	27,3	62,9	25,1	79,2	68,1	61,7	60,5	41,8
Ühepereleibkond	29,0	72,5	13,1	89,0	78,7	75,7	71,9	21,1
lasteta paar	34,6	68,5	12,5	85,1	72,6	69,8	65,8	28,0
lasteta abielupaar	36,2	69,7	8,4	86,0	73,2	71,2	67,1	28,9
lasteta vabaabielupaar	29,0	64,2	27,1	81,9	70,3	65,0	61,4	25,0
lastega paar	29,6	75,2	12,0	91,5	81,9	79,6	75,6	18,4
lastega abielupaar	29,8	76,6	9,2	92,8	83,6	81,8	78,3	18,8
lastega vabaabielupaar	28,9	69,7	23,0	86,7	75,4	71,2	65,2	16,9
lastega üksikvanem	20,6	72,5	15,9	88,8	80,1	75,5	72,3	21,8
Mitmepereleibkond	38,6	72,8	6,4	89,2	75,7	74,9	71,6	14,8

Leibkonna koosseisu seost elamistingimustega illustreerivad tabel K ning diagramm 17 ja 18. Linnas elavaid leibkondi oli lastega ja lasteta paaride seas peaaegu võrdselt, ligi 68%. Lastega paarid elasid võrreldes lasteta paaridega kitsamates oludes, neil oli leibkonnaliikme kohta pinda peaaegu 10 ruutmeetrit vähem. Lastega paaridel oli see näitarv 18,4 ja lasteta paaridel 28 ruutmeetrit. Samas elasid lastega paarid uuemates majades, kus oli olmemugavusi rohkem. Lasteta paarid (neist suur osa vanemad inimesed, kelle lapsed elasid vanematest lahus) elasid sagedamini pereelamus.

Abielu- ja vabaabielupaaride elamistingimustes oli erinevusi. Vabaabielupaaride seas oli üürnikke oluliselt rohkem. Näiteks lasteta vabaabielupaaridest oli üürnikke 27,1%, lasteta abielupaaridest 8,4% (erinevus 3,2-kordne). Lastega paaride seas oli nimetatud erinevus 2,5-kordne. Vabaabielupaare elas suhteliselt enam valdades. Lastega vabaabielupaaridest elas vallas 42%, lastega abielupaaridest 30%. Lasteta paaride puhul oli sama erinevus oluliselt väiksem. Tingituna elukoha (linn-vald) erinevusest elasid vabaabielupaarid võrreldes abielupaaridega vanemas majas ning nende eluruumis oli vähem olmemugavusi. Et vabaabielupaarid elasid sagedamini korteris ja vähem pereelamus ning nende eluruumides oli tube vähem, oli neil

leibkonnaliikme kohta keskmiselt vähem pinda kui abielupaaridel. Suhteliselt palju oli vabaabielupaaride seas valdades asuvates korterites elavaid leibkondi.

Üksikvanemate leibkondi elas suhteliselt kõige enam linnakorteris (66%). Seetõttu elasid üksikvanemate leibkonnad uuemates majades, kus olmemugavusi oli keskmisest rohkem, kuid siiski vähem kui lastega paaridel. Eluruumi pinda leibkonnaliikme kohta oli neil rohkem kui lastega paaridel. Pereelamus elavate leibkondade osatähtsus on neil kõige väiksem, seda nii linnas kui ka vallas.

Et tavaeluruumis elavatest mitmepereleibkondadest oli 91% ühe liikmega, siis olid nende elamistingimused sarnased ühe liikmega leibkondade elamistingimustega.

Mitmepereleibkondi elas muude leibkondadega võrreldes rohkem pereelamus. Nende seas oli kõige vähem üürnikke ja neil oli leibkonnaliikme kohta kõige vähem pinda (14,8 ruutmeetrit). Nimetatud leibkonnad elasid keskmisest uuemates majades ning ka olmemugavusi oli neil keskmisest rohkem. Linnas elavate leibkondade osatähtsus oli neil üks suuremaid.

<sup>1</sup> Kui laste vanust ei ole täpsustatud, siis peetakse siin ja edaspidi silmas mis tahes vanuses lapsi, sh täisealisi.

Tabel L. **Elamistingimused leibkonna laste arvu järgi, 2000**  
(protsent tavaeluruumis elavatest leibkondadest)

Alla 18-aastasi lapsi leibkonnas	Elab pere-elamus	Elab pärast 1960. aastat ehitatud elamus	Üürib eluruumi	Eluruumis on				Keskmiselt pinda elaniku kohta, m <sup>2</sup>
				veevärk	vee-klosett	vann (dušš)	keskküte või elekterküte	
Leibkonnad kokku	28,7	69,2	16,8	85,6	74,9	70,9	67,9	24,0
Ilma lasteta	30,1	66,2	17,7	82,5	71,2	66,5	64,1	30,3
1 lapsega	20,6	77,2	15,6	93,1	85,2	81,8	79,1	19,7
2 lapsega	29,5	74,7	14,1	91,8	81,8	79,1	74,3	17,2
3 lapsega	43,0	67,2	15,7	85,7	71,4	69,2	62,4	15,4
4 lapsega	48,4	59,9	19,8	77,8	61,2	58,9	49,1	12,7
5 või enama lapsega	53,1	54,9	21,2	70,4	54,7	51,4	42,9	10,5

Lastega leibkondade puhul ilmneb seos laste arvu ja elamistingimuste vahel (tabel L). Suurema laste arvuga leibkonnad elasid sagedamini valdades. Näiteks nelja alla 18-aastase lapsega leibkondadest elas valdades 65% ning vähemalt viie lapsega leibkondadest 71%. Mida suurem oli laste arv leibkonnas, seda harvem elas leibkond linnakorteris: ühe alla 18-aastase lapsega leibkondadest elas linnakorteris 66%, vähemalt viie lapsega leibkondadest 20%. Suurema laste arvuga leibkonnad elasid sagedamini pereelamus (diagramm 19). See tendents ilmnis nii linnas kui

ka vallas elanud leibkondade puhul. Näiteks elas linnades ühe alla 18-aastase lapsega leibkondadest pereelamus 12%, nelja lapsega leibkondadest 28%. Lasterikaste leibkondade eluruumid olid vanemad ja neis oli vähem olmemugavusi (diagramm 20). Üürnikke oli lasterikaste leibkondade hulgas keskmisest enam. Mida rohkem oli leibkonnas lapsi, seda vähem oli leibkonnal keskmiselt pinda leibkonnaliikme kohta (tabel L). Valdades elasid lastega leibkonnad veidi avaramates tingimustes kui linnas.

Tabel M. **Elamistingimused leibkonnaliikmete majandusliku aktiivsuse järgi, 2000**  
(protsent tavaeluruumis elavatest leibkondadest)

Leibkonnaliikmete majanduslik aktiivsus	Elab pere-elamus	Elab pärast 1960. aastat ehitatud elamus	Üürib eluruumi	Eluruumis on				Keskmiselt pinda elaniku kohta, m <sup>2</sup>
				veevärk	veeklosett	vann (dušš)	keskküte või elekterküte	
Leibkonnad kokku	28,7	69,2	16,8	85,6	74,9	70,9	67,9	24,0
Töötavate liikmetega	25,4	74,8	14,9	91,6	82,0	78,7	75,4	22,0
1 töötava liikmega	23,5	72,7	18,5	89,4	79,6	75,1	71,9	23,7
2 töötava liikmega	27,2	77,4	10,9	94,3	85,3	83,3	79,7	20,8
3 või enama töötava liikmega	31,2	78,2	5,9	94,9	84,9	84,2	81,4	18,5
Töötute liikmetega	25,8	69,3	19,0	83,9	73,8	68,5	65,9	19,1
töötavate liikmeteta	27,7	62,8	25,6	76,8	65,9	59,1	57,9	21,4
Ainult mitteaktiivsete liikmetega	36,5	58,4	19,1	74,5	61,4	56,4	53,7	32,5
vähemalt ühe pensionäri	38,1	57,8	16,1	74,5	60,9	56,2	52,8	33,9

Leibkondade elamistingimused olid mõnevõrra erinevad sõltuvalt sellest, milline oli leibkonnaliikmete majanduslik aktiivsus. Töötavate liikmetega leibkonnad elasid keskmisest enam linnas. Pereelamus elas neist seda suurem osa, mida rohkem töötajaid leibkonnas oli (tabel M). Suurema töötajate arvuga leibkondades oli rohkem omanikke

või elamuühistu liikmeid ja vähem üürnikke. Olmemugavusi oli ühe töötajaga leibkondades, kellest ligi kolmandik oli ühe liikmega, keskmiselt vähem kui mitme töötajaga leibkondades. Sellest, kas leibkonnas oli kaks, kolm või enam töötajat, leibkonna eluruumi olmemugavused oluliselt ei sõltunud. Eluruumi pinda oli leibkonnaliikme kohta

suurema töötajate arvuga leibkonnas keskmiselt siiski vähem kui ühe töötajaga leibkonnas ning palju vähem kui ainult mitteaktiivsete liikmetega leibkondades.

Ainult mitteaktiivsete liikmetega leibkonnad, kellest suurem osa olid pensionäri Leibkonnad, elasid keskmisest enam pereelamus. Nende seas oli valdade leibkondade osatähtsus kõige suurem

(37%). Valdade pereelamus elas neist iga neljas leibkond. Töötute liikmetega leibkondi, kus töötajaid ei olnud, elas valdades peaaegu niisama palju kui eelnimetatud leibkondi (36%), kuid pereelamus elas neid vähem. Eriti vähe elas neid linnade pereelamus. Üürnikke oli nimetatud leibkondade seas kõige rohkem.

## LIVING CONDITIONS OF THE POPULATION AND HOUSEHOLDS

*The publication describes the living conditions of the population and households according to the 2000 Census data. The distribution of the population and households is observed by type of dwelling, time of construction of the building, owner of dwelling, tenure status, comfort characteristics of dwelling, etc. A connection of living conditions is considered with employment and socio-economic status of the population, ethnic nationality, size and composition of the household. The publication also presents the results of the 1989 Population Census on the living conditions<sup>1</sup>.*

### Living conditions of the population

Large majority of the population lives in conventional dwellings, i.e. in dwellings, which are designed for permanent habitation of one household. At the time of the 2000 Census, 2% of the population lived in dwellings of another type. The distribution of 1,370,052 enumerated persons by type of dwelling in which they lived was the following:

- conventional dwelling — 1,335,142 persons (97.5%);

- accommodation room — 13,331 persons (1.0%);
- non-dwelling used for habitation (non-conventional dwelling) — 1,926 persons (0.1%);
- room in institution — 12,625 persons (0.9%).

*The type of dwelling of 6,659 (0.5%) persons remained unknown, 369 (0.03%) homeless, i.e. persons without a dwelling, were enumerated in the Census. The majority of inhabitants of accommodation rooms were students (pupils) and employed persons (70.4% and 14.5% respectively). Of institutions, the largest number of inhabitants lived in welfare and penal institutions. Compared to the previous 1989 Census, there was a sharp decline in the number of persons living in accommodation rooms: in 1989 80,242 persons were enumerated in hostels. The decrease in their number between the censuses was remarkable even irrespective of the fact that in 1989 social welfare houses for elderly and disabled persons were also regarded as hostels but in 2000 they were regarded as institutions.*

Table A. Population living in conventional dwellings by type of dwelling, 2000

Type of dwelling	Population living in conventional dwellings			
	total	cities	of which Tallinn	rural municipalities
<b>Number</b>				
Total	1 335 142	903 567	392 129	431 575
Family dwelling	366 246	126 047	32 507	240 199
Part of the family dwelling	37 584	23 852	8 870	13 732
Apartment	925 485	748 177	347 395	177 308
Separate living room(s)	5 827	5 491	3 357	336
<b>Percentages</b>				
Total	100.0	100.0	100.0	100.0
Family dwelling	27.4	14.0	8.3	55.6
Part of the family dwelling	2.8	2.6	2.3	3.2
Apartment	69.3	82.8	88.6	41.1
Separate living room(s)	0.5	0.6	0.8	0.1

<sup>1</sup> Results of the last two censuses are not completely comparable, as the type of dwelling was defined differently (see Definitions). The contingent of inhabitants who were asked all the data concerning their living conditions was also slightly different — in 2000 only the inhabitants of conventional dwellings were included, in 1989 in addition to them also the inhabitants of hostels.

Hereinafter the living conditions of the population living in conventional dwellings are observed, therefore both 'population' and 'inhabitants' denote persons living in conventional dwellings.

Living conditions largely depend on the type of dwelling. 69.8% of the population lived in apartments or separate living rooms in hostel-type houses<sup>1</sup> (Table A, Diagram 1). 30.2% of the population lived in family dwellings or parts of the family dwelling.

The proportion of the population living in apartments was twice larger in cities than in rural municipalities. Family dwelling was the prevailing type of dwelling in rural municipalities. Thematic map 1 shows the proportions of the population living in family dwellings by administrative units.

Buildings including a large number of apartments prevail among apartment buildings. Only 13.2% of the population living in apartment buildings lived in buildings containing fewer than 10 apartments, while 35.0% of the population lived in buildings containing fewer than 30 apartments. The proportion of the population living in apartment buildings with a smaller number of dwellings was considerably larger in rural municipalities — 82.6% of such population lived in residential buildings containing fewer than 30 apartments. Consequently, the average number of inhabitants

living in apartment buildings was 2.3 times smaller in rural municipalities than in cities (Table B).

**Table B. Average number of inhabitants living in buildings containing conventional dwellings by type of building, 2000**

Type of building	Total	Cities	of which Tallinn	Rural municipalities
Total	8.3	14.7	22.9	4.3
Apartment building	43.2	53.7	66.1	23.4
One-family house	2.8	3.0	3.4	2.7
Other small residential building	5.3	5.4	5.5	5.2
Non-residential building	3.2	3.6	3.8	2.9
Unknown	4.7	4.7	5.2	4.8

On an average, slightly more inhabitants lived in one-family houses in cities than in the same type of buildings in rural municipalities. Relatively more people living alone and fewer households consisting of 3–4 members lived in one-family houses in rural municipalities than in the same type of building in cities.

**Table C. Population living in conventional dwellings by type and time of construction of building, 2000**  
(% of population the construction time of whose building is known)

Time of construction of building	All types of buildings			Apartment building			One-family house and other small residential building		
	total	cities	rural municipalities	total	cities	rural municipalities	total	cities	rural municipalities
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Before 1946	19.1	12.1	33.9	8.2	8.9	5.2	42.3	25.1	52.4
1946–1960	9.9	10.6	8.3	7.5	7.9	5.8	15.1	24.2	9.8
1961–1970	19.1	22.0	12.9	22.1	22.7	19.7	12.4	19.5	8.3
1971–1980	22.9	25.6	17.3	28.8	28.5	30.3	10.3	12.5	9.0
1981–1990	23.3	24.6	20.5	29.6	28.2	35.6	9.7	7.5	10.9
1991 or later	4.8	4.5	5.5	3.7	3.7	3.4	7.5	8.6	7.0
Uncompleted building	0.9	0.6	1.6	0.1	0.1	0.0	2.7	2.6	2.6

The largest proportion (65%) of the population living in conventional dwellings lived in buildings completed in 1961–1990 (Table C, Diagram 3). Characteristic of this period was a very great intensity of construction activities. There was a need to restore the housing destroyed in the Second World War and to build new housing into cities

with a greater concentration of economic activities. The rapid growth in the housing construction was largely connected with the most active immigration of this period. 29% of the population lived in buildings completed before 1961 and 6% lived in buildings completed after the 1990s.

<sup>1</sup> Rooms, which were not used as an accommodation room. In current statistics, this type of dwelling is considered an apartment and sometimes, including in this overview, they are also classified as an apartment.

As after the Second World War, the construction activity increasingly concentrated into cities and mostly apartment buildings were built, residential buildings are, on an average, newer in cities than in rural municipalities, and the apartment buildings are, on an average, newer than small residential buildings. For example, 77% of the population of cities and 58% of the population of rural municipalities lived in buildings completed after 1960. Of the population living in apartment buildings, the majority (84%) and of the population living in small residential buildings, two times less persons lived in buildings completed after 1960 (43%). There are more newer small residential buildings in cities than in rural municipalities.

As a result of the privatisation and restitution of dwellings to their former owners in the 1990s, by the beginning of 2000 the majority of the population lived in private dwellings.

The inhabitants can be distributed by the ownership of the dwelling as follows:

- public sector (state and local government) — 3.3%;
- private sector — 95.2%;  
of which private person — 90.1%;  
dwelling association — 4.1%;  
other owner — 1.0%.

1.5% of the population lived in dwellings, the data on the owner of which were not received in the census. In 1989 nearly 75% of the population living in dwellings the type of which was recorded in the census<sup>1</sup> lived in buildings owned by the state, co-operative (excl. dwelling cooperatives) and public organisations. This housing was provided to the inhabitants free of charge and the rent was subsidised. Transition of the housing owned mainly by the state into private ownership and the formation of the market-based housing was the most remarkable change relating to living conditions of the population between the 1989 and 2000 censuses. The actual living conditions (comfort characteristics, type of dwelling, etc.) of people remained more or less unchanged between the censuses, however, the housing expenses grew rapidly.

Although in 2000 the largest proportion of the population lived in private dwellings, many dwellings were occupied not by the owner but by tenants or were used under some other form of tenure.

<sup>1</sup> Including persons living in hostels.

**Table D. Population living in conventional dwellings by tenure status, 2000**

(% of population the tenure status of whose dwelling is known)

Tenure status	Population living in conventional dwellings		
	total	cities	rural municipalities
Total	100.0	100.0	100.0
Owner	79.9	78.1	83.5
Member of dwelling association	3.8	5.6	0.3
Tenant	14.3	14.6	13.7
Other	2.0	1.7	2.5

83.7% of the population used the dwelling as an owner or member of the dwelling association (Table D). The proportion of dwelling owners or members of the dwelling association (i.e. one of the household members was the owner of the dwelling or a member of the dwelling association) in the population was the same in cities and rural municipalities. However, in rural municipalities, where very few dwelling associations had been formed, the proportion of persons living in dwellings owned by them was larger than in cities. Thematic map 2 reflects the proportion of population living in dwellings owned by household member by administrative units. 14.3% of inhabitants used the dwelling as a tenant, the respective proportion being slightly larger in cities as compared to rural municipalities. The proportion of tenants was considerably larger than average among the population aged 20–29 years (24.1%).

An important indicator of the quality of living conditions is the privacy. Only slightly over a quarter (26.4%) of the population living in conventional dwellings lived in dwellings where the number of rooms exceeded the number of inhabitants (Table E). There were relatively more such persons in rural municipalities than in cities, and in family dwellings compared to apartment buildings. The proportion of persons living in spacious conditions was the largest among persons living in family dwellings in cities (49.3%). Almost 30% of the population lived in dwellings where the number of rooms equalled the number of inhabitants. 43.9% of the population lived in overcrowded dwellings where there were more inhabitants than rooms. Almost half (48.9%) of the population living in apartments lived in overcrowded conditions. Thematic map 3 illustrates differences in the housing density of the population by administrative units and Diagram 5 reflects these differences by Tallinn city districts.

**Table E. Indicators of the housing density of the population living in conventional dwellings by type of dwelling<sup>1</sup>, 2000**

	Population living in conventional dwellings			Population living in family dwellings			Population living in apartments		
	total	cities	rural municipalities	total	cities	rural municipalities	total	cities	rural municipalities
Total population, percentages	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
more rooms than inhabitants	26.4	22.6	34.3	46.0	49.3	44.1	17.9	17.3	20.4
as many rooms as inhabitants	29.5	32.2	24.0	21.4	22.5	20.7	33.0	34.1	28.6
fewer rooms than inhabitants	43.9	45.0	41.5	32.3	27.9	34.9	48.9	48.4	50.9
number of rooms unknown	0.2	0.2	0.2	0.3	0.3	0.3	0.2	0.2	0.1
Average number of rooms per inhabitant	1.06	1.01	1.17	1.31	1.34	1.30	0.95	0.95	0.97
Average floor area <sup>2</sup> per inhabitant, m <sup>2</sup>	24.0	22.4	27.2	30.9	30.0	31.4	21.0	20.9	21.2

By census data, the average number of rooms and the average floor area per inhabitant in Estonia was 1.06 rooms and 24.0 square metres (Table E). In the case of apartments, these indicators were much smaller than in the case of family dwellings. As the proportion of apartments in cities was large, on an average, also the number of rooms and the floor area per inhabitant was smaller in cities. The respective data for Tallinn was 0.97 rooms and 21.8 square metres. Diagram 6 presents the distribution of the population living in conventional dwellings by floor area per inhabitant. The living conditions were the worst for 3.2% of the population for whom the floor area per inhabitant was below 9 square metres. About the same

proportion (3.1%) of the population lived in dwellings in which the floor area per inhabitant was over 60 square metres. In dwellings of almost half of the population, the floor area per inhabitant ranged between 9 and 20 square metres. The proportion of persons living in dwellings where the floor area per inhabitant was very small was relatively larger among the population living in the apartments in rural municipalities. The proportion of persons living in dwellings where the floor area per inhabitant was very large was relatively big among the population living in family dwellings in rural municipalities where the floor area per inhabitant was over 60 square metres for 8.6% of the population.

**Table F. Population living in conventional dwellings by comfort characteristics and type of dwelling, 2000 (percentages)**

Type of comfort characteristics	Population living in conventional dwellings			Population living in family dwellings			Population living in apartments		
	total	cities	rural municipalities	total	cities	rural municipalities	total	cities	rural municipalities
Water supply system	87.6	95.8	70.4	66.3	85.0	55.3	96.9	98.0	92.1
Flush toilet	76.9	88.6	52.4	39.4	55.2	30.1	93.1	95.2	84.3
Hot water	70.9	81.5	48.9	45.4	58.2	37.8	82.0	86.1	64.7
Bath (shower)	73.6	84.0	51.9	39.9	53.0	32.2	88.3	90.2	80.1
Sauna	19.5	10.1	39.0	61.0	55.4	64.3	1.5	1.1	3.0
Gas	39.4	42.4	33.2	33.5	28.1	36.6	42.0	45.2	28.4
Central heating	63.2	77.1	34.1	23.4	31.9	18.3	80.5	86.1	56.8
Electric heating	6.8	5.8	8.7	10.7	17.1	6.9	5.1	3.6	11.4

<sup>1</sup> If the types of dwelling 'part of the family dwelling' and 'separate room(s)' have not been brought out separately, then 'family dwelling' includes also parts of the family dwelling and 'apartment' includes separate room(s).

<sup>2</sup> Here and hereinafter the 'floor area' refers to the useful floor area or total area of the dwelling.

In cities, where the dwelling stock is newer and where dwellings locating in apartment buildings prevail, the dwellings were equipped with considerably more modern amenities than in rural municipalities. For example, in cities, there were relatively 1.9 times more inhabitants living in dwellings equipped with central or electric heating, 1.7 times more inhabitants living in dwellings equipped with running hot water and flush toilet, and 1.4 times more inhabitants living in dwellings equipped with water supply system and sewage disposal system (Diagram 7). The number of available modern comforts was the largest in apartment buildings in cities and the smallest in family dwellings in rural municipalities. The poorer equipment of dwellings with comfort characteristics was caused by the low density of habitation in rural areas as well as by the large proportion of older family dwellings. Thematic maps 4 and 5 show the proportions of population living in dwellings equipped with water supply system, central and electric heating by administrative units. There were considerably fewer modern comforts in family dwellings than in apartment buildings. For example, among the inhabitants of family dwellings

there were relatively 2.5 times less people living in dwellings equipped with central or electric heating, 1.8 times less people living in dwellings equipped with hot water and 1.5–1.6 times less people living in dwellings equipped with water supply system and sewage disposal system. The comfort characteristics of family dwellings locating in cities, and especially in Tallinn, are much better, as there are more utility networks in cities and also the dwelling stock of family dwellings is newer.

A connection can be noticed between the employment and socio-economic status of the population, and living conditions (Table G). As the census did not inquire after the income, it is not possible to draw direct conclusions concerning the relations between income and living conditions. This applies first of all to salaried employees who with respect to income form a very heterogeneous group. With regard to living conditions, some smaller groups of employees can be distinguished (entrepreneur-employers, self-employed persons-freelancers), unemployed persons and part of the inactive persons (pensioners, children, etc.).

**Table G. Living conditions by employment and socio-economic status of inhabitants, 2000**  
(percentage of population living in conventional dwellings)

Employment and socio-economic status	Lives in family dwelling	Lives in a residential building completed after 1990 <sup>1</sup>	Household member is tenant <sup>2</sup>	Dwelling is equipped with				Average floor area of dwelling per inhabitant, m <sup>2</sup>
				water supply system	flush toilet	bath (shower)	central or electric heating	
Total <sup>3</sup>	30.2	5.7	14.3	87.6	76.9	73.6	70.0	24.0
Economically active	26.3	6.2	14.0	91.3	81.7	78.6	75.4	24.0
employed person	26.4	6.6	13.2	92.5	83.1	80.3	76.9	24.4
salaried employee	24.9	6.2	13.4	92.7	83.5	80.5	77.2	24.0
entrepreneur-employer	41.9	16.6	9.5	96.8	89.3	88.9	89.9	31.6
self-employed person	48.1	8.0	12.5	86.2	70.0	69.2	62.3	27.9
other employee	49.0	6.2	9.5	81.4	64.3	63.0	55.7	24.1
unemployed person	26.0	3.8	19.1	83.6	73.4	68.0	65.5	21.7
Economically inactive	33.9	5.3	14.6	84.3	72.5	69.2	65.1	23.9
under 15-year-old child	29.9	7.8	16.5	89.9	79.4	76.3	71.5	17.4
student (pupil) <sup>4</sup>	27.1	7.7	13.7	91.7	82.9	80.3	78.0	20.1
pensioner	39.1	2.3	11.9	78.0	64.1	60.6	56.6	31.6
not working for other reasons	36.3	5.6	19.9	79.8	67.7	63.7	59.7	21.3

<sup>1</sup> Here and hereinafter the percentages of the time of construction have been presented with respect to persons the construction time of whose building is known.

<sup>2</sup> The percentages of tenants have been presented with respect to persons whose tenure status is known.

<sup>3</sup> The row 'Total' includes also persons whose economic activity is unknown.

<sup>4</sup> At least 15 years old.

The proportion of entrepreneur-employers, self-employed persons and pensioners living in family dwellings both in Estonia as a whole and separately in cities and rural municipalities was considerably larger than average. For this reason the floor area per inhabitant was also the largest in the case of the mentioned groups of population — 31.6 square metres for entrepreneur-employers and pensioners, and somewhat smaller for self-employed persons. The floor area per inhabitant was the smallest for under 15-year-old children (Diagram 9). In general, families with children had less space than families without children and persons living alone. The floor area per inhabitant was also smaller than average in the case of other inactive (excl. pensioners) and unemployed persons. Though dwellings of pensioners were more spacious, they were also older than average and equipped with fewer modern comforts. For example, half of pensioners living in rural municipalities (49.7%) lived in buildings completed before 1946. Among self-employed persons (incl. farmers), the proportion of persons living in older buildings was also fairly large. Entrepreneur-employers accounted for the largest proportion of persons living in buildings completed in the 1990s. This group of population also has the best resources to improve their living conditions. The dwellings of entrepreneur-employers were also best equipped with modern comforts. The differences between comfort characteristics of dwellings of persons with different employment and socio-economic status were especially significant in rural municipalities. For example, in rural municipalities, 78% of entrepreneur-employers lived in dwellings equipped with central or electric heating, the respective proportions for salaried employees and pensioners were 55% and 21% (Diagram 10).

**Table H. Population living in conventional dwellings by type of dwelling and ethnic nationality, 2000**

Type of dwelling	Total	Estonians	Non-Estonians
Total	100.0	100.0	100.0
Family dwelling	27.4	37.4	6.3
Part of the family dwelling	2.8	3.8	0.8
Apartment	69.3	58.6	92.1
Separate room(s)	0.5	0.2	0.8

There were fairly great differences between the living conditions of Estonians and non-Estonians. 41.2% of Estonians, but only 7.1% of non-Estonians, living in conventional dwellings lived in

family dwellings (incl. part of family dwelling) (Table H, Diagram 2). Large majority of non-Estonians lived in apartments, mostly in apartment buildings in cities. More than two thirds (67.5%) of non-Estonians living in apartment buildings lived in a building with at least 50 apartments. The same indicator for Estonians was 38.1%. The proportion of persons living in isolated rooms of hostel-type houses was also larger among non-Estonians. The respective proportions for Estonians and non-Estonians living in dwellings of other type (accommodation room, room in an institution, etc.) were almost the same (about 2%).

As the proportion of Estonians living in family dwellings was larger than that of non-Estonians, the living conditions of Estonians were, on an average, also more spacious — the average floor area per inhabitant was 25.3 square metres as compared to 21.0 square metres in the case of non-Estonians. Estonians also enjoyed more privacy — 58.8% of Estonians as against 49.4% of non-Estonians lived in dwellings where the number of rooms was larger than or equal with the number of inhabitants. At the same time, Estonians lived in older buildings with fewer modern comforts. 26% of Estonians and 6% of non-Estonians lived in buildings completed before 1946 (Diagram 4). 68% of Estonians and 90% of non-Estonians lived in buildings completed in the years 1946–1990. The proportion of Estonians living in new buildings, completed in the 1990s, was slightly larger than that of non-Estonians (6% and 4%, respectively). As a vast majority of non-Estonians lived in city apartments equipped with all modern amenities, their dwellings also had better comfort characteristics (Diagram 8). Estonians only had more dwellings equipped with electric heating and sauna.

### Living conditions of households

According to census data there were more dwellings than households in Estonia — the census enumerated 617,399 conventional dwellings and 582,089 households<sup>1</sup>. Part of households lived in dwellings not designed for permanent habitation, most often in accommodation rooms. Households can be distributed by the type of dwelling they occupied as follows:

- conventional dwelling — 565,441 households (97.2%);
- accommodation room — 11,866 households (2.0%);
- non-dwelling used for habitation — 1,069 households (0.2%).

<sup>1</sup> Here and hereinafter 'households' refer only to private households. Institutional households and the homeless are excluded.

The type of dwelling remained unknown in the case of 3,713 households (0.6%). 92% of households living in accommodation rooms consisted of one member and 5% were two-member households.

The main data on living conditions of households living in conventional dwellings were the following:

- 71.3% of households lived in an apartment or in a separate room. The proportion of households living in apartment buildings was over twice larger in cities as compared to rural municipalities, 84.9% and 41.1%, respectively.
- Almost two thirds of households (65%) lived in buildings completed in 1961–1990. 5% of households<sup>2</sup> lived in buildings completed in the 1990s.
- 77% of households lived in dwellings owned by them, 3.8% used the dwelling as a member of dwelling association<sup>3</sup>.
- 35.5% of households lived in dwellings with 2 rooms and 31.6% lived in dwellings with 3 rooms.
- Comfort characteristics divided as follows (percentage of households):  
water supply system — 85.6%;  
flush toilet — 74.9%;  
bath (shower) — 70.9%;  
hot water — 67.5%;  
central heating — 62.3%.

Thematic map 7 shows the proportions of households living in family dwellings in counties. Diagram 11 presents the distribution of households by the construction time of the building.

**Table I. Occupied conventional dwellings and households by number of households living in the dwelling, 2000**

Dwelling	Number of dwellings	%	Number of households	%
All dwellings	537 907	100	565 441	100
Dwellings occupied by a single household	513 260	95.4	513 260	90.8
Dwellings occupied by two households	22 025	4.1	44 050	7.8
Dwellings occupied by three or more households	2 622	0.5	8 131	1.4

<sup>1</sup> Here and hereinafter 'households' refer only to private households. Institutional households and the homeless are excluded.

<sup>2</sup> Here and hereinafter the percentage of the time of construction of the building is presented with respect to households, the construction time of whose building is known.

<sup>3</sup> Here and hereinafter the percentage of the tenure status is presented for households, whose tenure status is known.

Although part of dwellings were vacant or were used only seasonally, 4.6% of occupied dwellings accommodated two or more households (Table I). 9.2% of households shared their dwelling with one or more households. Large proportion of those were one-member households — of households living in dwellings occupied by two households, more than half were one-member households (52.6%) and in dwellings occupied by at least three households, one-member households accounted for over two thirds (67.8%) of households. Larger households, consisting of at least four members, rarely shared their dwelling with another household (of all households sharing their dwelling, 10.6% consisted of four or more members). Among households consisting of several members who shared their dwelling there were couples with child(ren), couples without children as well as lone-parent households. Usually at least one of the households sharing the dwelling lived in the dwelling as a tenant or had any other tenure status (i.e. was not the owner of the dwelling nor a member of dwelling association). 72% of dwellings, which were occupied by many households and in the case of which the tenure status was known for at least one household, accommodated tenants or persons who had any other tenure status. Households sharing a dwelling lived more often in family dwellings than other households (49.6% and 26.6%, respectively). Also dwellings, which accommodated many households, were by the average number of rooms larger than dwellings occupied by a single household. Thematic map 6 shows the proportion of dwellings occupied by a single household by counties.

**Table J. Living conditions by size of household, 2000**  
(percentage of households living in conventional dwellings)

Size of household	Lives in family dwelling	Lives in a residential building completed after 1960	Tenant	Dwelling is equipped with				Average floor area of dwelling per inhabitant, m <sup>2</sup>
				water supply system	flush toilet	bath (shower)	central or electric heating	
All households	28.7	69.2	16.8	85.6	74.9	70.9	67.9	24.0
with 1 member	27.3	62.9	25.1	79.2	68.1	61.7	60.5	41.8
with 2 members	29.3	69.3	14.3	85.7	74.6	70.9	67.5	27.8
with 3 members	24.4	75.5	13.4	91.4	82.5	79.5	76.3	20.8
with 4 members	29.1	75.7	11.3	92.2	82.7	80.4	76.2	17.6
with 5 members	42.0	69.4	10.6	88.0	74.5	73.0	67.2	15.8
with 6 or more members	54.7	60.2	12.4	79.7	62.3	61.0	54.1	13.1

Large households lived more often in a family dwelling (Table J, Diagram 12). This tendency is especially conspicuous for rural municipalities. Nevertheless, the floor area per household member was smaller the larger was the household (Diagram 13). Thus, households did not always live in dwellings, which met their needs. In some tables of the publication, instead of the size of household, the number of inhabitants of the dwelling is observed. The number of inhabitants of the dwelling usually coincided with the size of the household as the majority of dwellings were occupied by one household. The average number of inhabitants living in conventional dwelling was 2.48 and the average size of the household living in conventional dwelling was 2.36 persons. Diagram 14 shows that over 20% of dwellings with a large number of rooms were occupied by only one or two inhabitants, at the same time, many dwellings with one room (36%) were occupied by many inhabitants. The larger was the number of rooms in a dwelling, the lower was the average occupancy rate of that dwelling (Diagram 15). For example, the average number of rooms per inhabitant in dwellings with one room was 0.66 but 2.7 in dwellings with 10 and more rooms. This disproportion between the size of dwelling and number of persons living in these dwellings is characteristic of both family dwellings and apartment buildings.

With regard to different relevant indicators, the living conditions of the smallest and the largest households appeared to be worse than average, while the living conditions were better than average in the case of medium-sized households. One of the reasons could have been the different share of employed and dependent persons, and the employed

and pensioners in households of different sizes. Households consisting of 3–4 members often included two employed persons, while large proportion of households with 1–2 members were those of pensioner households. Large households often included many children and they mostly lived in rural areas where the living stock is older and the number of comfort characteristics is smaller.

Three quarters of households consisting of 3–4 members lived in buildings completed after 1960, smaller and larger households most often lived in an older building (Table J). More different modern comforts were available for 3–4-member households (Diagram 16), of whom the majority lived in city apartments equipped with all the modern amenities (Diagram 12). Households consisting of one or two members lived mostly in an older apartment in a city. Large households lived mainly in rural municipalities where dwellings were equipped with a smaller number of modern comforts — especially family dwellings, which accommodated a significant proportion of large households. For example, 40% of households with six or more members lived in a family dwelling in rural municipality.

There were more tenants among one-member households (25%), of whom a large proportion were pensioners (40%) and employed persons (37%). The proportion of tenants was fairly large also among the largest households, who, more often than usual, lived in a dwelling owned by the state, local government or any other owner (except private person or dwelling association). Also one-member households lived in the mentioned dwellings more often than usual.

**Table K Living conditions by composition of household, 2000**  
(percentage of households living in conventional dwellings)

Composition of household <sup>1</sup>	Lives in a family dwelling	Lives in a residential building completed after 1960	Tenant	Dwelling is equipped with				Average floor area of dwelling per inhabitant, m <sup>2</sup>
				water supply system	flush toilet	bath (shower)	central or electric heating	
All households	28.7	69.2	16.8	85.6	74.9	70.9	67.9	24.0
Non-family household with one member	27.7	63.0	24.5	79.4	68.2	61.9	60.5	39.0
One-family household	27.3	62.9	25.1	79.2	68.1	61.7	60.5	41.8
couple without children	29.0	72.5	13.1	89.0	78.7	75.7	71.9	21.1
married couple without children	34.6	68.5	12.5	85.1	72.6	69.8	65.8	28.0
cohabiting couple without children	36.2	69.7	8.4	86.0	73.2	71.2	67.1	28.9
couple with children	29.0	64.2	27.1	81.9	70.3	65.0	61.4	25.0
married couple with children	29.6	75.2	12.0	91.5	81.9	79.6	75.6	18.4
cohabiting couple with children	29.8	76.6	9.2	92.8	83.6	81.8	78.3	18.8
lone parent with children	28.9	69.7	23.0	86.7	75.4	71.2	65.2	16.9
Multifamily household	20.6	72.5	15.9	88.8	80.1	75.5	72.3	21.8
	38.6	72.8	6.4	89.2	75.7	74.9	71.6	14.8

Table K and Diagrams 17 and 18 reflect the relation between the composition of household and living conditions. About 68% of both couples with children and couples without children lived in cities. Couples with children lived in less spacious conditions than couples without children — the floor area per household member being almost 10 square metres smaller: 18.4 and 28 square metres, respectively. At the same time, couples with children lived in more recently completed buildings, which had more modern comforts. Couples without children (of whom a large proportion were older people whose children lived separately from their parents) lived more often in family dwellings.

There were differences in the living conditions of married and cohabiting couples. Among the latter, there were considerably more tenants. For example, of cohabiting couples without children, the proportion of tenants was 27.1% as compared to 8.4% in the case of married couples without children (representing a difference of slightly over 3.2 times). In the case of couples with children, there was a 2.5-fold relevant difference. The proportion of cohabiting couples who lived in rural municipalities was relatively larger. 42% of cohabiting couples with children and 30% of married couples with children lived in rural municipalities. In the case of couples without children, the same difference was considerably

smaller. Resulting from different living places (city – rural municipality), cohabiting couples lived in older buildings than married couples, and their dwellings were equipped with fewer modern comforts. Compared to married couples, the floor area per household member was smaller in the case of cohabiting couples, who lived more often in an apartment and less frequently in a family dwelling, their dwellings also had fewer rooms. The proportion of households living in apartments in rural municipality was fairly large among cohabiting couples.

Relatively large proportion of lone-parent households lived in apartments in a city (66%). Consequently, lone-parent households lived in more recently completed buildings, which had many modern comforts but still fewer than dwellings occupied by couples with children. The floor area per household member was larger in the case of lone-parent households as compared to couples with children. Among lone-parent households, the proportion of households living in family dwellings was the smallest, both in cities and rural municipalities.

The living conditions of one-member households resembled those of non-family households living in conventional dwellings, as 91% of the latter consisted of one member.

<sup>1</sup> In case the age of children has not been specified, then here and hereinafter 'children' refer to children of all ages, incl. adults.

Compared to other types of households, a fairly large share of multi-family households lived in family dwellings. The proportion of tenants among them and also the floor area per household member (14.8 square metres) was the smallest in the case of

these households. The mentioned households lived in more recently completed buildings and enjoyed more modern comforts than on average. Among multi-family households, the proportion of those living in cities was also one of the largest.

**Table L. Living conditions by number of children in household, 2000**  
(percentage of households living in conventional dwellings)

Under 18-year-old children in household	Lives in a family dwelling	Lives in a residential building completed after 1960	Tenant	Dwelling is equipped with				Average floor area of dwelling per inhabitant, m <sup>2</sup>
				water supply system	flush toilet	bath (shower)	central or electric heating	
All households	28.7	69.2	16.8	85.6	74.9	70.9	67.9	24.0
Without children	30.1	66.2	17.7	82.5	71.2	66.5	64.1	30.3
With 1 child	20.6	77.2	15.6	93.1	85.2	81.8	79.1	19.7
With 2 children	29.5	74.7	14.1	91.8	81.8	79.1	74.3	17.2
With 3 children	43.0	67.2	15.7	85.7	71.4	69.2	62.4	15.4
With 4 children	48.4	59.9	19.8	77.8	61.2	58.9	49.1	12.7
With 5 or more children	53.1	54.9	21.2	70.4	54.7	51.4	42.9	10.5

In the case of households with children, there appears an interrelation between the living conditions and number of children (Table L). Households with a larger number of children more often lived in rural municipalities. For example, 65% of households with four under 18-year-old children and 71% of households with at least five children lived in rural municipalities. The larger was the number of children in the household, the less frequently the household lived in an apartment in a city. For example, 66% of households with one under 18-year-old child as against 20% of households with at least five children lived in a city apartment. Households with a larger number of children lived more often in family dwellings

(Diagram 19). This tendency appeared in the case of both households living in cities and rural municipalities. For example, in cities, 12% of households with one under 18-year-old child and 28% of households with four children lived in family dwellings. Dwellings of households with a large number of children were older and equipped with fewer modern comforts (Diagram 20). The proportion of tenants was larger than average among households raising many children. The larger was the number of children in the household, the smaller was the average floor area per household member (Table L). Households with children in rural municipalities lived in more spacious conditions than those in cities.

**Table M. Living conditions by economic activity of household members, 2000**  
(percentage of households living in conventional dwellings)

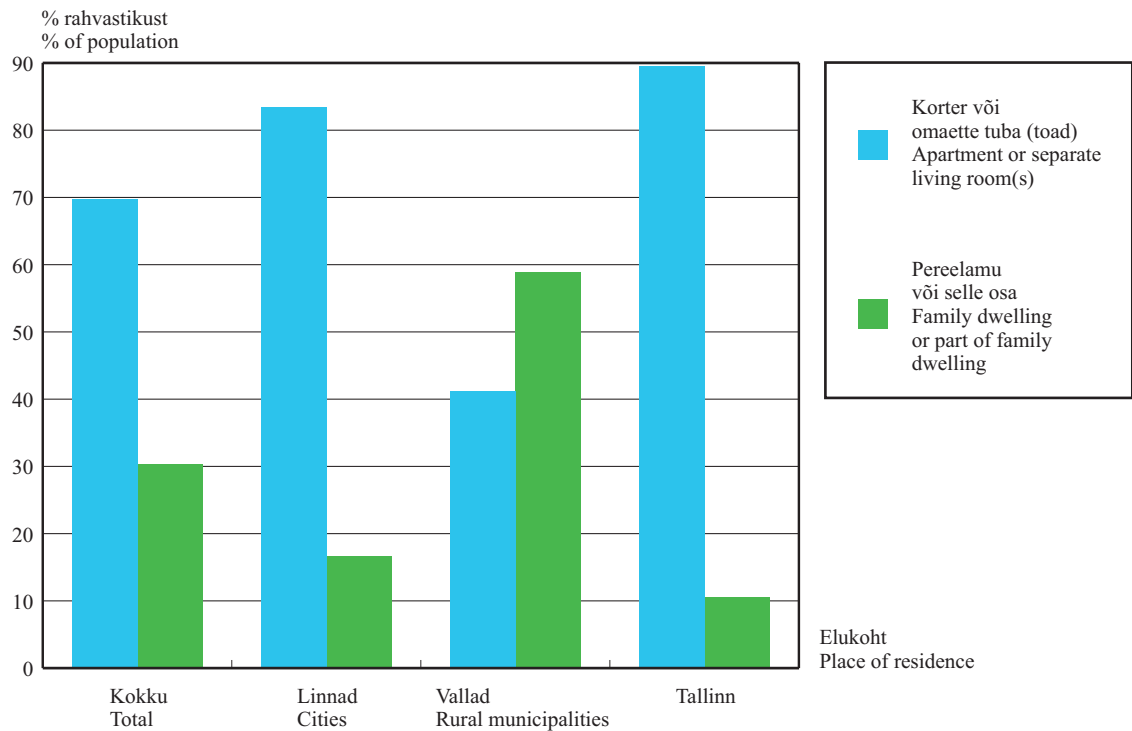

Economic activity of household members	Lives in a family dwelling	Lives in a residential building completed after 1960	Tenant	Dwelling is equipped with				Average floor area of dwelling per inhabitant, m <sup>2</sup>
				water supply system	flush toilet	bath (shower)	central or electric heating	
All households	28.7	69.2	16.8	85.6	74.9	70.9	67.9	24.0
With employed members	25.4	74.8	14.9	91.6	82.0	78.7	75.4	22.0
with 1 employed member	23.5	72.7	18.5	89.4	79.6	75.1	71.9	23.7
with 2 employed members	27.2	77.4	10.9	94.3	85.3	83.3	79.7	20.8
with 3 or more employed members	31.2	78.2	5.9	94.9	84.9	84.2	81.4	18.5
With unemployed members	25.8	69.3	19.0	83.9	73.8	68.5	65.9	19.1
without employed members	27.7	62.8	25.6	76.8	65.9	59.1	57.9	21.4
With only inactive members	36.5	58.4	19.1	74.5	61.4	56.4	53.7	32.5
with at least one pensioner	38.1	57.8	16.1	74.5	60.9	56.2	52.8	33.9

*Living conditions of households also depended somewhat on the economic activity of household members. The proportion of households with employed members was larger in cities. The proportion of these households living in family dwellings was the larger, the larger was the number of employed persons in the household (Table M). There were more dwelling owners or members of dwelling association and fewer tenants among households including a larger number of employed persons. On an average, fewer modern comforts were available for households with one employed person, of whom almost one third were one-member households, than for households with many employed persons. The availability of modern comforts did not depend significantly on whether the household included two, three or more employed persons. The average floor area per household member was smaller for households*

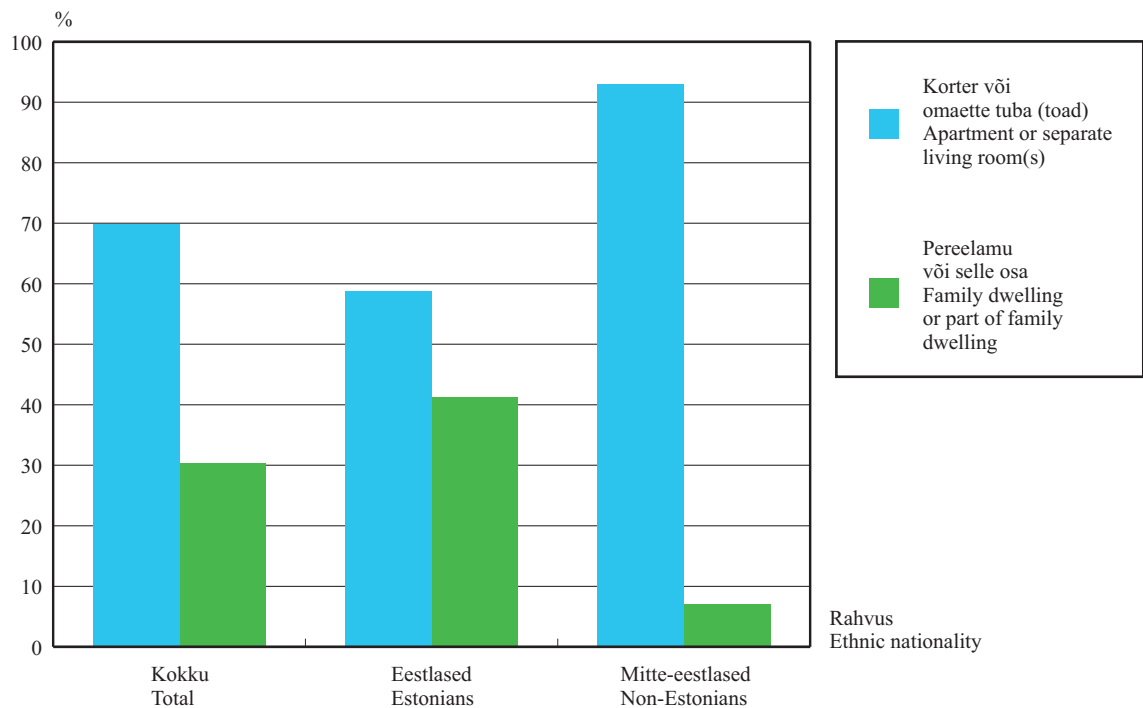

*including a larger number of employed persons than for households with one employed person, and much smaller than in households consisting of only inactive members.*

*Households consisting of only inactive members, of whom the largest proportion were pensioner households, lived more often than usual in family dwellings. Among them, the proportion of households living in rural municipalities was the largest (37%). Every fourth household of these lived in a family dwelling in rural municipality. The proportion of households with unemployed members and no employed members in rural municipalities was almost as large as that of previously mentioned households (36%), however, fewer of them lived in family dwellings and especially in family dwellings in cities. The proportion of tenants among them was the largest.*

Eesti haldusjaotuse kaart maakondade (15) nimede, piiride ja pindaladega ning linnade (42) nimedega. Kaardil on tähistamata vallasisesed linnad (Läänemaal — Lihula; Valgemaal — Otepää; Viljandimaal — Abja-Paluoja ja Karksi-Nuia; Võrumaal — Antsla).

Aluseks on I kogumiku Tabel 2. Haldusüksuste faktiline ja alaline rahvastik soo järgi, 1989, 2000.

**Eesti vallad, 2000** (tagakaane siseküljel)

Eesti haldusjaotuse kaart maakondade piiride ning valdade (205) nimede ja piiridega. Kaardil on tähistamata nende alev-valdade nimed, mis langevad kokku vallanimedega (Pärnumaal — Vändra alev-vald; Raplamaal — Kohila alev-vald ja Märjamaa alev-vald).

Aluseks on I kogumiku Tabel 2. Haldusüksuste faktiline ja alaline rahvastik soo järgi, 1989, 2000.

**Teemakaart 1. Pereelamus elava rahvastiku osatähtsus haldusüksustes, 2000**

Pereelamus elava rahvastiku osatähtsus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 30,2%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on X kogumiku Tabel 40. Asustatud eluruumid, leibkonnad ja elanikud eluruumi asukoha ja tüübi järgi, 2000.

**Teemakaart 2. Leibkonnaliikme omanduses olevas eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000**

Leibkonnaliikme omanduses olevas eluruumis elava rahvastiku osatähtsus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 79,9%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on XI kogumiku Tabel 54. Tavaleibkondade rahvastik elukoha, eluruumi tüübi ja eluruumi kasutamise aluse järgi, 2000.

**Teemakaart 3. Elanike arvust väiksema tubade arvuga eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000**

Elanike arvust väiksema tubade arvuga eluruumis elava rahvastiku osatähtsus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 43,9%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on 2000. aasta rahva ja eluruumide loenduse andmebaas.

**Teemakaart 4. Veevärgiga eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000**

Veevärgiga eluruumis elava rahvastiku osatähtsus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 87,6%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on 2000. aasta rahva ja eluruumide loenduse andmebaas.

**Teemakaart 5. Keskkütte või elekterküttega eluruumis elava rahvastiku osatähtsus haldusüksustes, 2000**

Keskkütte või elekterküttega eluruumis elava rahvastiku osatähtsus linnades ja valdades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 70,0%. Eraldi on sama näitaja esitatud väikesel maakondade kaardil.

Aluseks on 2000. aasta rahva ja eluruumide loenduse andmebaas.

**Teemakaart 6. Ühe leibkonnaga eluruumide osatähtsus maakondades ning leibkondade jaotus elukoha järgi, 2000**

Maakonna leibkondade jaotus elukoha järgi (2 gruppi: leibkondi linnades, leibkondi valdades) protsentides on esitatud iga maakonna taustal sektordiagrammina.

Ühe leibkonnaga eluruumide osatähtsus eluruumide koguarvus maakondades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 95,4%.

Aluseks on X kogumiku **Tabel 9**. Asustatud eluruumidega hooned, eluruumid, leibkonnad ja elanikud hoone asukoha ja liigi järgi, 2000 ja X kogumiku **Tabel 37**. Eluruumid asukoha, tüübi ja asustatuse järgi ning asustatud tavaeluruumid leibkondade arvu järgi, 2000.

**Teemakaart 7. Pereelamutes elavate leibkondade osatähtsus maakondades, 2000**

Pereelamutes elavate leibkondade osatähtsus maakondades protsendivahemike järgi on esitatud värvitooni tugevusega. Eesti keskmine on 28,7%.

Aluseks on X kogumiku **Tabel 40**. Asustatud eluruumid, leibkonnad ja elanikud eluruumi asukoha ja tüübi järgi, 2000.

Teemakaartidel 1–5 on kohaliku omavalitsuse piir (valla- ja linnapiir) tähistatud peene musta joonega ja maakonnapiir jämedama valge joonega. Veekogud (Võrtsjärv ja Peipsi järv) on valged.

## **Diagrams**

**Diagram 1. Population by type of dwelling, 2000**

Based on **Table 2**. Occupied conventional dwellings, households and inhabitants by type of dwelling, 2000.

**Diagram 2. Population by ethnic nationality and type of dwelling, 2000**

Based on **Table 3**. Population living in conventional dwellings by ethnic nationality and type of dwelling, 2000.

**Diagram 3. Population in counties by time of construction of the building, 2000**

Based on database of the 2000 Population and Housing Census.

Percentages are given for population the construction time of whose building is known.

**Diagram 4. Estonians and non-Estonians by time of construction of the building, 2000**

Based on **Table 7**. Estonians and non-Estonians living in conventional dwellings by type and time of construction of the building, 2000.

Percentages are given for population the construction time of whose building is known.

**Diagram 5. Population in Tallinn by proportion of rooms and inhabitants in dwelling, 2000**

Based on database of the 2000 Population and Housing Census.

**Diagram 6. Population by floor area of dwelling per inhabitant, 2000**

Based on **Table 73**. Population living in conventional dwellings by place of residence and floor area of dwelling per inhabitant, 2000 and database of the 2000 Population and Housing Census.

**Diagram 7. Population in cities and rural municipalities by comfort characteristics of dwelling, 2000**

Based on **Table 11**. Occupied conventional dwellings, households and inhabitants by type of building and comfort characteristics of dwelling, 2000.

**Diagram 8. Estonians and non-Estonians by comfort characteristics of dwelling, 2000**

Based on **Table 13**. Estonians and non-Estonians living in conventional dwellings by type of building and comfort characteristics of dwelling, 2000.

**Diagram 9. Population by employment or socio-economic status and floor area of dwelling per inhabitant, 2000**

Based on **Table 69**. Population by employment and socio-economic status, type of dwelling and floor area of dwelling per inhabitant, 2000.

**Diagram 10. Proportion of population living in dwellings equipped with central or electric heating by employment or socio-economic status, 2000**

Based on **Table 66**. Population of cities living in conventional dwellings by employment and socio-economic status, type and comfort characteristics of dwelling, 2000 and **Table 67**. Population of rural municipalities living in conventional dwellings by employment and socio-economic status, type and comfort characteristics of dwelling, 2000.

**Diagram 11. Households by time of construction of the building, 2000**

Based on **Table 5**. Occupied conventional dwellings, households and inhabitants by type and time of construction of the building, 2000.

Percentages are given for households the construction time of whose building is known.

**Diagram 12. Households by size and type of dwelling, 2000**

Based on **Table 23**. Households living in conventional dwellings by size and type of dwelling, 2000 and database of the 2000 Population and Housing Census.

Family dwelling includes also part of family dwelling and apartment includes also separate living rooms.

**Diagram 13. Average floor area of dwelling per household member by size of household, 2000**

Based on **Table 36**. Households living in conventional dwellings in cities by single or shared occupancy, size of household and floor area of dwelling per inhabitant, 2000, **Table 37**. Households living in conventional dwellings in rural municipalities by single or shared occupancy, size of household and floor area of dwelling per inhabitant, 2000 and database of the 2000 Population and Housing Census.

**Diagram 14. Occupied dwellings by number of rooms and inhabitants, 2000**

Based on **Table 14**. Occupied conventional dwellings by type, number of rooms and inhabitants, 2000.

**Diagram 15. Average number of rooms per inhabitant by number of rooms in dwelling, 2000**

Based on **Table 15**. Occupied conventional dwellings in cities by type, number of rooms and inhabitants, 2000, **Table 16**. Occupied conventional dwellings in rural municipalities by type, number of rooms and inhabitants, 2000 and database of the 2000 Population and Housing Census.

**Diagram 16. Households by size and comfort characteristics of dwelling, 2000**

Based on **Table 46**. Households living in conventional dwellings by comfort characteristics of dwelling and size of household, 2000.

**Diagram 17. Households by composition and floor area of dwelling per household member, 2000**

Based on **Table 30**. Households living in conventional dwellings by single or shared occupancy, composition of household and floor area of dwelling per inhabitant, 2000.

Percentages are given for households, which live in dwellings occupied by one household.

**Diagram 18. Households by composition and tenure status, 2000**

Based on **Table 42**. Households by composition, type and tenure status of dwelling, 2000.

Percentages are given for households, in case of which tenure status is known.

**Diagram 19. Proportion of households with children living in family dwellings by number of children aged under 18, 2000**

Based on database of the 2000 Population and Housing Census.

Family dwelling includes also part of family dwelling.

**Diagram 20. Households with children aged under 18 by number of children and comfort characteristics of dwelling, 2000**

Based on database of the 2000 Population and Housing Census.

## **Thematic maps**

### **Counties and cities of Estonia, 2000** (on the inner side of the front cover)

Map of administrative division of Estonia with the names, borderlines and areas of counties (15), and names of cities (42). Cities without municipal status are not marked on the map (in Lääne county — Lihula; in Valga county — Otepää; in Viljandi county — Abja-Paluoja and Karksi-Nuia; in Võru county — Antsla).

Based on **Table 2** (Census Publication I). De facto and usual resident population of administrative units by sex, 1989, 2000.

### **Rural municipalities of Estonia, 2000** (on the inner side of the back cover)

Map of administrative division of Estonia with the borders of counties and names and borders of rural municipalities (205). The names of towns which coincide with the names of rural municipalities are not marked on the map (in Pärnu county — Vändra town; in Rapla county — Kohila town and Märjamaa town).

Based on **Table 2** (Census Publication I). De facto and usual resident population of administrative units by sex, 1989, 2000.

### **Thematic map 1. Proportion of population living in family dwellings in administrative units, 2000**

Proportion of population living in family dwellings in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 30.2%. The same indicator has been presented separately on the small map of counties.

Based on **Table 40**. (Census Publication X) Occupied dwellings, households and inhabitants by location and type of dwelling, 2000.

### **Thematic map 2. Proportion of population living in dwellings owned by household member in administrative units, 2000**

Proportion of population living in dwellings owned by household member in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 79.9%. The same indicator has been presented separately on the small map of counties.

Based on **Table 54**. (Census Publication XI) Population of private households by place of residence, type and tenure status of dwelling, 2000

### **Thematic map 3. Proportion of population living in dwellings where the number of rooms is smaller than the number of inhabitants, in administrative units, 2000**

Proportion of population living in dwellings where the number of rooms is smaller than the number of inhabitants in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 43.9%. The same indicator has been presented separately on the small map of counties.

Based on database of the 2000 Population and Housing Census.

### **Thematic map 4. Proportion of population living in dwellings equipped with water supply system in administrative units, 2000**

Proportion of population living in dwellings equipped with water supply system in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 87.6%. The same indicator has been presented separately on the small map of counties.

Based on database of the 2000 Population and Housing Census.

### **Thematic map 5. Proportion of population living in dwellings equipped with central or electric heating in administrative units, 2000**

Proportion of population living in dwellings equipped with central or electric heating in cities and rural municipalities by percentage intervals has been presented by different shades of colour. The average of Estonia is 70.0%. The same indicator has been presented separately on the small map of counties.

Based on database of the 2000 Population and Housing Census.

### **Thematic map 6. Proportion of dwellings accommodating one household in counties and distribution of households by place of residence, 2000**

The distribution of households (2 groups: households in cities, households in rural municipalities) in counties by place of residence has been presented as a pie chart on the map of counties at the background of each county.

Proportion of dwellings accommodating one household in the total number of dwellings in counties by percentage intervals has been presented by different shades of colour. The average of Estonia is 95.4%.

Based on **Table 9**. (Census Publication X) Buildings containing occupied dwellings, dwellings, households and inhabitants by location and type of building, 2000 and **Table 37**. (Census Publication X) Dwellings by location, type and occupancy and occupied conventional dwellings by number of households, 2000.

***Thematic map 7. Proportion of households living in family dwellings in counties, 2000***

*Proportion of households living in family dwellings in counties by percentage intervals has been presented by different shades of colour. The average of Estonia is 28.7%.*

*Based on **Table 40.** (Census Publication X) Occupied dwellings, households and inhabitants by location and type of dwelling, 2000.*

*In thematic maps 1–5, the border of the local municipality (the border of the rural municipality and the border of the city) has been marked with a thin black line and the border of the county with a thicker white line. The bodies of water (Lake Võrtsjärv and Lake Peipus) are white.*

## Mõisted

Asustatud eluruum — eluruum, mis oli loendusmomendil vähemalt ühe isiku alaline elukoht.

Elamu — hoone, mille pinnast 50% või rohkem kasutatakse alaliseks elamiseks. Elamud on paljukorterilised elamud, ühepereelamud ja muud väikeelamud (vt hoone liik).

Elanike arv eluruumis — eluruumis alaliselt elavate isikute arv, sh eluruumist vähem kui aasta ajutiselt äraolevad isikud.

Elukoht (alaline elukoht) — haldusüksus või asula, kus asub eluruum, milles isik loenduse ajal alaliselt elas. Elukohaks loeti koht, kuhu isik kavatses jääda elama või kus ta oli elanud vähemalt ühe aasta (1989. aastal vähemalt kuus kuud). Isikul, kellel oli rohkem kui üks elukoht, loeti (põhi)elukohaks koht, kus elas tema leibkond. Õppimiskohas elavate kõrgkoolide, keskeri- ja teiste kutseõppeasutuste õpilaste elukohaks loeti õppimiskoha asukoha eluruum (mitte vanemate elukoht). Institutsioonis (hoolekandeesutused, kinnipidamisasutused jm) rohkem kui aasta elanud või sinna rohkem kui aastaks jäävate isikute elukohaks loeti institutsioon (1989. aastal oli ajapiiriks kuus kuud). Ajateenijate elukohaks loeti koht, kust nad ajateenistusse läksid. Loenduse ajal välisriigis viibinud Eesti Vabariigi diplomaatiliste ja konsulaaresinduste diplomaatilise personali ja nende leibkonnaliikmete elukohaks loeti nende elukoht Eestis. Kodutute elukohaks loeti asula, kus nad loendati.

Eluruum — aastaringseks elamiseks sobiv pereelamu, korter või muu omaette ruum. Peale selle loeti eluruumiks eluase, mis ei olnud alaliseks elamiseks kavandatud, kuid kus loendusmomendil elas alaliselt vähemalt üks isik. 2000. aasta loendusel jaotati eluruumid tavaeluruumideks, mittetavaeluruumideks, majutusruumideks ja institutsiooniruumideks. Viimaste puhul ei määratud kindlaks ruumide arvu, vaid nende inimeste arv, kes neis ruumides elasid.

- Tavaeluruum — pereelamu, osa pereelamust, korter või omaette tuba (toad). Loendati kõiki tavaeluruume, sõltumata sellest, kas seal loendusmomendil mõni isik asus või elas. Tavaeluruumid jaotati järgmiselt:
  - a. pereelamu — väikeelamu (sh taluelamu, kaksikelamuboks, ridaelamuboks või endine suvemaja, mis on kohandatud aastaringseks kasutamiseks), mis moodustab ühe eluruumi.
  - b. osa pereelamust — pereelamu on jaotatud mitmeks eluruumiks

(eraldi sissepääsud ja abiruumid või ainult eraldi köögid).

- c. korter — eluruum, mis on teistest eluruumidest ehituslikult isoleeritud ja võimaldab korraldada majapidamist (olemas abiruumid). Korteriks loeti ka kööktoad.
- d. omaette tuba (toad) — ühiselamu tüüpi majade isoleeritud tuba (toad), mida ei kasutatud loenduse ajal majutusruumina (nt erastatud tuba endises ühiselamus).

- Mittetavaeluruum (elamiseks kasutatav mitteeluruum) — mitmesugused elamiseks kohandatud ruumid (laohoone, veski, garaaz jne), suvemajad, mis ei sobi aastaringseks kasutamiseks, vagunelamud, haagiselamud, paatmajad, laevad, kui neis loendusmomendil elas alaliselt vähemalt üks leibkond. Reisijate majutusruume laevadel ja rongikupeedes eluruumiks ei loetud.
- Majutusruum — ühiselamu, hotelli, kampaingu, motelli, pansioni, võõrastemaja, spordi- ja puhkebaasi, puhkekodu, külalistemaja, turismitalu vms tuba (toad), mis on põhimõtteliselt ette nähtud ajutiseks kasutamiseks (leibkonnal puudub omandiõigus), kuid kus loendusmomendil elas alaliselt vähemalt üks isik.
- Institutsiooniruum — hoolekandeesutuse, haridusasutuse, tervishoiuasutuse, usuasutuse, kinnipidamisasutuse või muu institutsiooni ruum, kus loendusmomendil elas alaliselt vähemalt üks isik.

Eluruum puudub kodututel. Kodutu on isik, kes õõbis juhuslikes keldrites, trepikodades, soojusõlmedes, mahajäetud hoonetes, onnides, kodutute varjupaikades jms. Kodutuks ei loetud isikut, kes elas püsivalt mõnes elamiseks mitteettenähtud ruumis.

Erinevalt 2000. aasta loendusest sõltus 1989. aasta loendusel eluruumi tüüp sellest, kas eluruumis elas üks või mitu perekonda (või üksikut). Rahvastik jaotati 1989. aastal järgmiste eluruumi tüüpide järgi:

- Individuaalmaja — märgiti, kui ühe korteriga majas elas üks perekond (või üksik).
- Osa individuaalmajast — märgiti, kui kodanikule isikliku omandiõiguse alusel kuuluvas majas elas kaks või rohkem perekonda (või üksikut).

- Omaette korter — märgiti, kui korteris elas üks perekond (või üksik).
- Ühiskorter — märgiti, kui korteris elas rohkem kui üks perekond.
- Ühiselamu — märgiti, kui perekond (või üksik) elas ühiselamus (nt tööliste ja teenistujate ühiselamus, üliõpilaste ühiselamus, vanurite ja invaliidide internaatkodus jne).
- Muu ruum — märgiti, kui perekond (või üksik) elas alaliselt ruumis, mis ei olnud traditsioonilist tüüpi elamu (nt raudteevagun, onn jm).
- Allüürniku eluruum — märgiti, kui perekond (või üksik) üüris elamispinda individuaalmajas, korteris või toas elavatele isikutelt.

Kui perekond (või üksik) elas individuaalmajas või omaette korteris, kuid kasutas ainult osa maja või korteri pinnast ja ülejäänud osa üüris välja, siis loeti, et see perekond (või üksik) elas individuaalmajas või omaette korteris.

Eluruumi kasutamise alus — tavaeluruumis elavad leibkonnad ja leibkonnaliikmed jaotati eluruumi kasutamise aluse järgi nii:

- Omanik — eluruumis elab leibkond, mille üks liige on eluruumi omanik.
- Elamuühistu liige — leibkonnas on vähemalt üks elamuühistu (-kooperatiivi) liige.
- Üürnik — leibkonnal on üüri- või allüürileping eluruumi kasutamise kohta või muu seaduses ette nähtud alus (sh suuline kokkulepe).
- Muu — leibkonnal puudub eluruumi kasutamiseks alus või pole kasutamise alust võimalik määrata.

Eluruumi omanik — tavaeluruumid jaotati omaniku põhjal järgmiselt:

- Riik — omanik on riigiasutus või riiklik organisatsioon (fond).
- Kohalik omavalitsus — omanik on linn (linnaosa) või vald.
- Eesti elanik — omanik on isik, kelle alaline elukoht on Eestis.
- Välisriigi elanik — omanik on isik, kelle alaline elukoht asub väljaspool Eesti Vabariiki.
- Elamuühistu — omanik on elamuühistu (-kooperatiiv). Siia ei kuulu korteriühistu liige, kes on eluruumi omanik.
- Muu — omanik on näiteks äriühing, kirik või muu mittetulundusühing, sihtasutus, põllumajandusühistu jms.

Eluruumi pind — tubade ja abiruumide (köök, esik, garderoob, hall, tualett, sahv, vaheruum, vannituba, panipaik, veranda, sisseehitatud seinakapid) põrandapinna summa. Lodžasid, rõdusid, terrasse (s.o lahtisi pindu), keldreid, garaaže, trepikodasid ja muid üldkasutatavaid ruume paljukorterilistes elamutes eluruumi pinda hulka ei arvestatud.

Eluruumi pind elaniku kohta esitati 2000. aastal vaid tavaeluruumis elava rahvastiku jaoks, 1989. aastal peale selle ka ühiselamute alaliste elanike jaoks. Allüürnike jaoks 1989. aastal eluruumi pinda elaniku kohta ei esitatud.

Eluruumi keskmine pind elaniku kohta saadakse asustatud eluruumide kogupinna jagamisel elanike koguarvuga eluruumides, mille pind on teada.

Eluruumi tehnovarustatus — köögi (kööginiši), veevärgi, kanalisatsiooni, sooja vee, vanni (duši), sauna, veekloseti, elektri, gaasi, kesk- ja elekterkütte olemasolu eluruumis. Kui eluruumis oli mingi tehnovarustuse liik olemas, aga avarii tõttu, elanike soovil või nende maksejõuetuse tõttu välja lülitatud, siis loeti see ikkagi olemasolevaks. Kui aga tehnosüsteem oli pikka aega (aasta ja rohkem) välja lülitatud toite lõppemise tõttu (näiteks endise majandi keskasula katlamaja enam ei tööta), siis see tehnovarustuse liik puudub (vastuseks märgiti “ei ole”). 2000. aastal esitati eluruumi tehnovarustatus vaid tavaeluruumis elava rahvastiku kohta, 1989. aastal peale selle ka ühiselamute alaliste elanike kohta. Allüürnike jaoks 1989. aastal eluruumi tehnovarustatust ei esitatud.

- Köök — vähemalt nelja ruutmeetri suurune või kahe meetri laiune püsiseintega eraldatud ruum, mis on varustatud toiduvalmistusseadmetega ja kus üldjuhul on ka aken.
- Kööginišš — eluruumis on toidu valmistamiseks sisustatud osa toast (näiteks statsionaarne pliit kööktoas või (aknata) alla nelja ruutmeetri suurune ajakohase küttekolde ja valamuga nišš) või köögi ja toa vaheline sein puudub (näiteks on lõhutud).
- Veevärk — “on” märgiti juhul, kui külm vesi tuli eluruumi torustiku kaudu välisvõrgust ja kasutati veekraani. 1989. aastal loeti eluruum veevärgiga varustatuks ka siis, kui majas oli eraldi asuv köök, kuhu oli paigaldatud veekraan veevärgi jaotusvõrgust.
- Kanalisatsioon — “on” märgiti juhul, kui heitveed ja fekaalid juhiti torustiku kaudu tsentraalsesse või lokaalsesse kanalisatsioonivõrku või kogumis(imb)kaevu.

- Soe vesi — “on” märgiti juhul, kui seda saadi eluruumis asuvast kuumaveekraanist. Kas soe vesi tuli välisvõrgust või eluruumisisesest veesoojendist, ei olnud oluline.
- Vann (dušš) — “on” märgiti juhul, kui eluruumis asus statsionaarselt paigaldatud ja kanalisatsiooniga ühendatud vann või dušikabiin. Sooja vee saamise viis ei olnud oluline.
- Saun — “on” märgiti nii siis, kui saun oli korterisse, ühepereelamusse või muusse väikeelamusse sisse ehitatud, kui ka siis, kui saun asus omaette hoonena ühepereelamu või muu väikeelamu krundil (s.o väljaspool eluruumi). Paljukorteriliste elamute keldritesse ehitatud ühissaunad arvesse ei läinud.
- Veeklosett — “on” märgiti juhul, kui fekaalid uhuti veevärgist tuleva veega kanalisatsiooni.
- Elekter — “on” märgiti juhul, kui eluruumil oli ööpäevaringne ühendus alalise elektrienergiaallikaga.
- Gaas — “on” märgiti nii võrgu- kui ka vedel(balloon)gaasi olemasolu korral, olenemata selle kasutusviisist. 1989. aastal loeti eluruum gaasiga varustatuks siis, kui oli olemas põrandale paigaldatav gaasipliit. Nendes ühisköögiga koridori tüüpi majades, kus köögis on statsionaarne gaasipliit, loeti gaasiga varustatuks kõik eluruumid (toad).
- Statsionaarne elektripliit — märgiti, kui oli olemas põrandale paigaldatav elektripliit. Eluruum loeti statsionaarse elektripliidiga varustatuks ka siis, kui majas oli eraldi asuv köök, kuhu oli paigaldatud põrandal asuv elektripliit. See tehnovarustuse liik märgiti vaid 1989. aastal.
- Keskküte — “on” märgiti juhul, kui küte tuli eluruumi torustiku kaudu kas tsentraalsest või lokaalsest katlamajast, samuti korterisisesest gaasisoojendi ja väikesemõõdulise gaas- või tahkekütuse baasil töötava katla kasutamise korral. Eluruumis võib samal ajal olla mitu küttesüsteemi (keskküte, elekterküte, ahiküte); “on” märgiti siis, kui keskküte on valdav (enim kasutatav) küttesüsteem.
- Elekterküte — “on” märgiti juhul, kui soojatootmiseks kasutati eluruumis asuvaid statsionaarseid elektrikütteseadmeid (elektriküttekihi) ja see oli valdav küttesüsteem.

Eluruumi tüüp — vt eluruum.

Hoone — maapinnaga püsivalt ühendatud välispiirete, katuse ja siseruumidega ehitis. Vaadeldi vaid tavaeluruumidega hooneid.

Hoone ehitusaeg — ajavahemik, kuhu kuulub hoone ametliku vastuvõtmise (ekspluatatsiooni andmise) aasta. Kui hoone oli hiljem ümber ehitatud, laiendatud vms, märgiti ehitusajaks ikkagi ajavahemik, kuhu jäi hoone esialgse vastuvõtmise aasta (v.a juhul, kui hoone oli täielikult hävinud ja hiljem taastatud). “Ehitus pooleli” märgiti hoone puhul, mille mõnda ruumi kasutati loendusmomendil juba alaliseks elamiseks, kuid kohalik omavalitsus ei olnud andnud hoone kasutusluba. 2000. aastal esitati hoone ehitusaeg vaid tavaeluruumides elava rahvastiku kohta, 1989. aastal peale selle ka ühiselamute alaliste elanike kohta. Allüürnike jaoks 1989. aastal hoone ehitusaega ei esitatud.

Hoone liik — tavaeluruumidega hooned jaotati elamuteks ja mitte-elamuteks. Elamute hulka kuuluvad paljukorteriline elamu, ühepereelamu ja muu väikeelamu.

- Paljukorteriline elamu (kortermaja) — vähemalt kolmest korterist koosnev elamu, millel on sissepääs üldjuhul ühisest esikust, koridorist või trepikojast.
- Ühepereelamu — algselt ühele perele projekteeritud ja ehitatud elamu, kus võib elada ka mitu leibkonda ning mis on korteriteks jaotamata. Siia kuuluvad ka taluelamud ja endised suvemajad, mis on kohandatud aastaringseks elamiseks. Kui pereelamu oli ümber ehitatud kaheks isoleeritud korteriks, märgiti vastus “muu väikeelamu”. Ühepereelamu mõiste erineb mõistest “pereelamu”, mis tähistab eluruumi tüüpi ning hõlmab ka ridaelamuboksi ja kaksikelamuboksi. Hoone liik “ühepereelamu” hõlmab ainult korteriteks jaotamata ühepereelamut.
- Muu väikeelamu on
  - a. kaksikelamu (paarismaja), mille moodustavad kaks kõrvuti asetsevat krundil küljети kokkuehitatud pereelamut (erandina ka ühel krundil asuv kahe sissepääsuga elamu — kahepereelamu);
  - b. ridaelamu, mis koosneb vähemalt kolmest tulemüüri või katusega ühendatud eraldi sissekäiguga pereelamust (ridaelamuboksist);
  - c. pereelamu, kuhu on ehitatud kaks korterit.

- Mitte-elamu on
  - a. hoone, mille kasulikust pinnast kasutatakse elamiseks hinnanguliselt alla 50%;
  - b. majutushoone — hoone, mille pinnast kasutatakse majutamiseks vähemalt 50% (nt ühiselamu, hotell, kämping, motell, võõrastemaja, spordi- ja puhkebaas, puhkekodu, külalistemaja, turismitalu vms). Arvesse läksid ainult need majutushooned, kus paiknes tavaeluruume.
  - c. muu mitte-elamu, mis oli loendusmomendil vähemalt ühe isiku alaline elukoht.

Isiku staatus leibkonnas — tavaleibkondade püsielanikud jaotati vastavalt nende staatusele leibkonnas isikuteks, kes kuuluvad mõnda perekonnatuuma (“laps”, “abikaasa”, “vabaabielu-partner”, “üksikvanem”) ning isikuteks, kes ei kuulu ühessegi perekonnatuuma (“üksik”, “muu staatus”).

- Laps — isik (sõltumata vanusest ja seaduslikust perekonnaseisust) loeti oma vanematega (vanemaga) ühes perekonnatuumas olevaks lapseks siis, kui tal endal polnud samas leibkonnas partnerit (abikaasat, vabaabielupartnerit) või last (lapsi). Lasteks loeti nii bioloogilised lapsed kui ka lapsendatud lapsed, kuid mitte kasulapsed.
- Abikaasa — isik, kellel on samas perekonnatuumas seaduslik abikaasa.
- Vabaabielupartner — isik, kellel on samas perekonnatuumas vastassoost vabaabielu-partner.
- Üksikvanem — isik, kellel on samas perekonnatuumas lapsi, kuid ei ole partnerit (abikaasa, vabaabielupartner).
- Üksik — isik, kelle leibkonnas ei ole rohkem püsielanikke (s.o ühe liikmega leibkond).
- Muu staatus — isik, kes ei ole üksik, kuid kes ei kuulu ühessegi perekonnatuuma.

Lapse vanem — isik, kellel endal või kelle partneril (abikaasa, vabaabielupartner) on samas leibkonnas laps.

Leibkond — ühisel aadressil elavad isikud, keda seob ühine kodune majapidamine (ühine eelarve ja ühine toit). Üksinda elav isik loeti omaette leibkonnaks. Leibkonna liikmete vaheline sugulus- või hõimlussuhe ei olnud tingimata vajalik. Kui isik elas kellegagi ühises eluruumis, kuid oli omaette leival ja eraldi eelarvel, siis loeti ta omaette leibkonnaks. Käesolevas kogumikus käsitletakse leibkonnana tavaleibkondi. Institutsioonid (hoolekandeesutused, kinnipidamisasutused jm)

alaliselt elavad isikud ja kodutud jäävad vaatluse alt välja.

Leibkonna koosseis — tavaleibkonnad jaotati koosseisu järgi kolme järgmisse rühma: mittepereleibkonnad, ühepereleibkonnad ja mittepereleibkonnad.

- Mittepereleibkond — leibkond, mis ei sisalda perekonnatuuma (nt ühe liikmega leibkond; vanavanem ja lapselaps; õde ja vend; suguluses mitteolevad isikud).
- Ühepereleibkond — leibkond, mis sisaldab ühte perekonnatuuma ja kus võib lisaks elada ka isikuid, kes ei kuulu perekonnatuuma (nn “muud isikud”).
- Mittepereleibkond — leibkond, mis sisaldab kahte või enam perekonnatuuma ning kus võib lisaks elada ka isikuid, kes ei kuulu perekonnatuuma.

Leibkonna suurus — leibkonna püsielanike arv.

Linnade rahvastik — omavalitsuslike linnade rahvastik. Vallasiseste linnade rahvastik on esitatud valdade koosseisus.

Loendusmoment — loendusega kogutavate andmete fikseerimise kuupäev ja kellaaeg. 2000. ja 1989. aasta rahvaloenduse loendusmomendid olid vastavalt 31. märtsil 2000 kell 00.00 ja 12. jaanuaril 1989 kell 00.00.

Majanduslikult aktiivne rahvastik (tööjõud) — (15-aastased ja vanemad või teadmata vanusega) isikud, kes loetud loenduseelsel nädalal (20.–26. märts 2000) töötavaks või töötuks või kes olid ajateenijad.

Majanduslikult mitteaktiivne rahvastik (majanduslikult passiivne rahvastik) — 15-aastased ja vanemad isikud, kes loenduseelsel nädalal (20.–26. märts 2000) ei soovinud või ei saanud mingil põhjusel töötada, kuid keda ei loetud töötuks või ajateenijaks, ning kõik alla 15-aastased isikud.

- (Üli-)õpilane — isik, kes omandas üld-, kutse- või erialaharidust (riiklike õppekavadega fikseeritud ja organisatsiooniliselt tagatud haridus) formaalharidus-süsteemis, s.t üldhariduskoolis, kutseõppes või kõrgkoolis. Riigikaitsealistes õppeasutustes õppija märgiti ajateenijaks (juhul kui õppimine oli võrdsustatud ajateenistusega). Akadeemilisel puhkusel viibija klassifitseeriti vastavalt tegevusele, millega ta puhkuse ajal oli hõivatud.
- Pensionär — isik, kellele oli määratud vanadus-, rahva-, töövõimetus- või toitja-kaotuspension.
- Muu mittetöötav — eraldi väljatoomata põhjuste tõttu mittetöötav isik, sealhulgas

- a. kodune — isik, kes ei otsinud tööd ega olnud valmis kahe nädala jooksul tööle asuma ning kes enamik aega tegeles tasustamata majapidamis-ülesannetega ja/või hoolitses laste ning teiste pereliikmete eest, näiteks lapsehoolduspuhkusel olija (süü ei kuulunud rasedus- ja sünnituspuhkusel olija) või muu kodumajapidamises tegev isik.
- b. politsei- või kinnipidamisasutuses viibinu, sh politsei arestimajas, politsei arestikambri, vanglas, eeluurimisel või pagulaste vastuvõtu-punktis olnu;
- c. isik, kes ei näinud töötamiseks põhjust või elas oma varandusest (rantjee);
- d. isik, kes soovinuks töötada, kuid oli mingil põhjusel töötamisest loobunud;
- e. isik, kes hetkel ei otsinud tööd ega olnud valmis järgmise kahe nädala jooksul tööle asuma, sest õppis täiendusõppekursustel;
- f. puude või pikaajalise haiguse tõttu mittetöötav isik.

Perekond — 2000. aasta loendusel käsitleti perekonnana perekonnatuuma. Perekonnatuum koosneb kahest või enamast samas leibkonnas elavast isikust, kes on omavahel seotud kui abielupartnerid, vabaabielupartnerid või kui vanem ja laps. Iga leibkonnaliige võib kuuluda vaid ühte perekonnatuuma. Perekonnatuumaks võivad olla

- seaduslikus abielus olev paar või vabaabielupaar ilma lasteta (lasteta paar);
- seaduslikus abielus olev paar või vabaabielupaar koos lastega (lastega paar; lapsed ei pea olema ühised);
- lapsega (lastega) üksikvanem.

Perekonnatuum ei saa koosneda rohkem kui kahe järjestikuse põlvkonna esindajatest. Kui leibkond koosnes kolme (või enama) põlvkonna liikmetest, kelle vahel olid vanemlussuhted (näiteks laps, tema ema ja vanaema), siis moodustus perekonnatuum kahest nooremast põlvkonnast. Konkureerivate suhete korral eelistati:

- abielu/kooselu suhteid vanemlussuhetele,
- vanemlussuhete hulgas eelistati nooremate põlvkondade vahelisi suhteid.

1989. aasta loendusel mõisteti perekonna all kooselavaid isikuid, kes on seotud suguluse või hõimluse ja ühise eelarvega.

Perekonnatuum — vt perekond.

Rahvastik (alaline rahvastik) — loendusmomendil antud haldusüksuses või asulas kohalolevad alalised elanikud ja lisaks sealt vähem kui aasta ajutiselt

äraolevad elanikud. 1989. aasta loendusel loeti ajutiseks äraolekuks kuni 6 kuud.

Rahvus — märgiti isiku enesemääramise järgi. Isikul oli õigus tunnista end selle rahvuse liikmeks, kellega ta tundis end kõige tihedamini etniliselt ja kultuuriliselt seotud olevat. Lapse rahvuse ütlesid vanemad. Kui lapse ema ja isa olid eri rahvusest ja vanematel oli raskusi lapse rahvuse üle otsustamisel, eelistati ema rahvust.

Tavaeluruum — vt eluruum.

Teadmata — tabeli rida või veerg “teadmata” hõlmab juhtumeid, kus vastus on loenduslehele märkimata või on märgitud vastus, mida ei ole võimalik üheselt tõlgendada.

Tubade arv eluruumis — toaks loeti elutuba, magamistuba, lastetuba, kabinet, ärklituba, söögituba jne. Kui toa ja köögi vahel püsiseina ei olnud (näiteks lõhutud), loeti köök toa osaks. Kööki, esikut, tualettruume, vannituba, sahvrit, saunaruume jm abiruume tubade hulka ei arvatud. Kööktuba ja tuba ühiselamu tüüpi hoones (kui tuba kasutati eraldi eluruumina) loeti samuti toaks. Tubasid, mida kasutati ainult äri- või tööeesmärkidel, ei arvestatud.

Keskmine tubade arv elaniku kohta saadakse asustatud eluruumide tubade koguarvu jagamisel elanike koguarvuga eluruumides, mille tubade arv on teada.

Tööalane staatus — isiku staatus põhitöökohal. Tööalase staatuse järgi jaotatakse töötavad isikud järgmiselt.

- Palgatöötaja — isik, kes
  - a. oli loenduseelsel nädalal hõivatud täis- või osaaajatööga asutuse, ettevõtte või muu tööandja heaks, mille eest tasuti kas rahas või natuuras (pole oluline, kas see töökoht oli ametlikult registreeritud või mitte) või
  - b. oli tööandjaga lepingulises töövahekorras (tööleping, töövõtu-leping, avaliku teenistuse seadusest tulenev töövahekord, suuline kokku-lepe tööandjaga), kuid puudus ajutiselt töölt.

Palgatöötajateks loeti ka ohvitserid ja allohvitserid, samuti juhutööga elatist teenivad isikud.

- Ettevõtja-tööandja, talupidaja palgalise tööjõuga — isik,
  - a. kellel oli oma ettevõtte või teenindus-vahendus-/äritegevus (töökoda, büroo, pood vms), kus kasutati pidevalt vähemalt üht palgatud töötajat (polnud oluline, kas ettevõtte oli registreeritud või mitte) või

- b. kes pidas talu, kus pidevalt töötas vähemalt üks palgatud töötaja (peale oma pereliikmete). «Mitmemehefirmade» kaasomanikud loeti palgatöötajatega ettevõtjateks või palgatöötajateta ettevõtjateks sõltuvalt sellest, kas nende firmad kasutasid palgatöötajõudu või mitte.
- Üksikettevõtja, vabakutseline, talupidaja ilma palgalise töötajata — isik, kes
  - a. tegeles oma töö saaduse (teenuse või toote) müümisega ja kellel olid saaduse valmistamiseks vajalikud tootmisvahendid ning kes ei kasutanud palgalist töötajõudu või
  - b. oli üheks partneriks partnerettevõttes, mis ei kasutanud palgalist töötajõudu või
  - c. pidas talu, milles ei töötanud pidevalt palgalist töötajõudu (peale oma pereliikmete) või
  - d. oli vabakutseline töötaja, s.t loominguiline töötaja, kes ei olnud kellegi palgal (näiteks kunstnik, kirjanik vms). Vabakutseliseks ei loetud juhutööga leiba teenivat palgalist.
- Muu töötaja:
  - a. Palgata töötaja pereettevõttes, talus — isik, kes töötas loenduseelisel nädalal ilma otsese palgata pereettevõttes (või talus, mis kuulus mõnele leibkonnaliikmetest) ning kes sai selle eest osa ettevõtte või talu sissetulekust või hüvedest.
  - b. Tulundusühistu liige — isik, kes oli niisuguse ühistu liige, mille eesmärk on saada ainelist tulu ja jaotada see liikmetele.
  - c. Ajateenija — isik, kes oli ajateenija Eesti Vabariigi kaitseväes, mereväes või piirivalves, samuti relvajõududega võrdsustatud kohustuslikus tegevteenistuses. Ajateenijaiks loeti riigikaitsealistes õppeasutustes õppijad (juhul, kui nende õppimine oli võrdsustatud ajateenistusega). Üleajateenijad ja ohvitserkoosseis loeti töötavaks.

Töötaja — isik, kes loenduseelisel nädalal (20.–26. märts 2000)

- tegi tööd tasu eest lepingu või kokkuleppe alusel, kaasa arvatud töö naturas

- makstava tasu eest (toit, peavari, kütus vms); töö, kus tasu maksti honorari, lepingulise tasu või preemia, samuti tükitöö korras tasustatud töö, jootraha, komisjonitasu või tööandjaga kokkulepitud käibeprotsendi kujul tasustatud töö;
- tegi tööd oma ettevõttes või talus, erapraksis;
- tegi tööd tasu eest või ilma tasuta mõne teise leibkonnaliikme ettevõttes või talus;
- tegi osatööajaga tööd;
- tegeles mittelegaalselt sissetulekut andva tegevusega;
- puudus töölt ajutiselt.

Loenduseelisel nädalal loeti töötavaks kõik, kes töötasid vähemalt tunni või puudusid töölt ajutiselt. Kui tegelik töötamine ei langenud vormilise töösuhtega kokku, lähtuti tegelikust töötamisest.

Töötü — isik, kelle puhul oli loenduseelisel nädalal (20.–26. märts 2000) üheaegselt täidetud kolm järgmist tingimust:

- oli ilma tööta,
- oli nelja viimase nädala jooksul aktiivselt tööd otsinud,
- oli töö leidmisel valmis kahe nädala jooksul tööle asuma.

Aktiivseks töötamiseks loeti kõik töö leidmiseks või ettevõtluse alustamiseks reaalselt ettevõetud sammud (nt riiklikus või mõnes muus töövahendusbüroos registreerumine, võimalike tööandjatega kohtumine, kuulutamine ajalehes või vastamine kuulutustele, töösooviavalduste saatmine tööandjatele, info hankimine vabade töökohtade kohta tuttavatelt või sugulastelt, ajutise töötajõu värbamise kohtades (turud vms) käimine, ettevõtte/talu registreerimine, selle alustamiseks tegevusloa või laenu taotlemine, ettevõtte/talu rajamiseks maa, ruumide, seadmete, töötajate vms otsimine). Tööleasujad, kellel oli olemas kokkulepe töö alustamiseks, kuid kes ei olnud veel tööle asunud, loeti töötuks.

Vabaabielus — isik, kes ei ole seaduslikus abielus, kuid on enesemääramise järgi oma elukaaslasega (partneriga) abielulistes suhetes ning kellel on elukaaslasega ühine elukoht ja leibkond. Vaadeldakse ainult vastassoolistel suhteid.

Valdade rahvastik — valdade asulates (vallasisesed linnad, alevid, alevikud ja külad) elav rahvastik.

Vanus — isiku vanus on arvestatud täisaastates. Vanuse esitamise aluseks on 2000. aastal 31. märts. Alla üheaastaste laste vanuseks on 0 aastat.

## Definitions

Age — person's age has been given in full years as at 31 March 2000. The age of children under 1 year of age is 0 years.

Area of dwelling — the total floor area of rooms and secondary rooms (kitchen, hall, toilet, pantry, interspace, bathroom, storage room, veranda, built-in cupboards). The area of balconies and terraces (i.e. open spaces), cellars, garages, corridors and other commonly used rooms was not included in the total area of dwellings in apartment buildings.

In 2000 the area of dwelling per inhabitant was recorded only with respect to population living in conventional dwellings, in 1989, in addition to the aforementioned population, also with respect to persons residing permanently in hostels. In 1989 the area of dwelling per inhabitant was not recorded with respect to subtenants.

The average floor area of dwelling per inhabitant is received by dividing the total floor area of occupied dwellings by the total number of inhabitants of dwellings the area of which is known.

Building — construction permanently connected to the ground, enclosed within external walls, covered with roof and containing rooms. The Census covered the buildings containing conventional dwellings.

Cohabitant — person who is not legally married but who in his/her opinion has a marriage relationship and a common place of residence and common household with his/her partner. Only relationships between partners of opposite sex are considered.

Comfort characteristics of dwelling — availability of kitchen (kitchenette), water supply system, sewage disposal system, hot water, bath (shower) sauna, flush toilet, electricity, gas, central and electric heating in the dwelling. If the dwelling was equipped with some type of comfort characteristics but it had been switched off due to an emergency, at the request made by inhabitants or because the inhabitants were unable to pay for the service, it was still regarded as available. However, if these facilities had been switched off for a longer time (one year and longer) because of the termination of supplying them with energy (e.g., the boiler house of the former co-operative in the central settlement was no longer operating), then this type of facility was regarded as missing (the answer was "no"). In 2000 comfort characteristics of dwelling were recorded only with respect to population living in conventional dwellings, in 1989, in addition to the aforementioned population, also with respect to persons living permanently in hostels. In 1989

comfort characteristics of dwelling were not recorded with respect to subtenants.

- Kitchen — a room of at least four square metres or two metres wide that has been separated with permanent walls and equipped for the preparation of meals and, as a rule, it also has a window.
- Kitchenette — part of a room equipped for the preparation of meals (e.g., a fixed oven in a kitchenette or a (windowless) niche of less than four square metres with a contemporary stove and sink) or the permanent wall between the room and the kitchen is missing (e.g., it has been torn down).
- Water supply system — "yes" was recorded in case cold water came into the dwelling through pipes from an external central network and a water tap was used. In 1989 dwelling was regarded as equipped with water supply system also when in the building there was a separate kitchen with a water tap connected to water distribution network.
- Sewage disposal system — "yes" was recorded in case wastewater and faeces emptied into a piped system connected to a public central or a local sewage disposal system or septic tank.
- Hot water — "yes" was recorded in case it was received through the hot water tap in the dwelling. Whether hot water was received from an external network or from the boiler in the dwelling was insignificant.
- Bath (shower) — "yes" was recorded in case the dwelling was equipped with a fixed bath or shower that was connected to a sewage disposal system. The way of receiving hot water was insignificant.
- Sauna — "yes" was recorded in case sauna had been built into the apartment, one-family house or any other small residential building, also in case sauna was in a separate building in the grounds of one-family house or of any other small residential building (i.e. outside the dwelling). Public saunas built into the cellars of apartment buildings were not included here.
- Flush toilet — "yes" was recorded in case faeces went into a sewage disposal system with the water coming from a water supply system.
- Electricity — "yes" was recorded in case the dwelling was connected to a

permanent source of electrical energy twenty-four hours a day.

- Gas — "yes" was recorded in the case of the availability of either network or liquid gas (cylinder), irrespective of its way of use. In 1989 dwelling was regarded as equipped with gas in case there was a gas stove placed on the floor. In corridor type of houses where several families shared the kitchen, all dwellings (rooms) were regarded as equipped with gas in case there was a fixed gas stove in the kitchen.
- Fixed electric oven — "yes" was recorded in case there was an electric stove placed on the floor. Dwelling was regarded as equipped with a fixed electric stove in case there was a separate kitchen in the building where an electric stove had been placed on the floor. This type of comfort characteristics was recorded only in 1989.
- Central heating — "yes" was recorded in case the dwelling was heated through a heat supply pipeline either from a central or a local boiler house, also in the case of the use of a gas heater or a small boiler working with gas or solid fuel. There can be several heating systems in the dwelling at the same time (central heating, electric heating, stove heating); "yes" was recorded in case the central heating was the main (mostly used) heating system.
- Electric heating — "yes" was recorded in case fixed electric heating equipment (electric heaters) was used in the dwelling and it was the main heating system.

Composition of household — private households were distributed by composition into three groups: non-family households, one-family households and multi-family households.

- Non-family household — household, which does not comprise a family nucleus (e.g., one-person household; grandparent and grandchild; sister and brother; persons who have no blood relationship between them).
- One-family household — household, which comprises one family nucleus and which may also include persons who do not belong to the family nucleus (so-called "other persons").
- Multi-family household — household, which comprises two or more family nuclei and which may also include persons who do not belong to the family nucleus.

Conventional dwelling — see Dwelling.

Dwelling — family dwelling, apartment or other separate room suitable for all-the-year-round

habitation. In addition, rooms, which were not designed for permanent habitation, were considered to be dwellings if at the Census moment at least one person was residing there permanently. In 2000 dwellings were classified as conventional dwellings, non-conventional dwellings, accommodation rooms and rooms in institution. In the case of the latter, not the number of rooms but the number of persons living in these rooms was specified.

- Conventional dwelling — family dwelling, part of the family dwelling, apartment or separate living room(s). The Census covered all conventional dwellings regardless of whether some person lived there or not at the Census moment. Conventional dwellings were distributed as follows:

- a. family dwelling — a small residential building (including farmhouse, housing unit of a row house and semi-detached house or former summer cottage that has been rebuilt for all-the-year-round habitation), which comprises one dwelling.
- b. part of the family dwelling — family house is divided into several dwellings (with separate entrances and secondary rooms or only separate kitchens).
- c. apartment — dwelling (with secondary rooms) that is entirely isolated from other dwellings and allows running a household. Also kitchenettes are regarded as apartments.
- d. separate living room(s) — isolated room(s) in hostel-type houses that were not used as accommodation rooms at the time of Census (e.g. privatised room in a former hostel).

- Non-conventional dwelling (non-dwelling used for habitation) — these comprise miscellaneous rooms converted for human habitation (storage, mill, garage, etc.), summer cottages that are not suitable for all-the-year-round habitation, caravans, trailers, boathouses, ships, if at the Census moment at least one household was living there permanently. Accommodation rooms for passengers on board the ships or in train compartments were not regarded as dwellings.
- Accommodation room — room in a hostel, hotel, camping grounds, motel, boarding house, sports and recreation centre, rest

*home, guesthouse, tourism farm, etc. which, in principle, is meant for temporary use (the household has no property right) but was a permanent place of residence of at least one person at the Census moment.*

- *Room in an institution — room in a social welfare institution, educational institution, health care institution, institution for worship, custodial or any other institution, which was a permanent place of residence of at least one person at the Census moment.*

*Dwelling is missing in the case of the homeless. Homeless person is a person who spent the night in a random cellar, staircase, boiler room, abandoned building, shack, shelter for the homeless, etc. Person who lived permanently in a room not intended for habitation was not regarded as homeless.*

*Different from the 2000 Census, the type of dwelling in 1989 depended on whether the dwelling was inhabited by one or many families (or single persons). With respect to inhabitants, dwellings were classified as follows:*

- *Private house was recorded in case one family (or single person) was living in a one-dwelling house.*
- *Part of private house was recorded in case two or more families (or single persons) were living in a house belonging to a person on the basis of the right of ownership.*
- *Separate apartment was recorded in case one family (or single person) was living in the apartment.*
- *Communal apartment was recorded in case more than one family were living in the apartment.*
- *Hostel was recorded in case a family (or single person) was living in a hostel (e.g., in a student hostel, workers' hostel, boarding house for the old and disabled people, etc.).*
- *Other dwelling was recorded in case a family (or single person) was permanently living in an other than traditional type of dwelling (e.g., in a railway wagon, shack, etc.).*
- *Subtenant's dwelling was recorded in case a family (or single person) rented a dwelling from a person living in a private house, apartment or room.*

*Family (or a single person), who was living in a private house or in a separate apartment but*

*used only part of the area of the house or apartment and rented out the remaining part, was regarded as living in a private house or separate apartment.*

*Economically active population (labour force) — persons (aged 15 years and older and persons whose age was unknown) who were considered employed or unemployed or who were conscripts in the week preceding the Census (20–26 March 2000).*

*Economically inactive population — persons aged 15 years and older who did not want to or could not work for some reason but who were not considered as unemployed or who were not conscripts in the week preceding the Census (20–26 March 2000), as well as all under 15-year-old persons.*

- *Student (pupil) — person who was acquiring general, vocational or professional education in formal educational system (officially recognised and organisationally ensured education), i.e. in institutions of general education, vocational education or higher education. Students studying in military educational institutions were recorded as being conscripts. Persons on academic leave were classified according to the activity they were engaged with during the leave.*
- *Pensioner — person who had been granted an old-age pension, public pension, disability pension or survivor's pension.*
- *Not working for other reasons — persons not working for other reasons, including:*
  - a. homemaker — person who was not seeking work and was not ready to start work within two weeks and was engaged in unpaid household duties and/or took care of the children and other members of the family, e.g., persons on parental leave (persons on pregnancy and childbirth leave were not included) or other persons responsible for the care of the household;*
  - b. persons in police or penal institutions, including police houses of detention, detention cells, prisons, pre-trial imprisonment or refugee camps;*
  - c. persons who saw no reason for working or who lived off their property (rentiers);*

- d. *persons who would have wanted to work but who for some reason had given up seeking work;*
- e. *persons who were not seeking work and who were not ready to start work within the next two weeks as he/she attended training courses;*
- f. *persons not working due to disability or long-term illness.*

Employed person — *person who during the week preceding the Census (20–26 March 2000)*

- *worked for payment under contract or according to an agreement, including work for payment in kind (for food, housing, fuels, etc.); work the payment for which was given in the form of royalties, contract payments or premium pays, as well as payment for piecework, tips, commission or as percentage of sales in compliance with the agreement made with the employer;*
- *worked in own enterprise or farm, private practice;*
- *worked for pay or without pay in an enterprise or farm of another member of the household;*
- *worked part-time;*
- *dealt with activity providing illegal income;*
- *was temporarily absent from work.*

*All persons who had worked at least one hour or were temporarily absent from work during the week preceding the Census were regarded as having worked. If actual working did not coincide with the formal work relationship, then it was proceeded from the actual working.*

Employment status — *person's employment status at his/her main place of work. Employed persons are distributed by the employment status into four groups:*

- *Salaried employee — person who*
  - a. *in the week preceding the Census was engaged in full- or part-time job for the institution, enterprise or any other employer, for which he/she was remunerated either by money or in kind (it was insignificant whether the place of work was officially registered or not), or*
  - b. *had a contractual relationship with the employer (employment contract, contract of agreement, work relationship based on the Public Service Act, oral agreement with the employer) but was temporarily absent from work.*

*Officers and persons earning their living with casual work were also regarded as salaried employees.*

- *Entrepreneur-employer, farmer with salaried employees — person who*
  - a. *had his/her own enterprise or service-mediation-/business activity (workshop, bureau, shop, etc.), where the services of at least one salaried employee were used (it was insignificant whether the enterprise had been registered or not), or*
  - b. *who operated a farm where at least one salaried employee worked on a permanent basis (except for own members of the family). Co-owners of a firm were regarded as entrepreneurs with salaried employees or entrepreneurs without salaried employees depending on whether their firms used salaried employees or not.*
- *Self-employed person, freelancer, farmer without salaried employees — person who*
  - a. *was engaged in selling of his/her work product (service or commodity) and who owned the necessary means of production and did not use salaried employees, or*
  - b. *was partner in a partnership which did not employ salaried employees or*
  - c. *operated a farm where no salaried employees worked on a permanent basis (except for own members of the family) or*
  - d. *was a freelancer, i.e. creative worker who was not employed by anybody (e.g., artist, writer, etc.). Employee who earned his/her living by doing casual work was not regarded as freelancer.*
- *Other employee*
  - a. *Contributing family worker in a family enterprise, farm — person who in the week preceding the Census worked without direct payment in a family enterprise (or farm which was owned by one of the members of the family) and who in return received part of the income or benefits of the enterprise or farm.*
  - b. *Member of the commercial association — person who was a member in an association the objective of which was to receive*

and distribute the material income between its members.

- c. *Conscript* — person who served in the armed forces, in the navy or at the borders of the Republic of Estonia, as well as in active compulsory service considered equal to military service. Students in military educational institutions were recorded as conscripts. Officers and persons staying overtime in military service were regarded as employed.

*Ethnic nationality* — the ethnic nationality named by the person himself/herself was recorded. The person had the right to consider himself/herself to be a member of that ethnic nationality who he/she felt to be most closely connected to ethnically and culturally. Parents determined the ethnic nationality of their children. If the child's mother and father were of different ethnic nationalities and the parents had difficulties in determining the ethnic nationality of their child, the ethnic nationality of the mother was preferred.

*Family* — in the 2000 Census the family nucleus was regarded as a family. The family nucleus consists of two or more persons living in the same household who are related as husband and wife, as cohabiting partners or as parent and child. Each household member can be a member of only one family nucleus. Family nucleus can be:

- married couple or cohabiting couple without children (couple without children);
- married couple or cohabiting couple with children (couple with children; children need not be common);
- lone parent with child(ren).

Family nucleus cannot consist of more than two successive generations. If the household consisted of three (or more) generations with parental relationship between them (e.g., child, his/her mother and grandmother) the family nucleus was formed of the two youngest generations. In the case of competitive relationship:

- marital/cohabitation relationship was preferred to parental relationship,
- of parental relationship, the relationship between the younger generations was preferred.

In the 1989 Census family referred to persons who lived together and who were related by blood or by marriage and shared a joint budget.

*Family nucleus* — see Family.

*Household* — persons who live together at the same address and are linked by a common use of all available household facilities (shared budget and shared food). A person living alone is also considered a separate household. Blood relationship or relationship by marriage between household members was not necessarily required. If a person shared a dwelling with some other person but bought food himself/herself and had a separate budget, then he/she was considered a separate household. In this publication, only private households are regarded as households. Persons living permanently in an institution (social welfare, penal institutions, etc.) and homeless persons are excluded.

*Moment of Census* — the date and the time referring to the data collected in the Census. The moment of the 2000 Population Census was on 31 March 2000 at 00.00. The moment of the 1989 Population Census was on 12 January 1989 at 00.00.

*Number of rooms in the dwelling* — room is a living room, bedroom, nursery, study, attic, dining room, etc. If a permanent wall between a room and a kitchen was missing (for example, it had been torn down) then kitchen was regarded as part of the room. Kitchen, entrance hall, toilet, bathroom, pantry, sauna rooms and other secondary rooms were not counted as rooms. Kitchenette and a room in a building of a hostel type (if the room was used separately as a dwelling) were counted as rooms. Rooms that were used only for business or work purposes did not count as rooms.

The average number of rooms per inhabitant is received by dividing the total number of rooms in occupied dwellings by the total number of persons living in dwellings the number of rooms of which is known.

*Occupied dwelling* — dwelling was occupied if at the Census moment it was a permanent place of residence of at least one person.

*Owner of dwelling* — conventional dwellings were distributed by the owner of dwelling as follows:

- State — dwelling is owned by a state agency or national organisation (fund).
- Local government — dwelling is owned by a city (city district) or rural municipality.
- Person residing in Estonia — the permanent place of residence of the owner of the dwelling is in Estonia.
- Person residing in a foreign country — the permanent place of residence of the owner of the dwelling is outside of the Republic of Estonia.

- *Dwelling association* — the owner of the dwelling is a dwelling association (dwelling co-operative). Member of the apartment association who is an owner of the dwelling is not taken into account here.
- *Other* — the owner of the dwelling is, for example, a commercial undertaking, church or any other non-profit institution, foundation, etc.

Parent — person who or whose partner (spouse, cohabitant) has a child in the same household.

Person's status in the household — residents of private households were distributed by their status in the household into persons who belong to some family nucleus ("child", "spouse", "cohabitant", "lone parent") and persons who do not belong to any family nucleus ("person living alone", "other status").

- *Child* — person (regardless of age and legal marital status) was considered to be a child belonging to the same family nucleus as his/her parents (parent) if he/she had not a partner (spouse, cohabitant) and child(ren) in the same household. Both biological and adopted children were recorded as children, but not foster children.
- *Spouse* — person who has a legal spouse living in the same family nucleus.
- *Cohabitant* — person who has a cohabiting partner of an opposite sex living in the same family nucleus.
- *Lone parent* — person who has child(ren) but no partner (spouse, cohabitant) living in the same family nucleus.
- *Person living alone* — person who has no other residents living in his/her household (i.e., one-person household).
- *Other status* — person who is not living alone but is not a member of any family nucleus.

Place of residence (permanent/usual place of residence) — administrative unit or settlement, where the dwelling in which the person lived permanently at the time of the Census, was located. The permanent place of residence was the place where the person intended to live or where he/she had lived at least one year (in 1989 at least 6 months). For the person who had more than one place of residence, the permanent place of residence was the place where his/her household was living. The permanent place of residence of university students and of pupils of professional secondary or other vocational educational institutions living in the study area was the dwelling where the studies took place (not the place of residence of parents). An institution was considered

the permanent place of residence of persons, who had lived in an institution (social welfare institutions, prisons, etc.) for more than a year or who would stay there for more than a year. (In 1989 the time limit was 6 months.) The permanent place of residence of persons in military service was the place where they had departed from for military service. The permanent place of residence of the diplomatic staff of diplomatic missions and consular posts of the Republic of Estonia and their household members who had been in a foreign country at the time of the Census was their place of residence in Estonia. The permanent place of residence of homeless persons was the settlement where they had been enumerated.

Population (usual resident population) — permanent residents present in a certain administrative unit or settlement at the moment of Census and residents temporarily absent from there for less than a year. In 1989 the time limit of temporary absence was up to 6 months.

Population of cities — population of city municipalities. The population of cities without municipal status has been included in the population of rural municipalities.

Population of rural municipalities — population living in settlements of rural municipalities (cities without municipal status, towns, small towns and villages).

Residential building — building at least 50% of the area of which is used for permanent habitation. Residential buildings are apartment buildings, one-family houses and other small residential buildings (see Type of building).

Size of household — the number of usual residents of the household.

Tenure status — households and household members living in conventional dwellings were distributed by the tenure status as follows:

- *Owner* — one member of the household living in the dwelling is its owner.
- *Member of dwelling association* — there is at least one member of the dwelling association (dwelling co-operative) in the household
- *Tenant* — the household has a contract of tenancy for using the dwelling or any other basis provided by law (incl. oral agreement).
- *Other* — any kind of basis for using the dwelling is missing or the basis for the use cannot be determined.

Time of construction of the building — the period, which includes the year of official completion of the building (taken into exploitation). If the building had undergone reconstruction, extension etc., the

period containing the year of first completion of the building was still recorded as construction time (excluding the case when the building had been completely destroyed and then rebuilt). "Uncompleted building" was recorded in the case of a building some rooms of which were already used for permanent habitation although the local government had not given the permission to use it. In 2000 the time of construction of the building was recorded only with respect to population living in conventional dwellings, in 1989, in addition to the aforementioned, also with respect to persons residing permanently in hostels. In 1989 the time of construction of the building was not recorded with respect to subtenants.

Type of building — buildings containing conventional dwellings were distributed into residential buildings and non-residential buildings. Residential buildings include apartment buildings, one-family houses and other small residential buildings.

- Apartment building — consists of at least three apartments that generally have an entrance in a common entrance hall or corridor.
- One-family house — residential building originally designed and built for one family where also many households may live and which is not divided into apartments. Also farmhouses and former summer cottages rebuilt for all-the-year-round habitation are included here. If the one-family house had been rebuilt into two isolated apartments, the answer "other small residential building" was recorded. The concept of "one-family house" differs from the concept of "family dwelling". The latter indicates the type of dwelling and includes also the housing unit of row house and semi-detached house. One-family house as the type of building includes only one-family house that is not divided into apartments.
- Other small residential building is:
  - a. a semi-detached residential building, which consists of two family houses situated in two neighbouring grounds and built together by their sides (as an exception also a residential building with two entrances locating in the same grounds — two-family house);
  - b. a row house which consists of at least three family houses (one housing unit

- a. of a row house) with separate entrances and connected with one another by a fire wall or a roof;
  - c. family house with two apartments built inside of it.
- Non-residential building is:
    - a. building, approximately less than 50% of the useful area of which is used for habitation;
    - b. accommodation building — building, at least 50% of the useful area of which is used for accommodation (e.g., hostel, hotel, camping grounds, motel, boarding house, sports and recreation centre, rest home, guest house, tourism farm, etc.). Only accommodation buildings containing dwellings were counted.
    - c. other non-residential building which at the Census moment was a permanent place of residence of at least one person.

Type of dwelling — see Dwelling.

Unemployed — person in the case of whom the following three conditions were fulfilled at the same time during the week preceding the Census (20–26 March 2000):

- he/she was unemployed,
- he/she had been actively seeking work during the past four weeks,
- in the case of finding work he/she was ready to start working within two weeks.

Active job seeking comprised all steps taken to find a job or start entrepreneurship (e.g., registration at a public or any other employment exchange, meeting possible employers, placing or answering newspaper advertisements, applications to employers, acquiring information about vacant jobs from acquaintances or relatives, going to places of recruitment of temporary labour (markets, etc.), registration of an enterprise/farm, applying for a permit or a loan to start activity, looking for land, rooms, equipment, employees, etc. to establish one's own enterprise/farm). Waiting for an earlier agreed work to start was also considered to be equal to job seeking.

Unknown — the table's row or column "unknown" includes cases where the answer has not been recorded in the questionnaire or the answer that has been recorded is ambiguous.
